With Salesforce MuleSoft-Integration-Associate Real Questions Nothing Can Stop You from Getting Success

Our website offer a smart and cost-efficient way to prepare MuleSoft-Integration-Associate exam tests and become a certified IT professional in the IT field. There are MuleSoft-Integration-Associate free download study materials for you before purchased and you can check the accuracy of our MuleSoft-Integration-Associate Exam Answers. We not only offer you 24/7 customer assisting support, but also allow you free update MuleSoft-Integration-Associate test questions after payment.

Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39
Which Exchange asset type represents a complete API specification in RAML or OAS format?

- A. SOAP APIs
- B. API Spec Fragments
- C. REST APIs
- D. Connectors

Answer: C

Explanation:
In Anypoint Exchange, a REST API asset represents a complete API specification in RAML (RESTful API Modeling Language) or OAS (OpenAPI Specification) format. Here's a detailed explanation:
* REST APIs:
* Definition: REST APIs are application programming interfaces that adhere to the principles of REST, allowing interaction with RESTful web services.
* Specifications: Typically defined using RAML or OAS to describe the API's endpoints, methods, request/response structures, and security protocols.
* Asset Types in Anypoint Exchange:
* REST APIs: Represent the full API specification, including all necessary details for developers to understand and use the API.
* SOAP APIs: Define APIs following the SOAP protocol, often using WSDL.
* Connectors: Provide pre-built connectivity to various systems and services.
* API Spec Fragments: Reusable pieces of an API specification, such as data types or security schemes, that can be included in full API specifications.
* Usage:
* Discoverability: Developers can easily discover, review, and reuse these API specifications in their projects.
* Documentation: Provides comprehensive documentation generated from the API specification, ensuring consistency and clarity.
References
* MuleSoft Documentation: REST APIs in Exchange
* RAML and OAS:RAML,OpenAPI

NEW QUESTION # 40
A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.
Which Anypoint Platform component should the administrator use to obtain this information?

* A. Audit Logging
* B. Anypoint Monitoring
* C. Anypoint Studio
* D. Mule Stack Traces

Answer: A

Explanation:
Anypoint Platform provides various tools and components for managing and monitoring the platform and its activities. To determine when permissions were last changed for an Anypoint Platform user, Audit Logging is the appropriate component to use. Here's a detailed explanation:
* Audit Logging:
* Purpose: Audit logs capture detailed records of user activities and changes within the Anypoint Platform, including permission changes.
* Access: Administrators can access audit logs through the Anypoint Platform's management console.
* Information Captured:
* User Actions: Logs include information about user logins, permission changes, API deployments, and other critical actions.
* Timestamp: Each log entry is timestamped, providing the exact time and date when the permissions were changed.
* Use Case:
* Monitoring and Security: Audit logs are crucial for monitoring platform activities, ensuring compliance, and investigating security incidents.
References
* MuleSoft Documentation: Anypoint Platform Audit Logging

NEW QUESTION # 41
According to MuleSoft a synchronous invocation of a RESTful API using HTTP to gel an individual customer record from a single system is an example of which system integration interaction pattern?

* A. Multicast
* B. Batch
* C. Request-Reply
* D. One-way

Answer: C

Explanation:
In system integration, different interaction patterns are used depending on the communication requirements between systems. For a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system, the Request-Reply pattern is used. Here's a detailed explanation:
* Request-Reply Pattern:
* Definition: This pattern involves a client sending a request to a server and waiting for a reply.
The communication is synchronous, meaning the client waits for the server to process the request and send back the response.
* Typical Use Case: It is used when immediate feedback is required from the server, such as retrieving a specific customer record.
* RESTful API and HTTP:
* Synchronous Communication: HTTP is inherently synchronous, making it suitable for Request- Reply interactions where the client expects an immediate response.
* Data Retrieval: Commonly used for GET requests in RESTful APIs to retrieve data from a server.
* Example:
* Scenario: A client application requests customer details by making a GET request to a RESTful API endpoint. The server processes the request and returns the customer record.
References
* MuleSoft Documentation: Integration Patterns
* REST API Design: Request-Reply Pattern

NEW QUESTION # 42
A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.
Which Anypoint Platform component should the administrator use to obtain this information?

- A. Audit Logging
- B. Anypoint Monitoring
- C. Anypoint Studio
- D. Mule Stack Traces

Answer: A

NEW QUESTION # 43
An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.
According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business
- B. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- C. Hire more IT developers, architects, and project managers to increase IT delivery
- D. Switch from a design-first to a code-first approach for IT development

Answer: A

Explanation:
MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation.
Here's a detailed explanation:
* Decoupling Core IT Projects:
* Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.
* Benefits:
* Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.
* Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.
* Implementation:
* API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

* Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.
* Outcome:
* Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.
* Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.
