Reliable H13-321_V2.5 Exam Blueprint - HCIP-AI-EI Developer V2.5 Realistic Real Torrent

Do you still worry about that you can't find an ideal job and earn low wage? You can try to obtain the H13-321_V2.5 certification and if you pass the H13-321_V2.5 exam you will have a high possibility to find a good job with a high income. If you buy our H13-321_V2.5 questions torrent you will pass the exam easily and successfully. Our H13-321_V2.5 Study Materials are compiled by experts and approved by professionals with experiences for many years. The high quality of our H13-321_V2.5 exam questions can help you pass the H13-321_V2.5 exam easily.

Huawei HCIP-AI-EI Developer V2.5 Sample Questions (Q56-Q61):

NEW QUESTION # 56

In 2017, the Google machine translation team proposed the Transformer in their paper Attention is All You Need. In a Transformer model, there is customized LSTM with CNN layers.

- A. FALSE
- B. TRUE

Answer: A

Explanation:

The Transformer architecture introduced in 2017 eliminates recurrence (RNN) and convolution entirely, relying solely on self-attention mechanisms and feed-forward layers. It does not contain LSTM or CNN components, which distinguishes it from previous sequence models.

Exact Extract from HCIP-AI EI Developer V2.5:

"The Transformer architecture does not use RNNs or CNNs. It relies entirely on self-attention and feed-forward networks for

NEW QUESTION # 57

If OpenCV is used to read an image and save it to variable "img" during image preprocessing, (h, w) = img.shape[:2] can be used to obtain the image size.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

In OpenCV, an image read into a variable such as img is represented as a NumPy array. The .shape attribute returns the dimensions in the format (height, width, channels). Using img.shape[:2] slices the first two elements, giving the height (h) and width (w). This method is a standard practice for quickly retrieving image dimensions in preprocessing workflows.

Exact Extract from HCIP-AI EI Developer V2.5:

"OpenCV stores images as NumPy arrays. The shape property returns (height, width, channels). Accessing shape[:2] returns the image height and width." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Image Reading and Writing with OpenCV

NEW QUESTION # 58

Which of the following applications are supported by ModelArts ExeML?

- A. Automatic offering classification
- B. Anomalous sound detection in production or security scenarios
- C. Predictive maintenance of manufacturing equipment
- D. Dress code conformance monitoring in campuses

Answer: A,B,C,D

Explanation:

ModelArtsExeML(Expert Experience Machine Learning) enables users without programming expertise to build AI models through a visual interface. It supports multiple application scenarios, including:

- * Predictive maintenance in manufacturing to detect potential equipment failures.
- * Monitoring compliance with dress codes in school or workplace settings.
- * Detecting unusual sounds in manufacturing or security contexts.
- * Classifying offerings automatically in e-commerce or retail systems.

Exact Extract from HCIP-AI EI Developer V2.5:

"ModelArts ExeML supports intelligent applications in industrial maintenance, campus security, sound anomaly detection, and automated product classification." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: ModelArts ExeML Application Scenarios

NEW QUESTION # 59

The natural language processing field usually uses distributed semantic representation to represent words.

Each word is no longer a completely orthogonal 0-1 vector, but a point in a multi-dimensional real number space, which is specifically represented as a real number vector.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

Traditional word representations like one-hot vectors are sparse and orthogonal, failing to capture semantic similarities. Distributed semantic representations(word embeddings) map words to dense, continuous vectors in a multi-dimensional space where similar words have similar vector representations. This approach enables better generalization and semantic reasoning in NLP tasks.

Exact Extract from HCIP-AI EI Developer V2.5:

"Distributed semantic representation maps words to dense real-valued vectors in continuous space, allowing semantic similarity to be

captured in vector geometry." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Word Vector Representation

NEW QUESTION # 60

The mAP evaluation metric in object detection combines accuracy and recall.

- A. FALSE
- B. TRUE

Answer: A

Explanation:

The mAP (mean Average Precision) metric in object detection combines precision and recall, not accuracy and recall. mAP is calculated by averaging the Average Precision (AP) across all classes in a dataset. Precision measures how many predicted positives are correct, while recall measures how many actual positives are identified. Accuracy, on the other hand, is a general metric for classification tasks and is less suitable for object detection where class imbalance and localization are important.

Exact Extract from HCIP-AI EI Developer V2.5:

"mAP evaluates object detection performance by considering both precision and recall across all classes, providing a balanced measure of detection accuracy and completeness." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Object Detection Metrics
