

2V0-11.25 Free Updates | New 2V0-11.25 Test Pattern

2V0-11.25	
Exam Code:	2V0-11.25
Number of Questions:	70
Duration:	135 minutes
Passing Score:	300 (on a scaled score of 100-500)
Exam Fee:	\$250 USD

2026 Latest PassCollection 2V0-11.25 PDF Dumps and 2V0-11.25 Exam Engine Free Share: <https://drive.google.com/open?id=1yStJmq3-JuSTzMnOB6r92NPuvagCaKj>

A full VMware 2V0-11.25 package is required to take each Success in Life. If you want to be successful, you need to prepare well for the VMware Cloud Foundation 5.2 Administrator 2V0-11.25 exam. Buying the right VMware 2V0-11.25 Exam Preparation Materials is one way to prepare for it. With the right study tools, you can easily prepare for the VMware Cloud Foundation 5.2 Administrator. Whether you want to study VMware 2V0-11.25 Exam or pass other VMware Cloud Foundation 5.2 Administrator exam, if you want to prepare for VMware 2V0-11.25 exam, you can choose VMware 2V0-11.25 Valid Exam Questions exam.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and networkstorage design.
Topic 2	<ul style="list-style-type: none">Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 3	<ul style="list-style-type: none">Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
Topic 4	<ul style="list-style-type: none">IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.

Topic 5	<ul style="list-style-type: none"> VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.

VMware 2V0-11.25 Exam Dumps Help You Achieve Success Faster

As a professional multinational company, we fully take into account the needs of each user when developing products. For example, in order to make every customer can purchase at ease, our 2V0-11.25 study materials will provide users with three different versions for free trial, corresponding to the three official versions. You can feel the characteristics of our 2V0-11.25 Study Materials and whether they are suitable for you from the trial. After your payment, we'll send you a connection of our 2V0-11.25 study materials in 5 to 10 minutes and you can download immediately without wasting your valuable time.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q154-Q159):

NEW QUESTION # 154

An administrator has deployed a new VI Workload Domain and must deploy a Kubernetes cluster on the vSphere Supervisor. Which three steps should be followed to successfully deploy the Kubernetes cluster? (Choose three.)

- A. Deploy an NSX Edge Cluster.
- B. Create a new VM template for the Kubernetes nodes.
- C. Configure a vSphere Namespace and assign resource quotas.
- D. Enable Workload Management on the vSphere Cluster within SDDC Manager.
- E. Deploy a vSphere Pod Service.

Answer: A,C,D

Explanation:

According to the VMware Cloud Foundation 5.2 Administration Guide and the VMware vSphere with Tanzu Documentation, the deployment of a Kubernetes cluster on a vSphere Supervisor requires the following key steps:

A). Configure a vSphere Namespace and assign resource quotas. Exact Extract:

"After enabling workload management, you must create vSphere Namespaces to segment resources for Kubernetes workloads. Assigning resource quotas is required to control resource consumption within each namespace." (VMware vSphere with Tanzu Documentation - vSphere Namespaces) D). Deploy an NSX Edge Cluster. Exact Extract:

"An NSX Edge Cluster is required for Kubernetes networking and load balancing capabilities within the Supervisor Cluster." (VMware Cloud Foundation Administration Guide - Preparing for Workload Management) E). Enable Workload Management on the vSphere Cluster within SDDC Manager. Exact Extract:

"To use vSphere Supervisor and deploy Kubernetes clusters, enable Workload Management on the appropriate vSphere Cluster from within SDDC Manager." (VMware Cloud Foundation Administration Guide - Enabling Workload Management) Why Not the Other Options?

B: Deploying a vSphere Pod Service is optional and not a required step for deploying a standard Kubernetes cluster on Supervisor.

C: Creating a new VM template for Kubernetes nodes is not required; the Supervisor Cluster automatically manages the deployment and configuration of Kubernetes control plane and worker nodes.

Summary:

To successfully deploy a Kubernetes cluster on the vSphere Supervisor in a new VI Workload Domain, the administrator must:

Enable Workload Management (E),

Deploy an NSX Edge Cluster (D), and

Configure a vSphere Namespace with resource quotas (A). These steps are specified in the official VMware documentation.

NEW QUESTION # 155

An organization is planning to manage a diverse set of databases across multiple VMware Cloud Foundation (VCF) environments

using Data Services Manager.

Which three capabilities of Data Services Manager would help the organization managing these databases efficiently? (Choose three.)

- A. Automated database provisioning and deployment
- B. Centralized monitoring and alerting for all managed databases
- C. Integration with vSAN for optimized storage management
- D. Automated database migration between on-premises and cloud environments
- E. Policy-based backup and recovery for databases

Answer: A,B,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Data Services Manager provides several key capabilities that help organizations efficiently manage databases across VMware Cloud Foundation environments. The official documentation describes the following functions:

Centralized monitoring and alerting for all managed databases (A): Data Services Manager offers a single pane of glass for monitoring health, usage, and generating alerts for all databases under management.

Policy-based backup and recovery for databases (C): The platform allows administrators to define policies for backup and restore operations, ensuring data protection and compliance across all managed databases.

Automated database provisioning and deployment (E): Administrators can automate the deployment, scaling, and lifecycle management of databases, streamlining the operational process.

While Data Services Manager integrates with VMware storage and supports operational automation, it does not provide built-in, automated migration between on-premises and cloud environments, nor does it specifically require direct integration with vSAN for its optimized storage management features.

NEW QUESTION # 156

Which two operations can be completed in the SDDC Manager UI on an NSX Edge cluster after it has been deployed into a workload domain? (Choose two.)

- A. Sync
- B. Delete
- C. Expand
- D. Shrink
- E. Redeploy

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

After an NSX Edge cluster is deployed into a workload domain, SDDC Manager provides built in operations to adjust the cluster size. According to the VMware Cloud Foundation 5.2 documentation:

"After you create an NSX Edge cluster, you can use SDDC Manager to expand or shrink it by adding or deleting NSX Edge nodes." Breakdown of options:

B).Expand - You can add one or more Edge nodes to increase the cluster size.

E).Shrink - You can remove Edge nodes to decrease the cluster size.

These two actions are the only supported cluster scaling operations available in SDDC Manager post-deployment. Other operations-such as Redeploy, Sync, or Delete-are not available via the UI for a deployed Edge cluster and are either manual or unsupported in that context.

Summary:

Selected choices B and E match the documented capability to scale an NSX Edge cluster via SDDC Manager.

No other operations (A, C, D) are supported for an existing Edge cluster through the UI.

NEW QUESTION # 157

Which feature of VMware Lifecycle Manager allows an administrator to manage the lifecycle of ESXi hosts by applying a consistent image across the hosts in a cluster?

- A. Host Profiles
- B. Lifecycle Manager Images

- C. Update Manager Baselines
- D. vSphere Auto Deploy

Answer: B

Explanation:

VMware Lifecycle Manager (vLCM) enables administrators to manage the lifecycle of ESXi hosts by applying a consistent image across the hosts in a cluster. These images include the ESXi version, firmware, drivers, and settings, ensuring consistency and simplifying updates and patches across all hosts in a cluster.

NEW QUESTION # 158

An administrator is troubleshooting a high CPU usage issue in a VMware Cloud Foundation environment running IaaS Control Plane. Several namespaces are reporting degraded performance.

What two steps should the administrator take to diagnose and potentially resolve the issue? (Choose two.)

- A. Reconfigure the DRS settings to be more aggressive in load balancing.
- B. Reboot the supervisor cluster to clear any temporary issues.
- C. Check the resource limits and reservations set on the Kubernetes namespaces.
- D. Review the CPU usage of the ESXi hosts to identify any that are overcommitted.
- E. Upgrade the vSphere version to the latest release.

Answer: C,D

Explanation:

The administrator should review the CPU usage of the ESXi hosts to identify if any hosts are overcommitted. Overcommitted hosts can lead to performance degradation across workloads.

Checking the resource limits and reservations on Kubernetes namespaces is crucial. If the resource limits are too low or improperly configured, it could cause degraded performance for workloads running in those namespaces.

NEW QUESTION # 159

.....

This is a good way to purchase valid exam preparation materials for your coming 2V0-11.25 test. Good choice will make you get double results with half efforts. Good exam preparation will point you a clear direction and help you prepare efficiently. Our 2V0-11.25 exam preparation can not only give a right direction but also cover most of the real test questions so that you can know the content of exam in advance. You can master the questions and answers of VMware 2V0-11.25 Exam Preparation, even adjust your exam mood actively.
