

# RedHat EX380 Exam Dumps Collection & New EX380 Test Papers

Most people define EX380 study tool as regular books and imagine that the more you buy, the higher your grade may be. It is true this kind of view make sense to some extent. However, our EX380 real questions are high efficient priced with reasonable amount, acceptable to exam candidates around the world. Our EX380 practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. Unlike those untenable practice materials in the market, our EX380 practice materials are highly utilitarian for their accuracy of the real exam because all content are compiled by proficient experts who engaged in this area more than ten years. It is our unswerving will to help you pass the exam by EX380 study tool smoothly.

The RedHat EX380 PDF dumps file is the most convenient way to prepare for the examination. This document is a collection of most probable and realistic Red Hat Certified Specialist in OpenShift Automation and Integration EX380 dumps. With this PDF file, you have Red Hat Certified Specialist in OpenShift Automation and Integration EX380 questions that will appear in the real exam. You can immediately download our EX380 PDF Questions from the DumpsMaterials website after payment. Without place and time limits, you can use the PDF format of Red Hat Certified Specialist in OpenShift Automation and Integration EX380 real exam questions via smartphones, tablets, and laptops.

## **New EX380 Test Papers & Exam EX380 Experience**

The operation of our EX380 exam torrent is very flexible and smooth. Once you enter the interface and begin your practice on our windows software. You will easily find there are many useful small buttons to assist your learning. The correct answer of the EX380 exam torrent is below every question, which helps you check your answers. We have checked all our answers. You just need to

wait a few seconds before knowing your scores. The scores are calculated by every question of the EX380 Exam guides you have done. So the final results will display how many questions you have answered correctly and mistakenly. You even can directly know the score of every question, which is convenient for you to know the current learning condition.

## RedHat EX380 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Configure and manage OpenShift Authentication and Identities: Covers integrating OpenShift with external identity providers like LDAP and Keycloak, managing RBAC, group synchronization, and kubeconfig-based authentication.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Manage workloads with pod scheduling: Covers controlling where pods run using taints, tolerations, labels, selectors, affinity rules, and pod disruption budgets to ensure workload placement and resiliency.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Provision and inspect cluster logging: Covers deploying and configuring OpenShift logging with Vector and Loki, forwarding logs externally, querying logs, and diagnosing logging issues.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Manage cluster monitoring and metrics: Covers troubleshooting application and cluster performance issues and managing alerts and notifications.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Implement OpenShift GitOps: Covers deploying and configuring Argo CD with the GitOps operator to manage both cluster administration and application delivery through Git-based pipelines and integrations.</li></ul>

## RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q33-Q38):

### NEW QUESTION # 33

Backup and Restore - Fix SCC for Restored Application

#### Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Identify the application namespace after restore.

The lab shows the namespace as my-app-namespace.

Step 2: Run the SCC assignment command:

```
oc adm policy add-scc-to-user anyuid -z default -n my-app-namespace
```

Step 3: Confirm the role binding is applied.

The lab output shows:

```
clusterrole.rbac.authorization.k8s.io/systemopenshift.scc:anyuid added: "default" Detailed explanation:
```

After a restore, the application may fail if its pods require a security context not permitted by the default SCC allocation. This command grants the anyuid SCC to the default service account in the my-app-namespace project. The -z default syntax targets the default service account, which many restored workloads use if no custom service account is defined. The anyuid SCC allows containers to run with arbitrary user IDs, which some legacy or prebuilt images require. In OpenShift, SCC mismatches commonly cause pods to remain in pending or crash-related states. Assigning the proper SCC resolves those admission issues so workloads can start successfully. This step is therefore a post-restore operational fix to align security policy with application requirements.

### NEW QUESTION # 34

Add a second Identity Provider (HTPasswd) alongside LDAP

Task Information : Configure multiple identity providers by adding an HTPasswd IDP without removing the existing LDAP IDP.

#### Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- \* Create a local htpasswd file with a test user
  - \* `htpasswd -c -B -b /tmp/htpass.txt testuser RedHat123!`
  - \* `-c` creates a new file (use only once).
  - \* `-B` uses bcrypt hashing (recommended).
  - \* `-b` supplies password non-interactively (good for labs).
  - \* Create the HTPasswd secret in openshift-config
  - \* `oc -n openshift-config create secret generic htpass-secret --from-file=htpasswd=/tmp/htpass.txt`
  - \* OAuth reads the htpasswd key from this secret.
  - \* Edit OAuth and add the HTPasswd provider (keep LDAP intact)
  - \* `oc edit oauth cluster`
- Add another entry under `spec.identityProviders`:
- `name: local-htpasswd`
  - `mappingMethod: claim`
  - `type: HTPasswd`
  - `htpasswd:`
  - `fileData:`
  - `name: htpass-secret`
- \* This adds a second login option while preserving LDAP.
  - \* Restart OAuth pods
  - \* `oc -n openshift-authentication delete pod -l app=oauth-openshift`
  - \* Ensures the updated list of identity providers is loaded.
  - \* Verify login works for htpasswd user
  - \* Log in via console using testuser.
  - \* Confirm the user is created:
  - \* `oc get user testuser`

### NEW QUESTION # 35

Install OADP Operator and verify Velero components

Task Information : Install the OADP operator and confirm Velero pods/components are running.

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

- \* Install OADP via Web Console
- \* Operators # OperatorHub # search OADP / OpenShift API for Data Protection # Install
- \* Explanation: This operator manages Velero and backup integrations.
- \* Verify the operator CSV is installed
- \* `oc get csv -A | grep -i -E "oadp|data protection|velero"`
- \* Confirms installation succeeded.
- \* Verify pods in the OADP namespace (commonly openshift-adp)
- \* `oc get pods -n openshift-adp`
- \* You should see Velero/OADP-related pods in Running state.

### NEW QUESTION # 36

Maintain group synchronization on a schedule (CronJob)

Task Information : Create a CronJob that runs LDAP group sync on a schedule using a service account that has the required permissions.

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

- \* Create a namespace for the sync job
- \* `oc new-project id-sync`

- \* Keeps the automation components organized.
- \* Create a service account for the sync job
- \* `oc -n id-sync create sa group-sync`
- \* CronJob runs under this SA identity.
- \* Grant cluster permissions to manage groups
- \* `oc adm policy add-cluster-role-to-user cluster-admin system:serviceaccount:id-sync:group-sync`
- \* In real environments you should scope down, but lab Task SIMULATIONS often accept cluster-admin for speed.
- \* Create a ConfigMap for `groupsync.yaml` and Secret(s) for bind password/CA
- \* Mount them into the job container.
- \* Create CronJob to run group sync
- \* Command inside job:
- \* `oc adm groups sync --sync-config=/config/groupsync.yaml --confirm`
- \* The CronJob ensures periodic reconciliation with LDAP.
- \* Verify job runs
- \* `oc -n id-sync get cronjob`
- \* `oc -n id-sync get jobs`
- \* `oc -n id-sync logs job/ <job-name >`

### NEW QUESTION # 37

Configure and synchronize OpenShift groups from LDAP (group sync)

Task Information : Create an LDAP group-sync config, run a one-time sync, and confirm groups exist in OpenShift.

#### Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- \* Create a group sync config file (example `groupsync.yaml`)
- \* This file defines how OpenShift queries LDAP for groups and members.
- \* Run a one-time group sync
- \* `oc adm groups sync --sync-config=groupsync.yaml --confirm`
- \* `--confirm` actually applies changes (without it, it's a dry-run preview).
- \* Verify groups created/updated
- \* `oc get groups`
- \* `oc describe group <groupname >`
- \* Confirms group objects exist and membership is present.

### NEW QUESTION # 38

.....

The EX380 examination time is approaching. Faced with a lot of learning content, you may be confused and do not know where to start. EX380 test preps simplify the complex concepts and add examples, simulations, and diagrams to explain anything that may be difficult to understand. You can more easily master and simplify important test sites with EX380 learn torrent. In addition, please be assured that we will stand firmly by every warrior who will pass the exam. Click on the login to start learning immediately with EX380 test preps. No need to wait.
