

DCA Pass-Sure Materials: Docker Certified Associate (DCA) Exam - DCA Actual Test & DCA Test Torrent

BTW, DOWNLOAD part of Test4Sure DCA dumps from Cloud Storage: <https://drive.google.com/open?id=1OrhCXFFYEuda3ogD-Qtfhz8iHPdJoTFh>

These Docker DCA dumps are real, updated, and error-free. It provides you with the essential Docker DCA exam knowledge that you need to prepare and pass the Docker DCA certification test with high scores. You can easily use all these three Docker DCA Exam Questions format. These formats are compatible with all devices, operating systems, and the latest browsers.

For some candidates who are caring about the protection of the privacy, our DCA exam materials will be your best choice. We respect the personal information of our customers. If you buy DCA exam materials from us, we can ensure you that your personal information, such as the name and email address will be protected well. Once the order finishes, your personal information will be concealed. In addition, we are pass guarantee and money back guarantee. If you fail to pass the exam after buying DCA Exam Dumps from us, we will refund your money.

Latest DCA Exam Format | DCA Formal Test

The most distinguished feature of Test4Sure's study guides is that they provide you the most workable solution to grasp the core information of the certification syllabus in an easy to learn set of DCA study questions. Far more superior in quality than any online courses free, the questions and answers contain information drawn from the best available sources. They are relevant to the DCA Exam standards and are made on the format of the actual DCA exam.

Docker Certified Associate Certification Path

Docker Certified Associate Exam is associate level Certification. It is strongly recommended that aspirants for this exam should have a foundational level of knowledge about Docker containerization technology.

Individuals who earn the DCA Certification demonstrate that they possess the technical knowledge and skills required to run containerized applications using Docker. Docker Certified Associate (DCA) Exam certification exam covers a range of topics, including Docker basics, Docker image creation and management, Docker networking, Docker security, and Docker storage management. Candidates also need to possess an understanding of the Docker architecture, Docker command-line interface (CLI), Docker Compose, and Docker swarm mode.

Docker Certified Associate (DCA) Exam Sample Questions (Q61-Q66):

NEW QUESTION # 61

Is this a supported user authentication method for Universal Control Plane?

Solution.LDAP

- A. Yes

- B. No

Answer: A

Explanation:

Explanation

= LDAP is a supported user authentication method for Universal Control Plane (UCP). UCP has its own built-in authentication mechanism and integrates with LDAP and Active Directory. It also supports Role Based Access Control (RBAC) and Docker ContentTrust. UCP allows you to configure LDAP as an authentication method and connect it to your LDAP server. You need to provide the LDAP URL, the base DN, the bind DN and password, and the user and group search settings¹². References:

* SAML | Docker Docs

* Universal Control Plane overview | dockerlabs

NEW QUESTION # 62

Your organization has a centralized logging solution, such as Splunk.

Will this configure a Docker container to export container logs to the logging solution?

Solution: docker system events --filter splunk

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

= The solution will not configure a Docker container to export container logs to the logging solution, such as Splunk. The command `docker system events --filter splunk` is not a valid command to send logs to a remote destination. The `--filter` option for `docker system events` only accepts the following keys: `container`, `daemon`, `event`, `image`, `label`, `network`, `plugin`, `type`, and `volume`¹. `splunk` is not a valid key for filtering events. To configure a Docker container to export container logs to a logging solution, such as Splunk, you need to use the `--log-driver` and `--log-opt` options when creating or running the container². For example, to use the Splunk logging driver, you can use the following command:

```
docker run --log-driver=splunk --log-opt splunk-token=176FCEBF-4CF5-4EDF-91BC-703796522D20
--log-opt splunk-url=https://splunkhost:8088 ...
```

This command will send the container logs to the Splunk HTTP Event Collector (HEC) endpoint specified by the `splunk-url` option, using the authentication token provided by the `splunk-token` option³. You can also use other logging drivers, such as `syslog`, `fluentd`, `gelf`, etc., depending on your logging solution⁴. References:

* 1: `docker system events` | Docker Docs

* 2: Configure logging drivers | Docker Docs

* 3: Splunk logging driver | Docker Docs

* 4: Supported logging drivers | Docker Docs

NEW QUESTION # 63

Will this command display a list of volumes for a specific container?

Solution: `'docker container logs nginx -volumes'`

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

Using `docker container logs nginx --volumes` does not display a list of volumes for a specific container. The `docker container logs` command shows information about the logs of a container. The `--volumes` flag is not a valid option for this command and will cause an error. To display a list of volumes for a specific container, you need to use `docker container inspect nginx --format '{{ .Mounts }}`'. References:

https://docs.docker.com/engine/reference/commandline/container_logs/,

https://docs.docker.com/engine/reference/commandline/container_inspect/

NEW QUESTION # 64

A Kubernetes node is allocated a /26 CIDR block (64 unique IPs) for its address space.

If every pod on this node has exactly two containers in it, how many pods can this address space support on this node?

- A. 0
- B. 1
- C. 2
- D. 64 for every service routing to pods on this node
- E. 32 in every Kubernetes namespace

Answer: C

Explanation:

A Kubernetes node is allocated a /26 CIDR block (64 unique IPs) for its address space. This means that the node can assign up to 64 IP addresses to its resources, such as pods and containers. If every pod on this node has exactly two containers in it, then each pod will need two IP addresses, one for each container. Therefore, the node can support up to 32 pods, since $64 / 2 = 32$. The other options are incorrect because they either exceed the available IP addresses or do not account for the number of containers per pod. Reference:

* CIDR Blocks and Container Engine for Kubernetes - Oracle

NEW QUESTION # 65

In Docker Trusted Registry, is this how a user can prevent an image, such as 'nginx:latest', from being overwritten by another user with push access to the repository?

Solution: Keep a backup copy of the image on another repository.

- A. Yes
- B. No

Answer: B

Explanation:

= Keeping a backup copy of the image on another repository is not how a user can prevent an image, such as 'nginx:latest', from being overwritten by another user with push access to the repository. This approach does not prevent the original image from being overwritten, it only provides a way to restore it from another source.

However, this may not be reliable or efficient, as the backup repository may not be in sync with the original one, or may not be accessible at all times. To prevent an image from being overwritten by another user, the user can use the DTR web UI to make the tag immutable¹. This feature allows the user to lock a specific tag, so that no one can push a new image with the same tag to the repository. This ensures that the image is always consistent and secure¹. References:

* Make a tag immutable | Docker Docs

NEW QUESTION # 66

.....

Our Docker Certified Associate (DCA) Exam test torrent boost 99% passing rate and high hit rate so you can have a high probability to pass the exam. Our DCA study torrent is compiled by experts and approved by the experienced professionals. The questions and answers of our DCA study tool have simplified the important information and seized the focus and are updated frequently by experts to follow the popular trend in the industry. Because of these wonderful merits the client can pass the DCA Exam successfully with high probability.
