最新的 Microsoft Azure Administrator Associate AZ-104 免費考試真題 (Q278-Q283):

問題 #278

You are evaluating the connectivity between the virtual machines after the planned implementation of the Azure networking infrastructure.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

☐

答案：

解題說明：

Explanation:

Once the VNets are peered, all resources on one VNet can communicate with resources on the other peered VNets. You plan to enable peering between Paris-VNet and AllOffices-VNet. Therefore VMs on Subnet1, which is on Paris-VNet and VMs on Subnet3, which is on AllOffices-VNet will be able to connect to each other.

All Azure resources connected to a VNet have outbound connectivity to the Internet by default. Therefore VMs on ClientSubnet, which is on ClientResources-VNet will have access to the Internet; and VMs on Subnet3 and Subnet4, which are on AllOffices-VNet will have access to the Internet.

問題 #279

You have an Azure subscription that contains the resources shown in the following table:

☐

You assign a policy to RG6 as shown in the following table:

☐

To RG6, you apply the tag: RGroup: RG6.

You deploy a virtual network named VNET2 to RG6.

Which tags apply to VNET1 and VNET2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

答案：

解題說明：

VNET1: Department: D1, and Label:Value1 only.

Tags applied to the resource group or subscription are not inherited by the resources.

Note: Azure Policy allows you to use either built-in or custom-defined policy definitions and assign them to either a specific resource group or across a whole Azure subscription.

VNET2: Label:Value1 only.

問題 #280

You have an Azure subscription that contains a storage account named storage1. The subscription is linked to an Azure Active Directory (Azure AD) tenant named contoso.com that syncs to an on-premises Active Directory domain.

The domain contains the security principals shown in the following table.

☐

In Azure AD, you create a user named User2.

The storage1 account contains a file share named share1 and has the following configurations.

☐

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

☐

問題 #281

You have an Azure Active Directory (Azure AD) tenant named contosocloud.onmicrosoft.com.

Your company has a public DNS zone for contoso.com.

You add contoso.com as a custom domain name to Azure AD.

You need to ensure that Azure can verify the domain name.

Which type of DNS record should you create?

- A. DNSKEY
- B. NSEC
- C. PTR
- **D. TXT**

答案： D

解題說明：

Explanation

TXT : Correct Choice

You need to go to your hosting domain registrar and add in a TXT record.

NSEC3 : Incorrect Choice

This is Part of DNSSEC. This is used for explicit denial-of-existence of a DNS record. It is used to prove a name does not exist.

RRSIG : Incorrect Choice

This contains a cryptographic signature.

DNSKEY : Incorrect Choice

This will verify that the records are originating from an authorized sender.

問題 #282

You need to recommend a solution for App1. The solution must meet the technical requirements. What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

答案：

解題說明：

Explanation

This reference architecture shows how to deploy VMs and a virtual network configured for an N-tier application, using SQL Server on Windows for the data tier.

Scenario: You have a public-facing application named App1. App1 is comprised of the following three tiers:

* A SQL database

* A web front end

* A processing middle tier

Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.

* Technical requirements include:

* Move all the virtual machines for App1 to Azure.

* Minimize the number of open ports between the App1 tiers.
