Our users are all over the world, and users in many countries all value privacy. Our DevOps-SRE simulating exam's global system of privacy protection standards has reached the world's leading position. No matter where you are, you don't have to worry about your privacy being leaked if you ask questions about our DevOps-SRE Exam Braindumps or you pay for our DevOps-SRE practice guide by your credit card. It is safe for our customers to buy our DevOps-SRE learning materials!

The PeopleCert DevOps-SRE Certification Exam is designed to test a candidate's knowledge and expertise in the field of DevOps and Site Reliability Engineering (SRE). PeopleCert DevOps Site Reliability Engineer (SRE) certification exam is aimed at professionals who are involved in the development, deployment, and maintenance of software applications, and who are looking to enhance their skills and expertise in the field of DevOps and SRE.

## Pass The Exam On Your First Try With Peoplecert DevOps-SRE Exam Dumps

Although a lot of products are cheap, but the quality is poor, perhaps users have the same concern for our DevOps-SRE learning materials. Here, we solemnly promise to users that our product error rate is zero. Everything that appears in our products has been inspected by experts. In our DevOps-SRE learning material, users will not even find a small error, such as spelling errors or grammatical errors. It is believed that no one is willing to buy defective products, so, the DevOps-SRE study materials have established a strict quality control system.

The PeopleCert DevOps-SRE Exam is a valuable certification program for IT professionals who want to master the principles and practices of DevOps and SRE. It provides a comprehensive understanding of automation, monitoring, and incident response, which are critical for organizations that rely on technology. PeopleCert DevOps Site Reliability Engineer (SRE) certification is suitable for those who are responsible for designing, implementing, and managing complex IT systems, as well as those who are interested in learning about the latest trends and best practices in the field of DevOps and SRE.

The PeopleCert DevOps-SRE Certification Exam is a valuable certification for IT professionals who want to prove their skills in SRE and DevOps. PeopleCert DevOps Site Reliability Engineer (SRE) certification covers a range of topics, including SRE principles, DevOps culture, incident management, automation, and monitoring. PeopleCert DevOps Site Reliability Engineer (SRE) certification is globally recognized and provides a framework for IT professionals to improve their skills and knowledge in SRE and DevOps.

## Peoplecert PeopleCert DevOps Site Reliability Engineer (SRE) Sample Questions (Q60-Q65):

### NEW QUESTION # 60

Which of the following features of Puppet Labs is described as the ability locate identify, and group cloud nodes?

- A. Delivery
- **B. discovery**
- C. Insight
- D. Provisioning

**Answer: B**

#### NEW QUESTION # 61

An organization has been adopting DevOps practices including Continuous Integration and Continuous Delivery pipelines. How would implementing SRE improve DevOps for this organization?

- A. DevOps engineers will be forced to become SREs
- B. Infrastructure as Code will force organizations to move to the cloud
- C. Continuous delivery pipelines become redundant
- **D. Continuous delivery pipelines will go further and extend into production**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SRE strengthens DevOps by adding reliability engineering, SLOs, error budgets, and production-focused automation. One key improvement is that the CI/CD pipeline extends safely into production using automated, tested, reliable deployment mechanisms.

The Site Reliability Engineering Book, "Release Engineering" chapter states:

"SRE complements DevOps by creating safe pathways for automated production deployments through engineering practices such as canarying, automation, and release gates." The SRE Workbook adds:

"SRE helps mature DevOps pipelines so they can operate safely in production, enabling continuous delivery to reach all the way through deployment." Why the other options are incorrect:

\* B SRE makes CD more necessary, not redundant

\* C SRE does not replace DevOps engineers

\* D IaC does not require moving to the cloud

Thus, the correct answer is A.

#### NEW QUESTION # 62

Which of the following BEST describes the relationship between service level objectives and service level indicators?

- A. Service level objectives are the measurements for the service level indicators
- B. Service level objectives are the performance metrics for service level indicators
- **C. Service level indicators are the measurements for the service level objectives**
- D. Service level indicators are the performance targets for service level objectives

**Answer: C**

#### NEW QUESTION # 63

A team has exceeded their error budget by 10% in a particular month.

Give an example of what should happen next as a consequence.

- A. The Error Budget is reviewed to determine if it was realistic for the product or timeline
- B. The Error Budget is extended for another month to determine if this breach was an anomaly
- C. The error budget is ignored in subsequent months as it is creating the wrong kind of behavior
- **D. Sprint planning may only pull post-mortem action items from the backlog**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

When a team exceeds its error budget, SRE practice requires applying error budget policies that restrict feature releases and shift focus toward reliability improvement. The idea is to prevent further degradation of user experience and ensure the service meets the agreed reliability targets.

The Site Reliability Engineering Book, Chapter "Service Level Objectives," states:

"If the service exceeds its error budget, all new feature launches or risky changes are halted until reliability returns to acceptable levels. Engineering work should be directed toward addressing the causes of the budget overrun." This aligns with option A, which describes a reliability-focused response during sprint planning. Limiting sprint planning to post-mortem action items and reliability improvements is a direct application of error budget policies.

Additional guidance from the SRE Workbook:

"Error budget burn should directly influence decision-making. When the budget is exhausted, the team must focus on remediation work rather than new features." Why the other options are incorrect:

\* B Reviewing the error budget's realism can be done periodically, but it is not the immediate consequence of a breach.

\* C Extending the error budget invalidates its purpose and is discouraged.

\* D Ignoring the error budget contradicts the entire SRE model and Google's official guidance.

Therefore, A is the only correct answer.

### NEW QUESTION # 64

When outages are repetitive and similar they become a form of toll.

Which of the following describes the MOST compelling reason to adopt advanced technologies and artificial intelligence (AI)?

- A. To increase reliability and achieve perfect MTRS
- B. To increase the mean time to repair services (MTTR)
- **C. To increase reliability by reducing MTTR and MTRS**
- D. To increase the mean time to restore services (MTRS)

**Answer: C**
