質問 # 368

Which task requires the use of AWS account root user credentials?

- A. The deletion of IAM users
- B. The creation of an organization in AWS Organizations
- C. The change to a different AWS Support plan
- D. The deletion of Amazon EC2 instances

正解: B

解説:

The creation of an organization in AWS Organizations requires the use of AWS account root user credentials. The AWS account root user is the email address that was used to create the AWS account. The root user has complete access to all AWS services and resources in the account, and can perform sensitive tasks such as changing the account settings, closing the account, or creating an organization. The root user credentials should be used sparingly and securely, and only for tasks that cannot be performed by IAM users or roles⁴

質問 # 369

A company is requesting Payment Card Industry (PCI) reports that validate the operating effectiveness of AWS security controls. How should the company obtain these reports?

- A. Download reports from AWS Security Hub.
- B. Contact AWS Support
- **C. Download reports from AWS Artifact.**
- D. Contact an AWS technical account manager (TAM).

正解: C

解説:

AWS Artifact is a service provided by AWS that offers on-demand access to AWS compliance reports, including the Payment Card Industry (PCI) reports. It is the primary tool for retrieving compliance reports such as Service Organization Control (SOC) reports, ISO certifications, and Payment Card Industry Data Security Standard (PCI DSS) reports.

To obtain these reports:

- * The company should log into the AWS Management Console and navigate to AWS Artifact.
- * From there, they can select and download the necessary compliance reports.

Why other options are not suitable:

- * A. Contact AWS Support: AWS Support is not needed to obtain these reports; they are readily available through AWS Artifact.
- * C. Download reports from AWS Security Hub: AWS Security Hub is a service that provides a comprehensive view of security alerts and compliance status, but it does not host or provide compliance reports like PCI DSS.
- * D. Contact an AWS technical account manager (TAM): While a TAM may assist in various AWS- related queries, they are not required to obtain PCI reports. AWS Artifact is designed for this purpose.
