CS6250 Exam 2 Study Guide 2025 – CN CS 6250 Comprehensive Review and Preparation Material

1. **L7: What spurred the development of Software Defined Networking (SDN)?**
   > SDN arose to make CN more programmable
   > Networks are complex/difficult to manage due to the diversity of equipment on the network and proprietary technologies for the equipment
   > These made them highly complex, slow to innovate, and drove up the costs of running a network.
   SDN divides the network into two planes (separation of tasks):
   1. control plane
   2. data plane.

2. **L7: What are the three phases in the history of SDN?**
   1. Active networks
   2. Control and data plane separation
   3. OpenFlow API and network operating systems

3. **L7: Summarize each phase in the history of SDN.**
   1. Active networks
   2. Control and data plane separation
   3. OpenFlow API and network operating systems

   Active networks
   > Researchers wanted to test new ideas to improve network services. This required standardization of new protocols by the IETF which was a slow/frustrating process.
   > More active networks which wanted to open up network control.
   > Community belief: simplicity of the network core was vital to internet success.

   The pushes that encouraged active networking:
   > Reduction in computation cost
   > PL Advancement (like java)
   > Advances in rapid code compilation and formal methods.

   Active networking envisioned unified control that could replace individually managing these boxes.
