

Exam Nutanix NCP-EUC Review & NCP-EUC Test Testking

DOWNLOAD the newest Actual4dump NCP-EUC PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=17C7zIyP0kBRo623lGwkrIgc2Bl0_7kWM

There are a lot of leading experts and professors in different field in our company. The first duty of these leading experts and professors is to compile the NCP-EUC exam questions. In order to meet the needs of all customers, the team of the experts in our company has done the research of the NCP-EUC study materials in the past years. As a result, they have gained an in-depth understanding of the fundamental elements that combine to produce world class NCP-EUC practice materials for all customers.

The NCP-EUC Exam covers a wide range of topics, including Nutanix architecture, virtualization, networking, storage, and security. It also covers the deployment of virtual desktop infrastructure (VDI) solutions, including Nutanix Frame, Citrix Virtual Apps and Desktops, and VMware Horizon. Candidates will be tested on their ability to deploy and manage these solutions, as well as troubleshoot common issues that may arise.

2026 Newest NCP-EUC: Exam Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Review

Our NCP-EUC latest exam torrents are your best choice. I promise you that you can learn from the NCP-EUC exam questions not only the knowledge of the certificate exam, but also the ways to answer questions quickly and accurately. Our NCP-EUC exam questions just need students to spend 20 to 30 hours practicing on the platform which provides simulation problems, can let them have the confidence to pass the NCP-EUC Exam, so little time great convenience for some workers, how efficiency it is.

The NCP-EUC Exam covers a wide range of topics related to end-user computing, including desktop virtualization, application delivery, user experience, and security. Candidates are required to have a deep understanding of Nutanix VDI components, such as Acropolis Hypervisor, Citrix Virtual Apps and Desktops, and VMware Horizon. Additionally, candidates must be familiar with Nutanix's solutions for user profile management, application layering, and endpoint security.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q91-Q96):

NEW QUESTION # 91

An administrator receives many complaints about increased boot times from a WI user over the past few days. Upon further review, the administrator discovers delays in the deployments of VDI desktops. The administrator could not find any indications that the cluster resources are insufficient.

What should the administrator verify to resolve this issue?

- A. If Memory Overcommitment was disabled
- B. Erasure Coding was disabled
- C. If a node failed
- D. If Shadow Clone was disabled

Answer: D

Explanation:

Shadow Clones are a feature of the AOS storage that enables distributed caching of virtual disks (vDisks) that are read by multiple VMs on different nodes. This can improve performance and reduce network traffic in scenarios such as VDI deployments. Therefore, if Shadow Clones were disabled, it could cause delays in the deployments of VDI desktops, as they would have to read the vDisk from a remote node instead of a local cache.

NEW QUESTION # 92

An administrator has been tasked with deploying different applications to different user groups in the environment, while minimizing storage impact. Some applications are web-based, while some require traditional installations.

Which method would best meet the goals?

- A. Use Citrix App Layering and deploy an ELM virtual appliance.¹
- B. Deploy necessary applications via GPO when users login.
- C. Implement Nutanix Flow and an ID-based VDI Security Group.
- D. Share a common desktop image containing all applications.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Citrix App Layering on Nutanix reference architectures:

* Minimizing Storage: Citrix App Layering allows an administrator to capture applications in separate virtual disks ("App Layers") that are stored once and then dynamically merged with a base OS layer to create layered images.² This avoids the storage bloat of installing every application into a single "Gold Image" or creating dozens of unique images for every department.

* ELM Role: The Enterprise Layer Manager (ELM) is the virtual appliance required to manage this layering environment.³ It orchestrates the creation of layers and the publishing of images.

* Targeting User Groups: By using Elastic Layering (a feature of App Layering), specific app layers can be delivered to users based on their Active Directory group membership at login, fulfilling the requirement to deploy "different applications to different user groups" without installing them permanently in the base image.

NEW QUESTION # 93

A company is deploying a Nutanix VDI solution across multiple data centers and will be using Files for their profile\home directories. The company requires that users be able to access profile\home from a local Files cluster at the designated data center they will be logging into, based on the location they are working out of that day.

How can the administrator ensure that the solution meets the stated requirements?

- A. use Nutanix Advanced File Replication
- B. use Nutanix Protection Domains for replication.
- C. use Zetro software to replicate
- D. use PeerSync software to replicate.

Answer: A

Explanation:

Nutanix Files offers a feature called Smart DR, which enables share-level replication between active file server instances for disaster recovery.

Smart DR allows administrators to configure replication policies for each share, such as replication interval, retention period, and bandwidth limit.

Smart DR also supports failover and fallback operations between source and target file servers in case of a disaster.

According to Nutanix best practices¹, Smart DR is suitable for scenarios where users need to access their files from different

locations or data centers.

NEW QUESTION # 94

In a VMware Horizon environment running on Nutanix, an administrator has noticed that create, start, shut down, and delete operations are taking longer than expected, the environment is currently configured with one vCenter instance and has 10,000 virtual desktops. What is the recommended number of vCenter instances in this configuration?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

vCenter can execute approximately 640 concurrent operations before incoming requests are queued, and can support up to 2,000 concurrent sessions¹. VMware Horizon 8 can support up to 120,000 active sessions in a Cloud Pod Architecture pod federation²³. Therefore, if the environment has 10,000 virtual desktops, one vCenter instance might not be enough to handle all the operations and sessions efficiently. The recommended number of vCenter instances in this configuration is B (2).

NEW QUESTION # 95

An administrator receives reports that members in a delivery group that recently had a new gold image applied are being prompted to restart their non-persistent desktops in the middle of the workday.

Which setting in the recently applied gold image does the administrator need to address to resolve this issue?

- A. The Windows power profile settings are improperly configured.
- B. Java is checking for updates every 24 hours.
- C. Windows Update policy is set to Automatic.
- D. The mandatory user profile is set to wrong profile extension.

Answer: C

Explanation:

In a non-persistent VDI environment, changes to the operating system should only occur within the Golden Image (or Master Image), not on the individual provisioned VMs. If the Windows Update policy is set to Automatic within the Gold Image, the clones generated from that image will independently check for updates, download them, and attempt to install them during the user's session.

This behavior often triggers a "Restart Required" prompt to the end-user to finish installing the updates. To prevent this disruption and ensure version consistency, Nutanix and VDI best practices dictate that the Windows Update service should be disabled or set to Manual in the Gold Image. Updates should be applied administratively to the Gold Image during a maintenance window, followed by a recompose/update of the machine catalog.

NEW QUESTION # 96
