### WGU Cloud Deployment and Operations Sample Questions (Q16-Q21):

#### NEW QUESTION # 16

(Which solution should be used to host content to be processed for Amazon Made?)

- A. DocumentDB
- B. DynamoDB
- C. S3
- D. EC2

**Answer: C**

Explanation:

Amazon S3 (Simple Storage Service) should be used to host content to be processed for Amazon Made, as it provides scalable object storage ideal for storing and retrieving large amounts of data, such as media files or documents, for processing workflows. The WGU Cloud Deployment and Operations Study Guide (Section 2.1, Amazon S3) states, "S3 is the preferred solution for hosting content to be processed by services like Amazon Made, offering durable and highly available storage with support for lifecycle policies and integration with other AWS services." DocumentDB, DynamoDB, and EC2 are not designed for this content hosting purpose.

#### NEW QUESTION # 17

(What should be configured in Systems Manager to set the error threshold for automation documents?)

- A. Resource group
- B. Session preferences
- C. Rate control
- D. Maintenance windows

**Answer: C**

Explanation:

In AWS Systems Manager, the error threshold for automation documents is configured using rate control.

Rate control allows administrators to define the maximum number of errors or concurrent executions that can occur before an automation task is throttled or stopped, ensuring system stability. The WGU Cloud Deployment and Operations Study Guide (Section 5.1, Systems Manager Automation) explicitly states, "Rate control settings in Automation documents can be used to specify the maximum number of errors allowed during execution, helping to manage error thresholds effectively." Resource groups, session preferences, and maintenance windows do not directly address error thresholds.

#### **NEW QUESTION # 18**

(What should be used to monitor estimated AWS charges?)

- **A. Billing alarm**
- B. Pricing Calculator
- C. Cognito
- D. Forecast

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A Billing alarm in Amazon CloudWatch should be used to monitor estimated AWS charges by setting thresholds on cost metrics and triggering notifications when exceeded. This helps manage budgets effectively.

The WGU Cloud Deployment and Operations Study Guide (Section 7.4, Cost Monitoring) states, "Billing alarms in CloudWatch monitor estimated charges against a defined threshold, sending alerts via SNS to prevent cost overruns." Cognito handles user authentication, Pricing Calculator estimates costs pre-deployment, and Forecast predicts usage, none of which monitor real-time charges.

#### **NEW QUESTION # 19**

(Which two retention periods are supported by Performance Insights? Choose 2 answers.)

- A. 1 day
- **B. 1 year**
- **C. 7 days**
- D. 2 years

**Answer: B,C**

Explanation:

Amazon RDS Performance Insights supports retention periods of 7 days and 1 year for storing performance data, depending on the configuration and edition. The default retention is 7 days for standard monitoring, while enabling enhanced monitoring or the Performance Insights extended retention feature allows data to be retained for up to 1 year. The WGU Cloud Deployment and Operations Study Guide (Section 7.2, Performance Insights) states, "Performance Insights offers a 7-day retention period by default, with an option to extend to 1 year for detailed historical analysis, supporting cost and performance optimization." Options A (1 day) and D (2 years) are not supported retention periods.

#### **NEW QUESTION # 20**

(Which AWS service is used to provide remote workers with secure access to AWS resources?)

- A. NAT instance
- **B. Client VPN**
- C. Network Firewall
- D. Transit Gateway

**Answer: B**

Explanation:

AWS Client VPN is used to provide remote workers with secure access to AWS resources by establishing a VPN connection to the VPC, ensuring encrypted access to private networks. The WGU Cloud Deployment and Operations Study Guide (Section 3.2, Client VPN) states, "Client VPN enables secure remote access to AWS resources within a VPC, using mutual authentication and encryption to protect data for remote workers." Transit Gateway manages inter-VPC routing, Network Firewall filters traffic, and NAT instances handle outbound internet access, none of which are designed for remote worker access.
