

DCA Reliable Exam Answers & DCA Latest Test Answers

DCA Final Exam Questions & Answers 2025/2026

It is important that every customer receives a warm greeting which includes your _____. - ANSWERSName

What should be offered to every customer who is purchasing an interior, or bought an interior through the super lane? - ANSWERSUnlimited

After identifying if the customer is an unlimited member, what should you be asking next? - ANSWERSFocus areas

When approaching the vehicle, which areas should you be observing on the exterior of the vehicle? Select all that apply: Scratches, headlights, make/model, license plate, windshield chips, clearcoat - ANSWERSScratches, headlights, windshield chips & clearcoat

True or false: If a customer does not have a focus, you do not have to offer any products or services. - ANSWERSFalse

What is the complementary service for any shampoo service? - ANSWERSFab protectant or headliner

What is the complementary service for a wax? - ANSWERSRim wax

What is the complementary service for a super interior? - ANSWERSVinyl

What is the complementary service for a carpet shampoo? - ANSWERSSeat shampoo

The content and design of our DCA learning quiz are all perfect and scientific, and you will know it when you use this. Of course, we don't need you to spend a lot of time on our DCA exam questions. As long as you make full use of your own piecemeal time after 20 to 30 hours of study, you can go to the exam. The users of our DCA Study Materials have been satisfied with their results. I believe you are the next person to pass the exam!

Docker Certified Associate (DCA) Certification Exam is a globally recognized certification program that validates the technical knowledge and skills required of Docker practitioners. Docker Certified Associate (DCA) Exam certification is offered by Docker, the popular containerization platform that enables developers to build, ship, and run containerized applications quickly and efficiently. The DCA certification exam is designed to test the knowledge and practical skills of Docker practitioners and managers to enable them to effectively work with and manage containerized applications.

Docker Certified Associate (DCA) Certification Exam is a highly sought-after certification in the field of containerization and container management. Docker is a widely used platform for building, deploying, and managing containerized applications. The DCA certification exam is designed to test the knowledge and skills of professionals working with Docker technologies. Docker Certified Associate (DCA) Exam certification validates the candidate's ability to design and deploy container-based applications and infrastructure.

The DCA Certification is offered by Docker, Inc., and it is recognized as a valuable credential by many organizations in the IT

industry. It is an entry-level certification, and it is ideal for professionals who want to demonstrate their competence in using Docker technology. Docker Certified Associate (DCA) Exam certification exam is conducted online, and it consists of 55 multiple-choice questions that need to be completed within 90 minutes. DCA exam fee is \$195 USD, and candidates who pass the exam are awarded the Docker Certified Associate (DCA) certificate.

DCA Latest Test Answers & Exam DCA Overview

The Docker DCA desktop practice exam software simulates a real test environment and familiarizes you with the actual test format. This Docker DCA practice exam software tracks your progress and performance, allowing you to see how much you've improved over time. We frequently update the Docker DCA Practice Exam software with the latest Docker DCA DUMPS PDF.

Docker Certified Associate (DCA) Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Your organization has a centralized logging solution, such as Splunk.

Will this configure a Docker container to export container logs to the logging solution?

Solution: Set the log-driver and log-opt keys to values for the logging solution (Splunk) In the daemon.json file.

- A. Yes
- B. No

Answer: A

Explanation:

Explanation

Setting the log-driver and log-opt keys to values for the logging solution (Splunk) in the daemon.json file will configure a Docker container to export container logs to the logging solution. This is because the Splunk logging driver sends container logs to the HTTP Event Collector in Splunk Enterprise and Splunk Cloud1. To use the Splunk driver as the default logging driver, set the keys log-driver and log-opt to appropriate values in the daemon.json configuration file and restart Docker1. To use the Splunk driver for a specific container, use the commandline flags --log-driver and log-opt with docker run1. The Splunk logging driver supports various options, such as splunk-token, splunk-url, splunk-source, splunk-sourcetype, splunk-index, etc1. References:

NEW QUESTION # 43

You are troubleshooting a Kubernetes deployment called api, and want to see the events table for this object. Does this command display it?

Solution: kubectl events deployment api

- A. No
- B. Yes

Answer: A

NEW QUESTION # 44

Does this command display all the pods in the cluster that are labeled as 'env: development'?

Solution: 'kubectl get pods --all-namespaces -l env=development'

- A. No
- B. Yes

Answer: A

Explanation:

The command 'kubectl get pods --all-namespaces -l env=development' does not display all the pods in the cluster that are labeled as 'env: development'. The reason is that the flag -l is not a valid option for kubectl get pods. The correct flag to use is --selector or -l, which allows you to filter pods by labels1. Labels are key-value pairs that can be attached to Kubernetes objects to identify,

group, or select them2. For example, to label a pod with env=development, one can run:

```
kubectl label pods my-pod env=development
```

To display all the pods that have the label env=development, one can run:

```
kubectl get pods --selector env=development
```

or

```
kubectl get pods -l env=development
```

The --all-namespaces flag can be used to list pods across all namespaces3. Therefore, the correct command to display all the pods in the cluster that are labeled as 'env: development' is:

```
kubectl get pods --all-namespaces --selector env=development
```

or

```
kubectl get pods --all-namespaces -l env=development
```

NEW QUESTION # 45

A users attempts to set the system time from inside a Docker container are unsuccessful. Could this be blocking this operation?

Solution: Linux capabilities

- [A. Yes](#)
- [B. No](#)

Answer: A

Explanation:

= Linux capabilities are a way of restricting the privileges of a process or a container. By default, Docker containers run with a reduced set of capabilities, which means they cannot perform certain operations that require higher privileges, such as setting the system time1. To allow a container to set the system time, you need to grant it the SYS_TIME capability by using the --cap-add option when running the container2. For example, `docker run --cap-add SYS_TIME alpine date -s 12:00` would set the system time to 12:00 inside the alpine container3. References: Docker Documentation, Runtime privilege and Linux capabilities, Change system date time in Docker containers without impacting host, Is it possible to change time dynamically in docker container?

NEW QUESTION # 46

Will this command mount the host's '/data1' directory to the ubuntu container in read-only mode?

Solution. '`docker run -v /data:/mydata -mode readonly ubuntu`'

- [A. No](#)
- [B. Yes](#)

Answer: A

Explanation:

Explanation

This command does not mount the host's /data directory to the ubuntu container in read-only mode. The -v or --volume flag mounts a host directory or a named volume to a container. The syntax for mounting a host directory is `-v <host-path>: <container-path>[.<options>]`. The options can be ro for read-only mode, rw for read-write mode, z or Z for SELinux labels, etc. In this command, -mode readonly is not a valid option and will cause an error. To mount the host's /data directory to the ubuntu container in read-only mode, you need to use `-v /data:/mydata:ro` instead. References: <https://docs.docker.com/storage/bind-mounts/>, <https://docs.docker.com/engine/reference/run/#volume-shared-filesystems>

NEW QUESTION # 47

.....

In the major environment, people are facing more job pressure. So they want to get DCA certification rise above the common herd. How to choose valid and efficient DCA guide torrent should be the key topic most candidates may concern. So now, it is right, you come to us. Our company is famous for its high-quality in this field especially for DCA Certification exams. After you practice our

study materials, you can master the examination point from the DCA exam torrent. Then, you will have enough confidence to pass your exam. We can succeed so long as we make efforts for one thing.
