## Nutanix - NCP-MCA –Trustable Braindump Free

The meaning of qualifying examinations is, in some ways, to prove the candidate's ability to obtain qualifications that show your ability in various fields of expertise. If you choose our NCP-MCA learning guide materials, you can create more unlimited value in the limited study time, through qualifying examinations, this is our NCP-MCA Real Questions and the common goal of every user, we are trustworthy helpers, so please don't miss such a good opportunity. The acquisition of NCP-MCA qualification certificates can better meet the needs of users' career development.

## Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q22-Q27):

### NEW QUESTION # 22

An administrator has a vendor-provided script that must be run at 9 am every Saturday on a Linux application VM. The administrator currently has a playbook that has a Time trigger and a VM SSH action to execute the script. However, the administrator has received a request to have the output of the script emailed to the application team when it is executed.

What is the easiest way to satisfy this request?

- A. Add an Email action to the end of the existing playbook and use the `{{action[index] .stdout}}` parameter in the Message field.
- B. Direct the output of the script to a file and use the Send Email with Payload action at the end of your existing playbook.
- C. Add an Email action to the end of the existing playbook and use the `{{action [index].response_body}}` parameter in the Message field.
- D. Modify the script to include a function to format the output of the script and email the output to the desired address.

**Answer: A**

Explanation:

The easiest way to satisfy the request is to add an Email action to the end of the existing playbook and use the `{{action[index] .stdout}}` parameter in the Message field. This way, the administrator does not need to modify the script or create a file to store the output. The `{{action[index] .stdout}}` parameter will capture the standard output of the previous action, which is the VM SSH action that executes the script. The Email action will then send the output as the message body to the specified recipients.

Nutanix

What needs to be done in order to enable the developer to complete this requested task? (Choose two.)

- A. Create AWS and Azure Providers
- B. Add the Providers to the Project
- C. Enable Environment for AWS and Azure
- D. Upgrade Calm to version 3.2.x

**Answer: A,B**

Explanation:

In order to enable the developer to complete the requested task, AWS and Azure Providers need to be created (Option A). This is because, in the context of Nutanix Calm, providers are integrations with public and private cloud infrastructures. The developer is trying to deploy an application on AWS and Azure clouds but currently only has Nutanix as a configured provider. After creating the providers, they need to be added to the project (Option B) so that applications can be deployed on them. Option C is incorrect because environments are not required for multicloud deployments. Option D is also incorrect because Calm version 3.2.x is not relevant to the question.

References: The information can be verified from Nutanix official training and certification documents available at Nutanix Training & Certification. You can also check out the Nutanix Certified Professional - Multicloud Automation (NCP-MCA) 6.5 Exam guide for more details on the exam objectives and format.

Additionally, you can watch the Nutanix Calm - Multicloud Automation playlist on YouTube for some video tutorials on Nutanix Calm features and functionalities.

#### NEW QUESTION # 24

An end user for an application that has been assigned the Consumer role within the project has noticed multiple issues with a blueprint that need to be addressed. The decision has been made to bring the end user onto the team to be able to modify the blueprints for this project.

Using the concept of least privilege, what role should the end user be assigned?

- A. Consumer
- **B. Developer**
- C. Project Admin
- D. Operator

**Answer: B**

Explanation:

The Developer role is the most appropriate role for the end user who needs to modify the blueprints for the project. The Developer role allows the user to create, edit, and delete blueprints and runbooks within the project, as well as launch and manage applications from the Marketplace. The Developer role does not have the privileges to create or manage projects, users, roles, or categories, which are reserved for the Project Admin role. The Consumer role only allows the user to launch and manage applications from the Marketplace, but not to modify the blueprints or runbooks. The Operator role allows the user to monitor and manage the infrastructure and applications within the project, but not to create or edit the blueprints or runbooks.

#### NEW QUESTION # 25

An administrator has created a task for a blueprint that could be applied to another blueprint. The administrator wants to reuse the task with the least amount of effort.

How can the administrator accomplish this?

- **A. Publish the task to the Task Library select the task from the Task Library from the other blueprint.**
- B. Publish the task to Github select the task from the Github Repository from the other blueprint.
- C. Publish the task to the Marketplace, select the task from the Marketplace from the other blueprint.
- D. Publish the task to the Task Repository, select the task from the Task Repository from the other blueprint.

**Answer: A**

Explanation:

The Task Library is a centralized repository of tasks that can be reused across multiple blueprints. The administrator can publish a task to the Task Library by clicking on the Publish icon in the task editor. The task will then be available in the Task Library tab under the Tasks section in the Calm UI. The administrator can select the task from the Task Library and drag and drop it into another blueprint. This way, the administrator can reuse the task with the least amount of effort.

### NEW QUESTION # 26

A developer has been asked to update the existing blueprint with an additional option of scaling it both out and in. Where in the Blueprint Editor should the developer make the relevant changes?

- A. Environment, Actions
- B. Configuration, Settings
- C. Application Profile, Actions
- D. Blueprint, Configuration

**Answer: C**

### NEW QUESTION # 27

.....

If you choose Prep4sures, success is not far away for you. And soon you can get Nutanix Certification NCP-MCA Exam certificate. The product of Prep4sures not only can 100% guarantee you to pass the exam, but also can provide you a free one-year update service.
