

JN0-351자격증문제최신덤프는Enterprise Routing and Switching, Specialist (JNCIS-ENT)시험의최고의공부자료

참고: DumpTOP에서 Google Drive로 공유하는 무료 2026 Juniper JN0-351 시험 문제집이 있습니다:
<https://drive.google.com/open?id=1TVwuQ6s1u9suXea1dx4dyU7oZkHvDjH>

DumpTOP는 전문적인 IT인증시험덤프를 제공하는 사이트입니다. JN0-351인증시험을 패스하려면 아주 현명한 선택입니다. DumpTOP에서는 JN0-351 관련 자료도 제공함으로 여러분처럼 IT 인증시험에 관심이 많은 분들한테 아주 유용한 자료이자 학습가이드입니다. DumpTOP는 또 여러분이 원하도 필요로 하는 최신 최고버전의 JN0-351 문제와 답을 제공합니다.

Juniper JN0-351 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> IS-IS: Aspiring Juniper networking professionals enhance their understanding of IS-IS routing protocols. This topic equips candidates with the knowledge to configure and monitor IS-IS systems, addressing specific exam challenges and practical applications.
주제 2	<ul style="list-style-type: none"> Layer 2 Switching or VLANs: This topic deepens the understanding of Layer 2 switching operations within the Junos OS, including VLAN concepts and benefits. Experienced networking professionals gain insights into configuration, monitoring, and troubleshooting techniques essential for network segmentation and efficiency.
주제 3	<ul style="list-style-type: none"> High Availability: This topic covers the importance and application of high availability within Junos OS environments. Knowledge in configuring and managing these components is critical for ensuring robust and uninterrupted network operations, aligning with exam expectations.
주제 4	<ul style="list-style-type: none"> BGP: This topic focuses on the operational and conceptual elements of BGP, a cornerstone in enterprise networks.

JN0-351최고품질 인증시험 기출문제 & JN0-351시험대비 최신 덤프문제

우리DumpTOP 에서 제공하는 학습가이드에는 IT전문가들이 만들어낸 시험대비 자료들과 Juniper JN0-351인증시험의 완벽한 문제와 답들입니다. 그리고 우리DumpTOP에서는 IT업계에서의 높은 신뢰감으로 여러분들한테 100%보장을 드립니다. 우리에게 믿음을 드리기를 위하여 Juniper JN0-351관련자료의 일부분 문제와 답 등 샘플을 무료로 다운받아 체험해볼수 있게 제공합니다.

최신 JNCIS-ENT JN0-351 무료샘플문제 (Q18-Q23):

질문 # 18

Which two statements are true about an EX2300 device? (Choose two.)

- A. By default, all switch ports are trunk ports.
- B. By default, all switch ports are associated with the default VLAN.
- C. By default, all switch ports are access ports.
- D. By default, trunk ports can carry untagged traffic.

정답: B,C

질문 # 19

Which two statements are correct about generated routes? (Choose two.)

- A. Generated routes cannot be redistributed into dynamic routing protocols.
- B. Generated routes show a next hop in the routing table.
- C. Generated routes appear in the routing table as static routes
- D. Generated routes require a contributing route.

정답: B,D

설명:

A is correct because generated routes require a contributing route. A contributing route is a route that matches the destination prefix of the generated route and has a valid next hop. A generated route is only installed in the routing table if there is at least one contributing route available. This ensures that the generated route is reachable and useful. If there is no contributing route, the generated route is not added to the routing table.

B is correct because generated routes show a next hop in the routing table. A generated route inherits the next hop of its primary contributing route, which is the most preferred route among all the contributing routes. The next hop of the generated route can be either an IP address or an interface name, depending on the type of the contributing route. The next hop of the generated route can also be modified by a routing policy.

질문 # 20

What is the default hello interval on an OSPF interface?

- A. 20 seconds
- B. 10 seconds
- C. 30 seconds
- D. 60 seconds

정답: B

설명:

The default hello interval on an OSPF interface depends on the network type of the interface. For point-to-point and broadcast network types, the default hello interval is 10 seconds. For non-broadcast and point-to-multipoint network types, the default hello interval is 30 seconds. The hello interval is the time between sending hello packets to establish and maintain neighbor adjacencies.

The hello interval can be configured manually on each interface using the ip ospf hello-interval command. References:

질문 # 21

Which two multicast IP addresses are used for link-state update packets? (Choose two.)

- A. 224.0.0.5

- B. 224.0.0.9
- C. 224.0.0.6
- D. 224.0.0.10

정답: A,C

설명:

Link-state update packets are used to flood link-state advertisements (LSAs) among OSPF routers. The destination IP address of these packets depends on the network type and the state of the interface. On broadcast and point-to-point networks, OSPF uses two IP multicast addresses: 224.0.0.5 for all OSPF routers and 224.0.0.6 for all designated routers (DRs) and backup designated routers (BDRs)¹². If the interface state is DR or BDR, the link-state update packets are sent to 224.0.0.5. Otherwise, they are sent to 224.0.0.6. On non-broadcast networks, such as Frame Relay or ATM, link-state update packets are sent as unicasts to each adjacent neighbor³. Therefore, the correct answer is A and D. 질문 # 22

Exhibit

You are receiving the BGP route shown in the exhibit from four different upstream ISPs. Referring to the exhibit, which ISP will be selected as the active path?

- A. ISP 4
- B. ISP 2
- C. ISP 3
- D. ISP1

정답: A

설명:

Explanation

In BGP, the path selection process is based on a set of attributes¹. The process starts by preferring the path with the highest weight, then the highest local preference, then the locally originated routes, and so on¹. If all these attributes are the same, then it prefers the path with the shortest AS path¹.

Referring to the exhibit, all four ISPs have the same weight, local preference, and origin¹. However, ISP 4 has the shortest AS path¹. Therefore, ISP 4 will be selected as the active path. So, option C is correct.

질문 # 23
