NEW QUESTION # 54

What are two signs of a phishing e-mail?

Choose 2 answers

- A. Personalized greetings
- B. An e-mail from an organization you don't recognize
- C. Frequent reminders from the same e-mail address
- D. Poor grammar and spelling errors
- E. A link to a website sent by a family member

Answer: B,D

Explanation:

1. Poor grammar and spelling errors: Phishing emails often contain mistakes in language, grammar, or spelling. These errors can be a red flag that the email is not legitimate.

2. An email from an organization you don't recognize: Be cautious if you receive an email from an unfamiliar organization. Verify the sender's legitimacy before taking any action.

NEW QUESTION # 55

Which project management life cycle stage starts with setting project goals using either the SMART or the CLEAR framework?

- A. Planning
- B. Execution
- C. Closure
- **D. Initiation**

Answer: D

Explanation:

Initiation is the project management life cycle stage that begins with establishing the project's purpose and setting clear goals, often using frameworks such as SMART or CLEAR. In Information Technology project management, initiation defines what the project is trying to achieve, why it matters, and whether it is feasible.

This stage commonly includes creating a project charter, identifying stakeholders, defining high-level scope, and securing authorization to proceed. SMART goals emphasize specific, measurable, achievable, relevant, and time-bound objectives, while CLEAR goals emphasize collaborative, limited, emotional, appreciable, and refinable objectives. Both frameworks help ensure the project begins with clear direction and measurable outcomes. Planning comes after initiation and focuses on detailed schedules, budgets, task breakdowns, risk plans, and resource assignments. Execution is where deliverables are built and work is performed. Closure finalizes acceptance and documents lessons learned. Because goal-setting and formal authorization are core features of the beginning phase, the correct stage is initiation.

NEW QUESTION # 56

What is one of the factors that determines the choice of an operating system?

- **A. Device type**
- B. Driver compatibility
- C. Coding language
- D. Number of devices

Answer: A

Explanation:

One major factor that determines the choice of an operating system is the device type. Operating systems are designed for specific categories of hardware and usage environments, such as desktop computers, servers, mobile phones, tablets, embedded devices, and network appliances. In Information Technology fundamentals, selecting an operating system begins with identifying the platform requirements, including processor architecture, memory limits, battery needs, and how the device will be used. For example, iOS and Android are designed for mobile devices, Windows and macOS are designed for desktops and laptops, and server operating systems are tuned for reliability, remote administration, and multi-user workloads. While driver compatibility is also an important consideration, many curricula treat it as a sub-factor related to hardware support within a chosen device category. Number of devices relates more to licensing and deployment planning, and coding language is not a direct determinant of which operating system must be used. Therefore, device type is a correct factor in choosing an operating system.

NEW QUESTION # 57

Which type of communications media uses light waves to transmit data?

- A. Radio towers
- **B. Fiber optic**
- C. Coaxial
- D. Twisted pair

Answer: B

Explanation:

Fiber optic communication uses light waves to transmit data. Here's how it works:

1. Fiber Optic Cable Structure:

oA fiber optic cable consists of a core made of glass or plastic, surrounded by a cladding layer.

oThe core acts as a light guide, allowing light to travel through it by total internal reflection.

oThe cladding layer ensures that the light remains within the core.

2.Light Propagation:

oWhen data needs to be transmitted, a light source (usually a laser or LED) sends pulses of light into the fiber.

oThe light travels down the core, bouncing off the cladding due to total internal reflection.

oAs a result, the light signal remains confined within the core.

3.Advantages of Fiber Optics:

oHigh Bandwidth: Fiber optics can transmit large amounts of data quickly.

oLow Attenuation: Light signals experience minimal loss over long distances.

oImmune to Electromagnetic Interference: Unlike copper cables, fiber optics are not affected by electromagnetic fields.

oSecure: It's difficult to tap into fiber optic cables without detection.

4.Applications:

oInternet Backbone: Fiber optics form the backbone of the global internet, connecting continents.

oTelecommunications: Used for long-distance phone calls and high-speed internet.

oData Centers: Within data centers, fiber optics connect servers and storage devices.

oCable TV: Many cable TV networks use fiber optics for signal distribution.

NEW QUESTION # 58

What is the type of software that has no intellectual property protections?

- A. Freeware
- B. Shareware
- C. Closed-source
- D. Public domain

Answer: D

Explanation:

Public domain software has no intellectual property protections such as copyright restrictions. In Information Technology licensing concepts, public domain means the creator has waived copyright or the copyright has expired, so the work can be used freely by anyone. Users can copy, modify, distribute, and reuse the software without needing permission and without paying licensing fees. This is different from freeware, which is free to use but still copyrighted and subject to license limitations. It is also different from shareware, which is typically copyrighted software released as a trial or limited version to encourage purchase of the full product. Closed-source refers to a model where the source code is not provided publicly, but it does not mean there are no intellectual property protections. The key phrase in the question is no intellectual property protections, which aligns directly with public domain status. Therefore, the correct answer is public domain.
