## Analyze Your Progress With Desktop CDCS-001 Practice Exam Software

Our CDCS-001 exam questions are designed from the customer's perspective, and experts that we employed will update our CDCS-001 learning materials according to changing trends to ensure the high quality of the CDCS-001 practice materials. What are you still waiting for? Choosing our CDCS-001 guide questions and work for getting the certificate, you will make your life more colorful and successful.

The CDCS certification exam is a challenging exam that requires a solid understanding of data center operations and management. CDCS-001 Exam consists of 100 multiple-choice questions that must be answered in 2 hours. To pass the exam, candidates must score at least 70%. Certified Data Centre Specialist (CDCS) certification is valid for three years, after which candidates must renew their certification by completing the required continuing education units (CEUs) or retaking the exam. Overall, the CDCS certification is a valuable credential for professionals in the field of data center management and operations.

# GAQM Certified Data Centre Specialist (CDCS) Sample Questions (Q38-Q43):

## NEW QUESTION # 38
True or False: Human error is a major cause of data center downtime

- A. False
- B. True

**Answer: B**

Explanation:
Human error is a major cause of data center downtime. Human mistakes are one of the top causes of data center outages, accounting for around one-third of all downtime incidents. Common causes of human error in data centers include misconfiguration, inadequate maintenance, and improper security practices. To reduce the risk of human error, it is important to ensure that data center staff receive proper training, have adequate access control measures in place, and are familiar with best practices for data center operations.

## NEW QUESTION # 39
_____ protects electrical equipment from damage caused by overload or short circuit.

- A. Circuit breaker
- B. Server
- C. IEC cable
- D. Volt switch

**Answer: A**

Explanation:
Explanation
A circuit breaker is a device that protects electrical equipment from damage caused by overload or short circuit. It does this by automatically disconnecting the power supply when it detects a surge or drop in voltage, preventing the equipment from being damaged.

## NEW QUESTION # 40
A _____ generator system is a combination of an electrical generator and a mechanical engine mounted together to form a single piece of equipment.

- A. passive
- B. software
- C. active
- D. standby

**Answer: D**

Explanation:
Explanation
A Standby Generator System is a combination of an electrical generator and a mechanical engine mounted together to form a single

piece of equipment. The generator provides power to essential appliances and equipment in the event of a power outage. Standby Generator Systems are usually powered by gasoline, diesel, natural gas, or propane, and they are designed to be able to be activated quickly in the event of an emergency.

**NEW QUESTION # 41**

Which component is designed to protect electrical equipment from damage caused by overload or short circuit?

- **A. Circuit Breaker**
- B. Stabiliser
- C. Transfer Switch
- D. Transient

**Answer: A**

Explanation:
A circuit breaker is a device designed to protect electrical equipment from damage caused by overload or short circuit. Circuit breakers are designed to detect when too much current is flowing through a circuit and to shut the circuit off when that happens. This protects the equipment from damage due to overloading or short circuiting, and it also helps prevent fires and other accidents.

**NEW QUESTION # 42**

Which system in Air Distribution System takes the hot exhaust air from the IT equipment to the CRAC

- **A. Return system**
- B. Supply system
- C. Maintenance system
- D. Regulation system

**Answer: A**

Explanation:
Explanation
The return system in an air distribution system takes the hot exhaust air from the IT equipment and returns it to the Computer Room Air Conditioner (CRAC) unit. The CRAC unit cools the hot exhaust air and recirculates it back into the data center. The return system typically includes ducts, grills, and other components that allow the hot air to be efficiently and effectively returned to the CRAC unit.
Supply system is responsible for bringing in the cooled and filtered air from the CRAC unit to the data center.
Maintenance system and regulation system are not related to air distribution system in the data center.
