GARP Sustainability and Climate Risk Sample Questions (Q81-Q86):

NEW QUESTION # 81

An EU vehicle braking system manufacturer implements a new sustainability framework for SLBs to finance projects with environmental and social benefits. The company sustainability team prepares a new SLB and submits the bond to an external reviewer for assessment. The bond contains four KPIs:

1. Scope 1 CO2 emissions
2. Supplier engagement on GHG emission reduction
3. Percentage of renewable energy used
4. Percentage of women in managerial roles

The bond benchmark year is 2022 and the bond will mature in 2030 Which of the following SPTs did the reviewer find aligns with the core components of SLB Principles?

- A. Increase women representation in managerial positions to 33% by 2025 and to 50% by 2030.
- B. Increase renewable energy use to 20% by 2035 and to 50% by 2050.
- C. Reduce emissions from purchased raw materials by 60% by 2030.
- D. Engage multiple suppliers to expand commitment to emission reduction targets by 30% by 2030.

Answer: A

NEW QUESTION # 82

In response to consumer demand for eco-friendly products, a global personal care company develops a net-zero transition plan. The company sustainability team recommends an appropriate carbon accounting method for the plan. Which of the following country-level emission accounting methods is most likely recommended and why?

- A. Consumption-based accounting to calculate the carbon footprint of the entire product life cycle
- B. Consumption-based accounting to specifically measure emissions from supply chain imports
- C. Production-based accounting to highlight GHG emission reduction in operations
- D. Production-based accounting to measure GHG emissions regardless of location

Answer: A

NEW QUESTION # 83

To inform climate policy in a European country, a coalition of government scientists prepares a report on future climate conditions. Within the report, the scientists summarize how positive feedback loops accelerate the rate of climate change. Which feedback loop will the scientists most likely include in the coalition report?

- A. Rising sea levels increase the total mass of global oceans, leading to increased oceanic carbon absorption and growing calcification for sea life.
- B. Melting sea ice increases solar energy reflection, which intensifies the albedo in polar regions and leads to more global warming.
- C. Warmer air temperatures can hold higher amounts of water vapor, leading to higher temperatures and increased water vapor.
- D. Thawing permafrost near polar regions absorbs CO₂ which slows global warming and increases thawing.

Answer: C

NEW QUESTION # 84

A senior portfolio analyst at a global asset management firm performs a portfolio review to identify assets that may be affected by climate risk. Preliminary findings show the firm heavily invests in food and beverage companies with high climate risk exposure due to extreme temperatures and droughts. In a report to senior management, the analyst notes the firm can improve portfolio performance by examining physical risk, as the firm currently focuses primarily on transition risk.

Which approach to examining physical risk at the portfolio level should the analyst recommend?

- A. Best- and worst-in class of an index
- B. Downscaled global climate modeling
- C. "Warming potential" measurement on portfolios
- D. Temperature score methodology

Answer: A

NEW QUESTION # 85

A global logistics company evaluates how climate change could disrupt its global distribution network. The CSO recommends a scenario analysis exercise to explore long-term risks and opportunities. Which of the following variables should the company include to effectively develop climate scenarios?

- A. Marketing strategies to promote net-zero transition plans for logistics sectors
- B. Projected frequency of extreme weather events affecting supply routes
- C. Past market trends in global shipping demand
