

Pass Guaranteed 2026 Google Professional-Cloud-Database-Engineer: Google Cloud Certified - Professional Cloud Database Engineer Useful Reliable Braindumps Pdf

P.S. Free & New Professional-Cloud-Database-Engineer dumps are available on Google Drive shared by Lead1Pass: https://drive.google.com/open?id=1UhP8_FqakE_u-1eLgD_eSMWx1bvZPRq-

Our Google Cloud Certified - Professional Cloud Database Engineer study question has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit Professional-Cloud-Database-Engineer exam questions. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the Latest Professional-Cloud-Database-Engineer Test Guide. You don't worry about that how to keep up with the market trend, just follow us. In addition to the industry trends, the Professional-Cloud-Database-Engineer test guide is written by lots of past materials' rigorous analyses.

Google Professional-Cloud-Database-Engineer exam is a certification exam offered by Google Cloud that tests the individual's proficiency in designing, developing, and managing scalable, secure, and highly available database solutions. Professional-Cloud-Database-Engineer Exam is designed to evaluate the candidate's ability to design, plan, and manage cloud database solutions using Google Cloud Platform services such as Cloud SQL, Cloud Spanner, and Cloud Bigtable.

Professional-Cloud-Database-Engineer Dumps & Instant Professional-Cloud-Database-Engineer Access

I believe that after you use our Professional-Cloud-Database-Engineer study materials for a while, we will understand why we have a 99% pass rate. Our company has been pursuing the quality of our products. And our professional experts are the most specialized people in this career to help us pass the Professional-Cloud-Database-Engineer Exam. They have studied and done research on the design of our Professional-Cloud-Database-Engineer practice guide for over ten years. So every detail of our Professional-Cloud-Database-Engineer exam questions is perfect.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q114-Q119):

NEW QUESTION # 114

You host an application in Google Cloud. The application is located in a single region and uses Cloud SQL for transactional data. Most of your users are located in the same time zone and expect the application to be available 7 days a week, from 6 AM to 10 PM. You want to ensure regular maintenance updates to your Cloud SQL instance without creating downtime for your users. What should you do?

- A. Configure your Cloud SQL instance with high availability enabled.
- B. **Configure a maintenance window during a period when no users will be on the system. Control the order of update by setting non-production instances to earlier and production instances to later.**
- C. Enable maintenance notifications for users, and reschedule maintenance activities to a specific time after notifications have been sent.
- D. Create your database with one primary node and one read replica in the region.

Answer: B

Explanation:

Configure a maintenance window during a period when no users will be on the system. Control the order of update by setting non-production instances to earlier and production instances to later.

NEW QUESTION # 115

Your company is launching a new globally distributed application with strict requirements for low latency, strong consistency, zero downtime, and high availability (HA). You need to configure a scalable database solution to support anticipated rapid growth and optimal application performance. What should you do?

- A. Implement Bigtable with replication across multiple regions and configure to prioritize data accuracy.
- B. **Create a spanner instance across regions for optimal performance.**
- C. Create a Cloud SQL instance in HA mode with a cross-region read replica.
- D. Create an AlloyDB instance in HA mode with a cross-region read replica.

Answer: B

NEW QUESTION # 116

You support a consumer inventory application that runs on a multi-region instance of Cloud Spanner. A customer opened a support ticket to complain about slow response times. You notice a Cloud Monitoring alert about high CPU utilization. You want to follow Google-recommended practices to address the CPU performance issue. What should you do first?

- A. **Increase the number of processing units.**
- B. Shard data required by the application into multiple instances.
- C. Decrease the number of processing units.
- D. Modify the database schema, and add additional indexes.

Answer: A

Explanation:

In case of high CPU utilization like, mentioned in question, refer: <https://cloud.google.com/spanner/docs/identify-latency-point#:~:text=Check%20the%20CPU%20utilization%20of%20the%20instance.%20If%20the%20CPU%20utilization%20of%20the%20instance%20is%20above%20the%20recommended%20level%2C%20you%20should%20manually%20add%20more%20nodes,%20or%20set%20up%20auto%20scaling.> Indexes and schema are reviewed post identifying query with slow performance. Refer: <https://cloud.google.com/spanner/docs/troubleshooting-performance-regressions#review-schema>

NEW QUESTION # 117

You are building an Android game that needs to store data on a Google Cloud serverless database. The database will log user activity, store user preferences, and receive in-game updates. The target audience resides in developing countries that have intermittent internet connectivity. You need to ensure that the game can synchronize game data to the backend database whenever an internet network is available. What should you do?

- A. Use Cloud SQL with an external (public) IP address.
- B. Use an in-app embedded database.
- C. Use Cloud Spanner.
- D. **Use Firestore.**

Answer: D

Explanation:
<https://firebase.google.com/docs/firestore>

NEW QUESTION # 118

Your customer is running a MySQL database on-premises with read replicas. The nightly incremental backups are expensive and add maintenance overhead. You want to follow Google-recommended practices to migrate the database to Google Cloud, and you need to ensure minimal downtime. What should you do?

- A. Create a Compute Engine VM, install MySQL on the VM, and then import the dump file.
- B. Use the mysqldump utility to take a backup of the existing on-premises database, and then import it into Cloud SQL.
- C. Create an external replica, and use Cloud SQL to synchronize the data to the replica.
- D. Create a Google Kubernetes Engine (GKE) cluster, install MySQL on the cluster, and then import the dump file.

Answer: C

Explanation:
<https://cloud.google.com/sql/docs/mysql/replication/configure-replication-from-external>

NEW QUESTION # 119

.....

Do you often feel that your ability does not match your ambition? Are you dissatisfied with the ordinary and boring position? If your answer is yes, you can try to get the Professional-Cloud-Database-Engineer certification that you will find there are so many chances wait for you. You can get a better job; you can get more salary. But if you are trouble with the difficult of Professional-Cloud-Database-Engineer Exam, you can consider choose Professional-Cloud-Database-Engineer guide question to improve your knowledge to pass Professional-Cloud-Database-Engineer exam, which is your testimony of competence.
