Answer: A

NEW QUESTION # 41

Your company has decided to move an on-premises application to the cloud. The application's data is currently stored locally on a physical Red Hat Enterprise Linux (REHL) server. Which NetApp solution would be used to migrate this data to an Azure NetApp Files volume?

- A. SnapVault
- B. AZcopy
- C. CloudSync
- D. SnapMirror

Answer: C

NEW QUESTION # 42

A customer wants a storage solution with a zero RPO and near-zero RTO for all their NAS workloads. Which NetApp solution meets these needs?

- A. storage VM disaster recovery (SVM DR)
- B. SnapMirror Business Continuity (SMBC)
- C. SnapMirror Synchronous (SM-S)
- D. MetroCluster over IP

Answer: D

Explanation:

B). MetroCluster over IP: MetroCluster, particularly the over IP variant, is designed for high availability and disaster recovery. It provides synchronous replication of data over IP networks, ensuring that data is constantly mirrored between two geographically separated sites. This setup offers a zero RPO, meaning no data loss in the event of a site failure, and a near-zero RTO, as the failover to the secondary site is automatic and rapid. MetroCluster over IP is particularly well-suited for environments where continuous data availability and quick recovery are critical.

NEW QUESTION # 43

What provides dynamic storage orchestration services for Kubernetes workloads?

- A. ONTAP software
- B. Ansible
- C. Trident
