## Dumps NCP-US-6.5 Reviews | NCP-US-6.5 Reliable Braindumps Book

There are some loopholes or systemic problems in the use of a product, which is why a lot of online products are maintained for a very late period. The NCP-US-6.5 test material is not exceptional also, in order to let the users to achieve the best product experience, if there is some learning platform system vulnerabilities or bugs, we will check the operation of the NCP-US-6.5 quiz guide in the first time, let the professional service personnel to help user to solve any problems. The NCP-US-6.5 prepare torrent has many professionals, and they monitor the use of the user environment and the safety of the learning platform timely, for there are some problems with those still in the incubation period of strict control, thus to maintain the NCP-US-6.5 quiz guide timely, let the user comfortable working in a better environment.

### Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q103-Q108):

#### NEW QUESTION # 103

What is the most efficient way of enabling users to restore their files without administrator intervention in multiple Files shares?

- A. Assign the same Category to all FSVMs and adding that Category to a single Protection Policy in PC.
- B. Click Enable next to the name of the share in Manage Recovery Settings from Data Lens.
- C. Add all FSVMs to a Consistency Group within a single asynchronous Protection Domain in PE.
- **D. Click Enable Self Service Restore in the Edit wizard for each share in Shares tab from Files Console.**

**Answer: D**

Explanation:

Nutanix Files allows users to restore their files from the snapshots taken by the protection policy. A protection policy is a set of rules that defines how often snapshots are taken, how long they are retained, and where they are replicated. A protection policy can be applied to one or more file shares. To enable users to restore their files without administrator intervention, the administrator must enable the Self Service Restore option for each share in the Files Console. This option adds a hidden folder named .snapshot in each share, which contains all the snapshots taken by the protection policy. Users can access this folder and browse the snapshots to find and restore their files. The administrator can also configure the permissions and quota for the .snapshot folder. Reference: Nutanix

### NEW QUESTION # 104

An administrator has planned to copy any large files to a Files share through the RoboCopy tool. While moving the data, the copy operation was interrupted due to a network bandwidth issue. Which command option resumes any interrupted copy operation?

- **A. robocopy with the /z option**
- B. robocopy with the /r option
- C. robocopy with the /c option
- D. robocopy with the /s option

**Answer: A**

Explanation:

Nutanix Files, part of Nutanix Unified Storage (NUS), provides CIFS (SMB) shares that can be accessed by Windows clients. RoboCopy (Robust File Copy) is a Windows command-line tool commonly used to copy files to SMB shares, such as those provided by Nutanix Files. The administrator is copying large files to a Files share using RoboCopy, but the operation was interrupted due to a network bandwidth issue. The goal is to resume the interrupted copy operation without restarting from scratch.

Analysis of Options:

\* Option A (robocopy with the /c option): Incorrect. The /c option is not a valid RoboCopy option.

RoboCopy options typically start with a forward slash (e.g., /z, /s), and there is no /c option for resuming interrupted copies.

\* Option B (robocopy with the /s option): Incorrect. The /s option in RoboCopy copies subdirectories (excluding empty ones) but does not provide functionality to resume interrupted copy operations. It is used to define the scope of the copy, not to handle interruptions.

\* Option C (robocopy with the /z option): Correct. The /z option in RoboCopy enables "restartable mode," which allows the tool to resume a copy operation from where it left off if it is interrupted (e.g., due to a network issue). This mode is specifically designed for copying large files over unreliable networks, as it checkpoints the progress and can pick up where it stopped, ensuring the copy operation completes without restarting from the beginning.

\* Option D (robocopy with the /r option): Incorrect. The /r option in RoboCopy specifies the number of retries for failed copies (e.g., /r:3 retries 3 times). While this can help with transient errors, it does not resume an interrupted copy operation from the point of interruption-it retries the entire file copy, which is inefficient for large files.

Why Option C?

The /z option in RoboCopy enables restartable mode, which is ideal for copying large files to a Nutanix Files share over a network that may experience interruptions. This option ensures that if the copy operation is interrupted (e.g., due to a network bandwidth issue), RoboCopy can resume from the point of interruption, minimizing data retransmission and ensuring efficient completion of the copy.

Exact Extract from Microsoft Documentation (RoboCopy):

From the Microsoft RoboCopy Documentation (available on Microsoft Docs):

"/z: Copies files in restartable mode. In restartable mode, if a file copy is interrupted, RoboCopy can resume the copy operation from where it left off, which is particularly useful for large files or unreliable networks." Additional Notes:

\* Since RoboCopy is a Microsoft tool interacting with Nutanix Files SMB shares, the behavior of RoboCopy options is standard and not specific to Nutanix. However, Nutanix documentation recommends using tools like RoboCopy with appropriate options (e.g., /z) for reliable data migration to Files shares.

\* Nutanix Files supports SMB features like Durable File Handles (as noted in Question 19), which complement tools like RoboCopy by maintaining session state during brief network interruptions, but the /z option directly addresses resuming the copy operation itself.

:

Microsoft RoboCopy Documentation, Section: "RoboCopy Command-Line Options" (Microsoft Docs).

Nutanix Files Administration Guide, Version 4.0, Section: "Data Migration to Nutanix Files" (Nutanix Portal).

### NEW QUESTION # 105

An administrator needs to scale out an existing Files instance. Based on the Company's requirements, File instance has four FSVMs configured and needs to expand to six.

How many additional Client IP addresses and Storage IP addresses does the administrator require to complete this task?

- **A. 2 Client IPs and 2 Storage IPs**
- B. 3 Client IPs and 2 Storage IPs
- C. 3 Client IPs and 3 Storage IPs

- D. 2 Client IPs and 3 Storage IPs

**Answer: A**

Explanation:

To scale out an existing Files instance, the administrator needs to add one Client IP and one Storage IP for each additional FSVM. Since the Files instance needs to expand from four FSVMs to six FSVMs, the administrator needs to add two Client IPs and two Storage IPs in total. The Client IPs are used for communication between the FSVMs and the clients, while the Storage IPs are used for communication between the FSVMs and the CVMs. Reference: Nutanix Files Administration Guide, page 28; Nutanix Files Solution Guide, page 7

#### **NEW QUESTION # 106**

What is the minimum and maximum file size limitations for Smart Tiering?

- A. 64 KiB minimum and 15 TiB maximum
- B. 128 IOB minimum and 5 TiB maximum
- **C. 64 KiB minimum and 5 TiB maximum**
- D. 128 KiB minimum and 13 TiB maximum

**Answer: C**

Explanation:

Smart Tiering is a feature that allows Files to tier data across different storage tiers based on the file size and access frequency. Smart Tiering supports files with a minimum size of 64 KiB and a maximum size of 5 TiB2. References: Nutanix Files Administration Guide2

#### **NEW QUESTION # 107**

An administrator has been directed to configure Volumes to Nutanix's best practices for security. What should the administrator do to be compliant?

- A. Enable at-rest encryption on Volume Groups.
- **B. Configure Volume Groups to use CHAP.**
- C. Use data services IP for external host connectivity.
- D. Segment iSCSI traffic to a physically separate network.

**Answer: B**

Explanation:

Nutanix Volumes is a feature that allows users to create and manage block storage devices (volume groups) on a Nutanix cluster. Volume groups can be accessed by external hosts using the iSCSI protocol. To secure volume groups from unauthorized access, Nutanix recommends configuring CHAP (Challenge-Handshake Authentication Protocol) for each volume group in Prism Element. CHAP is a security feature that authenticates iSCSI initiators and targets before allowing access to a volume group. CHAP requires both the initiator and the target to have a shared secret (a password) that is used to generate a challenge and a response during the authentication process. CHAP can prevent unauthorized access to volume groups and protect data from malicious attacks. References: Nutanix Volumes Administration Guide, page 25; Nutanix Volumes Security Guide Nutanix's best practices for Volumes security emphasize securing iSCSI connections through authentication.

Configuring Volume Groups to use CHAP ensures that only authorized initiators can access the storage, preventing unauthorized access and aligning with security compliance requirements. This is a direct and mandatory step for securing Volumes, making it the best choice among the options.

Exact Extract from Nutanix Documentation:

From the Nutanix Volumes Administration Guide (available on the Nutanix Portal):

"To align with Nutanix best practices for security, configure Volume Groups to use CHAP (Challenge- Handshake Authentication Protocol) for iSCSI authentication. This ensures that only authorized initiators can access the Volume Group, protecting against unauthorized access and enhancing security."

:

Nutanix Volumes Administration Guide, Version 6.0, Section: "Security Best Practices for Nutanix Volumes" (Nutanix Portal).  
Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Volumes Security Configuration".

## NEW QUESTION # 108

.....

More and more people look forward to getting the Nutanix certification by taking an exam. However, the exam is very difficult for a lot of people. Especially if you do not choose the correct study materials and find a suitable way, it will be more difficult for you to pass the NCP-US-6.5 exam and get the related certification. If you want to get the related certification in an efficient method, please choose the NCP-US-6.5 Learning Materials from our company. We can guarantee that the NCP-US-6.5 study materials from our company will help you pass the exam and get the certification easily.
