

Pass-Sure CompTIA Latest CS0-002 Exam Question - CS0-002 Free Download

BONUS!!! Download part of Exams4sures CS0-002 dumps for free: https://drive.google.com/open?id=1GBu-J2uKK-I-Y8Kx6Org7_ZdRNfHZ67x

Our experts who compiled the CS0-002 practice materials are assiduously over so many years in this filed. They add the new questions into the CS0-002 study guide once the updates come in the market, so they recompose the contents according to the syllabus and the trend being relentless in recent years. With so accurate information of our CS0-002 learning questions, we can confirm your success by your first attempt.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam, also known as CS0-002, is a globally recognized certification offered by CompTIA. CompTIA Cybersecurity Analyst (CySA+) Certification Exam certification is designed for professionals who want to pursue a career in cybersecurity analysis. CS0-002 is the updated version of the previous CySA+ exam, which was first introduced in 2017. The updated version is more comprehensive and covers the latest cybersecurity threats and challenges that organizations face.

Correct Latest CS0-002 Exam Question & Leader in Qualification Exams & Pass-Sure Latest CS0-002 Guide Files

In order to protect the vital interests of each IT certification exams candidate, Exams4sures provides high-quality CompTIA CS0-002 Exam Training materials. This exam material is specially developed according to the needs of the candidates. It is researched by the IT experts of Exams4sures. Their struggle is not just to help you pass the exam, but also in order to let you have a better tomorrow.

CompTIA Cybersecurity Analyst (CySA+) Certification Exam Sample Questions (Q261-Q266):

NEW QUESTION # 261

An organization is conducting penetration testing to identify possible network vulnerabilities. The penetration tester has already identified active hosts in the network and is now scanning individual hosts to determine if any are running a web server. The output from the latest scan is shown below:

Which of the following commands would have generated the output above?

- A. `-nmap -sV 192.168.1.13 -p 80`
- B. `-nmap -sV 192.168.1.1 -p 80`
- C. `-nmap -sP 192.168.1.0/24 -p ALL`
- D. `-nmap -sP 192.168.1.13 -p ALL`

Answer: A

NEW QUESTION # 262

During an incident investigation, a security analyst acquired a malicious file that was used as a backdoor but was not detected by the antivirus application. After performing a reverse-engineering procedure, the analyst found that part of the code was obfuscated to avoid signature detection. Which of the following types of instructions should the analyst use to understand how the malware was obfuscated and to help deobfuscate it?

- **A. XOR**
- B. MOV
- C. ADD
- D. MOVL
- E. SUB

Answer: A

NEW QUESTION # 263

An analyst is reviewing the following output as part of an incident:

Which of the following is MOST likely happening?

- A. The hosts are part of a reflective denial-of-service attack.
- B. Host 291.168.1.10 is performing firewall port knocking.
- C. Information is leaking from the memory of host 10.20.30.40
- **D. Sensitive data is being exfiltrated by host 192.168.1.10.**

Answer: D

NEW QUESTION # 264

An analyst is performing a BIA and needs to consider measures and metrics. Which of the following would help the analyst achieve this objective? (Select two).

- A. Disaster recovery plan for non-critical services
- **B. Maximum downtime before impact is unacceptable**
- C. Time required to inform stakeholders about outage
- D. Time to reimage the server
- **E. Total time accepted for business process outage**
- F. Minimum data backup volume

Answer: B,E

Explanation:

The objective of a BIA is to determine the potential impacts of various disruptions on the business processes and functions, and to establish the recovery priorities and objectives for each process and function. To achieve this objective, the analyst needs to consider various measures and metrics that can quantify the impacts and the recovery requirements. Some of the common measures and metrics that are used in a BIA are:

Maximum downtime before impact is unacceptable: This metric defines the maximum amount of time that a business process or function can be disrupted without causing significant or irreversible damage to the organization's reputation, operations, finances, or legal obligations. This metric is also known as the maximum tolerable downtime (MTD) or maximum tolerable period of disruption (MTPD). It helps to determine the recovery time objective (RTO), which is the target time for restoring the process or function to an acceptable level of service after a disruption.

Total time accepted for business process outage: This metric defines the total amount of time that a business process or function can be out of service within a given period, such as a day, a week, or a month. This metric is also known as the recovery point objective (RPO), which is the maximum amount of data loss or corruption that can be tolerated after a disruption. It helps to determine the backup frequency and retention policy for the data and systems that support the process or function.

Time required to inform stakeholders about outage: This metric defines the time frame for communicating with the internal and external stakeholders who are affected by or involved in the disruption and recovery of a business process or function. This metric helps to establish the crisis communication plan and protocol, which specifies who, what, when, where, why, and how to

communicate during and after a disruption². It also helps to manage the expectations and perceptions of the stakeholders and to maintain their trust and confidence in the organization.

Time to reimage the server: This metric defines the time needed to restore a server to its original or desired state after a disruption. This metric helps to estimate the resources and efforts required for recovering the server and its applications. It also helps to evaluate the feasibility and effectiveness of different recovery strategies, such as restoring from backup, rebuilding from scratch, or replacing with a spare³.

Minimum data backup volume: This metric defines the minimum amount of data that needs to be backed up regularly to ensure the continuity and integrity of a business process or function. This metric helps to optimize the backup process and reduce the storage costs and bandwidth consumption. It also helps to identify the critical data elements and sources that are essential for the process or function⁴.

NEW QUESTION # 265

A security analyst is correlating, ranking, and enriching raw data into a report that will be interpreted by humans or machines to draw conclusions and create actionable recommendations. Which of the following steps in the intelligence cycle is the security analyst performing?

- A. Data collection
- B. Processing and exploitation
- C. Planning and direction
- **D. Analysis and production**
- E. Dissemination and evaluation

Answer: D

Explanation:

Analysis is a human process that turns processed information into intelligence that can inform decisions. Depending on the circumstances, the decisions might involve whether to investigate a potential threat, what actions to take immediately to block an attack, how to strengthen security controls, or how much investment in additional security resources is justified.
