NEW QUESTION # 77

Which command displays file names only and no additional information?

- A. `ls -nl`
- **B. `ls -a`**
- C. `ls -alh`
- D. `ls -l`
- E. `ls -lh`

Answer: B

Explanation:

The `ls` command is used to list the files and directories in a given path. By default, the `ls` command displays only the file names, without any additional information. However, the `ls` command can also take various options to modify its output. For example, the `-l` option tells `ls` to display the long format, which includes the file permissions, owner, group, size, date, and name. The `-h` option tells `ls` to display the file sizes in a human-readable format, such as KB, MB, GB, etc. The `-a` option tells `ls` to display all files, including the hidden ones that start with a dot (.). The `-n` option tells `ls` to display the numeric user ID and group ID instead of the user name and group name. Therefore, the only option that does not add any additional information to the file names is the `-a` option. The command `ls -a` will display all the file names in the current directory, including the hidden ones, but nothing else. Reference:
