2026 Latest Actual4dump DOP-C02 PDF Dumps and DOP-C02 Exam Engine Free Share: <https://drive.google.com/open?id=17YeV-WNaGQXtU4SIZAYhIYYdDnioT7Kz>

For our PDF version of our DOP-C02 practice materials has the advantage of printable so that you can print all the materials in DOP-C02 study engine to paper. Then you can sketch on the paper and mark the focus with different colored pens. This will be helpful for you to review the content of the materials. If you are busy with work and can't afford a lot of spare time to review, you can choose the other two versions of our DOP-C02 Exam Questions: Software and APP online versions.

Amazon DOP-C02 practice materials are highly popular in the market compared with other materials from competitors whether on the volume of sales or content as well. All precise information on the AWS Certified DevOps Engineer - Professional DOP-C02 Exam Questions and high accurate questions are helpful. To help you have a thorough understanding of our DOP-C02 training prep, free demos are provided for your reference.

Pass Guaranteed Quiz Amazon - DOP-C02 - AWS Certified DevOps Engineer - Professional –The Best Test Dumps Demo

Will you feel nervous in facing the real exam? DOP-C02 Soft test engine can stimulate the real exam environment, so that you can know what the real exam is like, you're your nerves will be reduced, at the same time, your confidence will be strengthened. In addition, DOP-C02 Soft test engine can install in more than 200 computers, and it supports MS operating system, and it has two modes for practicing. We offer you free demo for DOP-C02 Soft test engine, you can have a try before buying, so that you can have a better understanding of what you are going to buy. You can enjoy free update for 365 days, and the update version for DOP-C02 exam materials will be sent to you automatically.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q201-Q206):

NEW QUESTION # 201

A company has a search application that has a web interface. The company uses Amazon CloudFront, Application Load Balancers (ALBs), and Amazon EC2 instances in an Auto Scaling group with a desired capacity of 3. The company uses prebaked AMIs. The application starts in 1 minute. The application queries an Amazon OpenSearch Service cluster. The application is deployed to multiple Availability Zones. Because of compliance requirements, the application needs to have a disaster recovery (DR) environment in a separate AWS Region. The company wants to minimize the ongoing cost of the DR environment and requires an RTO and an RPO of under 30 minutes. The company has created an ALB in the DR Region. Which solution will meet these requirements?

- A. Create a new CloudFront distribution in the DR Region and add the new ALB as an origin. Use Amazon Route 53 DNS for Regional failover. Copy the AMI to the DR Region. Create a launch template and an Auto Scaling group with a desired capacity of 3 in the DR Region. Reconfigure the OpenSearch Service cluster as a Multi-AZ with Standby deployment. Ensure that the standby nodes are in the DR Region.
- B. Add the new ALB as an origin in the CloudFront distribution. Configure origin failover functionality. Copy the AMI to the DR Region. Create a launch template and an Auto Scaling group with a desired capacity of 3 in the DR Region. Create a new OpenSearch Service cluster in the DR Region. Set up cross-cluster replication for the cluster.
- **C. Add the new ALB as an origin in the CloudFront distribution. Configure origin failover functionality. Copy the AMI to the DR Region. Create a launch template and an Auto Scaling group with a desired capacity of 0 in the DR Region. Create a new OpenSearch Service cluster in the DR Region. Set up cross-cluster replication for the cluster.**
- D. Create a new CloudFront distribution in the DR Region and add the new ALB as an origin. Use Amazon Route 53 DNS for Regional failover. Copy the AMI to the DR Region. Create a launch template and an Auto Scaling group with a desired capacity of 0 in the DR Region. Reconfigure the OpenSearch Service cluster as a Multi-AZ with Standby deployment. Ensure that the standby nodes are in the DR Region.

Answer: C

NEW QUESTION # 202

A company is performing vulnerability scanning for all Amazon EC2 instances across many accounts. The accounts are in an organization in AWS Organizations. Each account's VPCs are attached to a shared transit gateway. The VPCs send traffic to the internet through a central egress VPC. The company has enabled Amazon Inspector in a delegated administrator account and has enabled scanning for all member accounts.

A DevOps engineer discovers that some EC2 instances are listed in the "not scanning" tab in Amazon Inspector. Which combination of actions should the DevOps engineer take to resolve this issue? (Choose three.)

- A. Associate the target EC2 instances with instance profiles that grant permissions to communicate with AWS Systems Manager.
- B. Configure EC2 Instance Connect for the EC2 instances that Amazon Inspector is not scanning.
- C. Create a managed-instance activation. Use the Activation Code and the Activation ID to register the EC2 instances.
- **D. Grant inspector:StartAssessmentRun permissions to the IAM role that the DevOps engineer is using.**
- **E. Verify that AWS Systems Manager Agent is installed and is running on the EC2 instances that Amazon Inspector is not scanning.**
- **F. Associate the target EC2 instances with security groups that allow outbound communication on port 443 to the AWS Systems Manager service endpoint.**

Answer: D,E,F

NEW QUESTION # 203

A company uses AWS CDK and CodePipeline with CodeBuild to deploy applications. The company wants to enforce unit tests before deployment; deployment proceeds only if tests pass.

Which steps enforce this? (Select TWO.)

- A. Update CodeBuild commands to run tests then deploy, add --require-approval any-change flag.
- B. Create tests that use cdk diff and fail if any resource changes are detected.
- **C. Create tests with AWS CDK assertions module, using template.hasResourceProperties assertions.**
- D. Update CodeBuild commands to run tests then deploy, add --rollback true to cdk deploy.
- **E. Update CodeBuild build commands to run tests then deploy, set OnFailure to ABORT.**

Answer: C,E

Explanation:

- * Running unit tests in the build phase and aborting on failure (OnFailure=ABORT) prevents deployment if tests fail.
- * AWS CDK assertions module provides programmatic unit tests against synthesized templates (Option D).
- * The --rollback flag relates to CloudFormation stack rollback, not test gating.
- * The --require-approval flag controls manual approvals, not test outcomes.
- * cdk diff checks for changes but is not a unit test and may not catch logical errors.

NEW QUESTION # 204

A company wants to use a grid system for a proprietary enterprise in-memory data store on top of AWS. This system can run in multiple server nodes in any Linux-based distribution. The system must be able to reconfigure the entire cluster every time a node is added or removed. When adding or removing nodes an /etc.

/cluster/nodes config file must be updated listing the IP addresses of the current node members of that cluster.

The company wants to automate the task of adding new nodes to a cluster.

What can a DevOps engineer do to meet these requirements?

- A. Put the file nodes config in version control. Create an AWS CodeDeploy deployment configuration and deployment group based on an Amazon EC2 tag value for the cluster nodes. When adding a new node to the cluster update the file with all tagged instances and make a commit in version control. Deploy the new file and restart the services.
- B. Create a user data script that lists all members of the current security group of the cluster and automatically updates the /etc/cluster/. nodes config. Tile whenever a new instance is added to the cluster.
- C. Create an Amazon S3 bucket and upload a version of the /etc./cluster/nodes config file Create a crontab script that will poll for that S3 file and download it frequently. Use a process manager such as Monit or system, to restart the cluster services when it detects that the new file was modified. When adding a node to the cluster edit the file ' s most recent members Upload the new file to the S3 bucket.
- D. Use AWS OpsWorks Stacks to layer the server nodes of that cluster. Create a Chef recipe that populates the content of the ' etc./cluster/nodes config file and restarts the service by using the current members of the layer. Assign that recipe to the Configure lifecycle event.

Answer: D

Explanation:

You can run custom recipes manually, but the best approach is usually to have AWS OpsWorks Stacks run them automatically.

Every layer has a set of built-in recipes assigned each of five lifecycle events-Setup, Configure, Deploy, Undeploy, and Shutdown.

Each time an event occurs for an instance, AWS OpsWorks Stacks runs the associated recipes for each of the instance ' s layers, which handle the corresponding tasks.

For example, when an instance finishes booting, AWS OpsWorks Stacks triggers a Setup event. This event runs the associated layer ' s Setup recipes, which typically handle tasks such as installing and configuring packages

NEW QUESTION # 205

A company deploys an application on on-premises devices in the company's on-premises data center. The company uses an AWS Direct Connect connection between the data center and the company's AWS account.

During initial setup of the on-premises devices and during application updates, the application needs to retrieve configuration files

from an Amazon Elastic File System (Amazon EFS) file system. All traffic from the on-premises devices to Amazon EFS must

remain private and encrypted. The on-premises devices must follow the principle of least privilege for AWS access. The company's DevOps team needs the ability to revoke access from a single device without affecting the access of the other devices. Which

combination of steps will meet these requirements? (Select TWO.)

- A. Use the amazon-efs-utils package to mount the EFS file system.
- B. Create an IAM user that has an access key and a secret key for all devices. Attach the AmazonElasticFileSystemClientReadWriteAccess policy to the IAM user. Configure the AWS CLI on the on-premises devices to use the IAM user's access key and secret key.
- C. Use the native Linux NFS client to mount the EFS file system.
- D. Create an IAM user that has an access key and a secret key for each device. Attach the AmazonElasticFileSystemFullAccess policy to all IAM users. Configure the AWS CLI on the on- premises devices to use the IAM user's access key and secret key.

- E. Generate certificates for each on-premises device in AWS Private Certificate Authority. Create a trust anchor in IAM Roles Anywhere that references an AWS Private CA. Create an IAM role that trusts IAM Roles Anywhere. Attach the AmazonElasticFileSystemClientReadWriteAccess to the role. Create an IAM Roles Anywhere profile for the IAM role. Configure the AWS CLI on the on-premises devices to use the aws_signing_helper command to obtain credentials.

Answer: A,E

NEW QUESTION # 206

.....

In this age of anxiety, everyone seems to have great pressure. If you are better, you will have a more relaxed life. DOP-C02 guide materials allow you to increase the efficiency of your work. You can spend more time doing other things. Our study materials allow you to pass the DOP-C02 exam in the shortest possible time. You will stand at a higher starting point than others. Why are DOP-C02 Practice Questions worth your choice? I hope you can spend a little time free downloading our demo of our DOP-C02 exam questions, then you will know the advantages of our DOP-C02 study materials!

DOP-C02 Pass4sure Pass Guide: <https://www.actual4dump.com/Amazon/DOP-C02-actualtests-dumps.html>

Once your company has related business about Amazon DOP-C02 Pass4sure Pass Guide you will be the NO.1, At first, you may know little about the DOP-C02 certification, then, you can visit the official website for some detail information or you can inquiry our customer service through online chat or email, Our DOP-C02 vce braindumps will boost your confidence for taking the actual test because the pass rate of our preparation materials almost reach to 98%.

Windows, Mac, iOS, Android, and Linux support this AWS Certified DevOps Engineer - Professional (DOP-C02) practice exam, Professor Schniederjans has also served as a consultant and trainer to a variety of business and government agencies, DOP-C02 such as Dow North America, Ralston Purina Corporation, and the Ontario Hydro Electro Corporation.

Fast and Effective Preparation with Amazon DOP-C02 Exam Questions

Once your company has related business about Amazon you will be the NO.1, At first, you may know little about the DOP-C02 certification, then, you can visit the official website for DOP-C02 Test Assessment some detail information or you can inquiry our customer service through online chat or email.

Our DOP-C02 vce braindumps will boost your confidence for taking the actual test because the pass rate of our preparation materials almost reach to 98%, Hope you pass exam 100% for sure.

Trump card, quality.
