

SureTorrent Dumps Save Your Money with Up to one year of Free Updates

P.S. Free 2026 International Code Council Fire-Inspector-II dumps are available on Google Drive shared by SureTorrent:
<https://drive.google.com/open?id=1AzgOR1lko180oidImCVu0a1Q9wOLCj5m>

SureTorrent insists on providing you with the best and high quality exam dumps, aiming to ensure you 100% pass in the actual test. Being qualified with International Code Council certification will bring you benefits beyond your expectation. Our International Code Council Fire-Inspector-II practice training material will help you to enhance your specialized knowledge and pass your actual test with ease. Fire-Inspector-II Questions are all checked and verified by our professional experts. Besides, the Fire-Inspector-II answers are all accurate which ensure the high hit rate.

To some extent, to pass the Fire-Inspector-II exam means that you can get a good job. The Fire-Inspector-II exam materials you master will be applied to your job. The possibility to enter in big and famous companies is also raised because they need outstanding talents to serve for them. Our Fire-Inspector-II Test Prep is compiled elaborately and will help the client a lot. Our product is of high quality and the passing rate and the hit rate are both high.

>> Official Fire-Inspector-II Study Guide <<

Valid Test International Code Council Fire-Inspector-II Bootcamp & Valid Test Fire-Inspector-II Testking

Our Fire-Inspector-II training prep was produced by many experts, and the content was very rich. At the same time, the experts constantly updated the contents of the study materials according to the changes in the society. The content of our Fire-Inspector-II study guide is definitely the most abundant. Before you go to the exam, our Fire-Inspector-II Exam Questions can provide you with the simulating exam environment. This not only includes the examination process, but more importantly, the specific content of the exam. In previous years' examinations, the hit rate of Fire-Inspector-II learning quiz was far ahead in the industry.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q64-Q69):

NEW QUESTION # 64

All new building construction must have installed an approved water supply for fire protection which provides a minimum of:

- A. the required fire flow for fire protection.
- B. a static pressure of 40 psi at each hydrant.
- C. a static pressure of 60 psi at each hydrant.
- D. 250 gal. per minute at the fire-access outlet.

Answer: A

Explanation:

All new building construction must have an approved water supply that meets the minimum fire flow requirements necessary for fire

protection. The exact fire flow depends on factors such as building size, occupancy type, construction materials, and hazard levels.
Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 507.1 (Required Water Supply) IFC 507.1 states that an approved water supply capable of providing the required fire flow must be installed in all new construction projects.

The required fire flow varies based on building classification and must be determined by the authority having jurisdiction (AHJ).

2. 2021 IFC - Appendix B (Fire-Flow Requirements for Buildings)

Table B105.1(2) provides fire flow requirements based on construction type and building area.

Fire flow must be calculated according to the ISO (Insurance Services Office) Fire Suppression Rating Schedule.

Detailed Explanation of Answer Choices:

Option A (Correct): The fire flow requirement is determined based on the building and fire protection needs, making this the correct answer.

Option B (Incorrect): A static pressure of 40 psi at each hydrant is not a universal requirement, as fire flow is the primary factor.

Option C (Incorrect): A static pressure of 60 psi is not the fire code's general requirement; fire flow is the priority.

Option D (Incorrect): 250 gallons per minute (GPM) at a fire-access outlet is not an overall fire code requirement for all buildings-it depends on the structure's classification.

Thus, the correct and verified answer is: A. The required fire flow for fire protection.

NEW QUESTION # 65

The minimum allowable distance to a public traffic route for storage of 1,750 lb. of Class 1.3 explosives is ____ ft.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Reference to Explosive Storage Regulations:

The International Fire Code (IFC 2021), Section 5604 and NFPA 495 (Explosive Materials Code) regulate the storage distances for Class 1.3 explosives (which include low explosives such as propellants and display fireworks).

Table 5604.5.2(3) of the IFC provides minimum separation distances between explosives storage and public traffic routes based on the weight of the explosives.

Determining the Correct Distance:

According to IFC Table 5604.5.2(3), for 1,750 lb. of Class 1.3 explosives, the minimum separation distance from a public traffic route is 115 feet.

Clarification of Incorrect Answer Choices:

A: 50 ft. # Incorrect

50 feet is too close and does not meet the safety requirements for explosive storage.

B: 75 ft. # Incorrect

75 feet is insufficient based on IFC and NFPA separation tables.

D: 150 ft. # Incorrect

While more distance is safer, the minimum requirement is 115 feet, making 150 feet unnecessary per code.

Conclusion:

The correct and verified answer is C (115 feet) based on IFC Table 5604.5.2(3) and NFPA 495 requirements for Class 1.3 explosives storage near public traffic routes.

NEW QUESTION # 66

Horizontal exits shall not comprise more than ____ of the required exits from any floor area in a Group I-2 occupancy.

- A. 1/3
- B. 3/4
- C. 1/2
- D. 2/3

Answer: C

Explanation:

For Group I-2 occupancies (such as hospitals, nursing homes, and similar healthcare facilities), horizontal exits are used to improve fire safety by allowing occupants to move to a safer area without using stairs or elevators. IFC 2021, Section 1026.1 (Horizontal Exits - General Requirements) states that: Horizontal exits shall not comprise more than one-half (1/2) of the required exits from any floor area in a Group I-2 occupancy. This ensures that at least 50% of the required exits remain traditional vertical or exterior exits, maintaining a balance between horizontal and traditional egress routes.

NEW QUESTION # 67

Conditions that may exist and warrant a modification include all of the following except where the:

- **A. modification requires the use of an alternative building material.**
- B. special individual reason makes the strict letter of the code impractical.
- C. modification is in compliance with the intent and purpose of the code.
- D. modification does not lessen health, life, and fire safety.

Answer: A

Explanation:

Reference to Code Modifications and Equivalency Requirements:

According to International Fire Code (IFC 2021), Section 104.10, modifications may be granted if they meet the intent of the code and do not reduce fire and life safety.

The NFPA 1 (Fire Code) and NFPA 101 (Life Safety Code) also allow modifications under specific conditions, provided safety is maintained.

Understanding the Exception in the Question:

The question asks for conditions that DO NOT warrant a modification.

Using an alternative building material alone does not justify a modification unless it meets equivalent safety standards.

Code modifications are granted based on maintaining or improving safety, not simply changing materials.

Clarification of Incorrect Answer Choices:

A: Modification does not lessen health, life, and fire safety # Correct condition for modification, so incorrect answer IFC 104.10 allows modifications as long as safety is not compromised.

C: Modification is in compliance with the intent and purpose of the code # Correct condition for modification, so incorrect answer Codes provide flexibility if the intent of fire and life safety is still met.

D: Special individual reason makes the strict letter of the code impractical # Correct condition for modification, so incorrect answer Some codes allow modifications if strict compliance is impractical, provided alternative safety measures are implemented.

Conclusion:

The correct and verified answer is B (modification requires the use of an alternative building material) because material substitution alone does not justify a modification unless safety is maintained, as per IFC 104.10 and NFPA standards.

NEW QUESTION # 68

Quantities of flammable liquid storage in a control area of an S Occupancy may be doubled when:

- **A. the building is protected with automatic sprinklers.**
- B. the control area exceeds 50,000 sq. ft.
- C. the control area is provided with exhaust ventilation in accordance with fire code requirements.
- D. permission is granted by the chief.

Answer: A

Explanation:

The storage of flammable liquids in control areas within an S Occupancy (Storage Occupancy) is governed by the 2021 International Fire Code (IFC), Section 5003 - Hazardous Materials, and Table 5003.1.1(1).

IFC Section 5003.1.1(1) - Maximum Allowable Quantity (MAQ) Adjustments:

The maximum allowable quantity (MAQ) of flammable liquids in a control area may be doubled if an approved automatic sprinkler system is installed throughout the building.

Why Other Options Are Incorrect?

A). Permission is granted by the chief.

Fire officials can enforce code requirements but do not have the authority to override MAQ limits unless explicitly allowed in the code.

B). The control area exceeds 50,000 sq. ft.

The code does not specify an increase based solely on size; the sprinkler system is the determining factor.

D). The control area is provided with exhaust ventilation in accordance with fire code requirements.

While ventilation is important for hazardous material safety, it does not allow for an increase in the maximum storage quantity.

Correct answer: C. The building is protected with automatic sprinklers.

NEW QUESTION # 69

.....

The rapid development of information will not infringe on the learning value of our Fire-Inspector-II study materials, because our customers will have the privilege to enjoy the free update for one year. You will receive the renewal of Fire-Inspector-II study materials through the email. And our Fire-Inspector-II study materials have three different version can meet your demands. Firstly, PDF version is easy to read and print. Secondly software version does not limit to the number of installed computers, and it simulates the Real Fire-Inspector-II Exam environment, but it can only run on Windows operating system.

Valid Test Fire-Inspector-II Bootcamp: <https://www.suretorrent.com/Fire-Inspector-II-exam-guide-torrent.html>

You will find them to be very Fire-Inspector-II helpful and precise in the subject matter since all the International Code Council Fire-Inspector-II exam content is regularly updated and has been checked for accuracy by our team of International Code Council expert professionals, We are strict with education experts in providing stable and high-quality Fire-Inspector-II test dump all the time, International Code Council Official Fire-Inspector-II Study Guide You can set the learning format that best matches your schedule and learning style.

Adjusting Color Balance Using Color, Fix stuff you can't do on set and create the look, You will find them to be very Fire-Inspector-II helpful and precise in the subject matter since all the International Code Council Fire-Inspector-II Exam content is regularly updated and has been checked for accuracy by our team of International Code Council expert professionals.

Well-Prepared Official Fire-Inspector-II Study Guide & Complete International Code Council Certification Training - Professional International Code Council 67 - Fire Inspector II Exam

We are strict with education experts in providing stable and high-quality Fire-Inspector-II test dump all the time, You can set the learning format that best matches your schedule and learning style.

You can check your email and download the latest 67 - Fire Inspector II Exam Fire-Inspector-II vce torrent, But if you want to get a International Code Council certification, you must pass the exam.
