If you use our products, you will just need to spend 20-30 hours to take your exam.

Fortinet NSE 6 - FortiEDR 7.0 Administrator Sample Questions (Q32-Q37):

NEW QUESTION # 32

An employee leaves the company and no longer has access to the FortiEDR system. You must ensure GDPR compliance regarding the employee's personal data stored in FortiEDR. Which two data types must be removed to meet GDPR requirements? (Choose two answers)

- A. Installed applications
- B. Installed OS name
- C. Device and user name
- D. IP address and MAC address

Answer: C,D

Explanation:

The correct answers are A. Device and user name and D. IP address and MAC address .

The FortiEDR 7.0.0 Administration Guide states that the GDPR feature is implemented in Administration > Settings > Personal Data Handling . It is used to remove relevant data for an employee or FortiEDR user who no longer has access to or uses the FortiEDR system. The guide explicitly identifies the personal data as device name, IP address, MAC address, and user name . It further states: "You must remove all device name, IP address, MAC address, and user name data from FortiEDR in order to fully comply with the GDPR standard." Therefore, installed applications and installed OS name are not the required GDPR personal data types in this FortiEDR procedure. The required removal is performed iteratively for the employee's/user's device name , IP address , MAC address , and user name . The guide also instructs administrators to continue removing the other required data: IP address, MAC address, and user name , and to delete any reports that may contain the user's data.

NEW QUESTION # 33

A company requires a global communication policy for a FortiEDR multi-tenant environment. Which recommendation must you make? (Choose one answer)

- A. Create a new communication control policy and assign it globally to all organizations.
- **B. Create a separate communication control policy for each organization.**
- C. Create a new communication control policy and delegate it to other organizations.
- D. Create a new communication control policy and apply it to multiple organizations.

Answer: B

NEW QUESTION # 34

You added three new applications to FortiEDR using only the Path attribute. What are two expected outcomes of this configuration? (Choose two answers)

- A. These applications will be blocked only if the file name also matches.
- **B. Only applications in the specified directory paths will be blocked.**
- C. All instances of these applications will be blocked, regardless of location.
- **D. These applications will be disabled until explicitly enabled.**

Answer: B,D

Explanation:

The correct answers are A and B .

The FortiEDR 7.0.0 Administration Guide states that newly added applications are disabled by default , which means they are not blocked unless enabled. The guide further explains that the default state can be changed by enabling the Enable Default application state option in the Application Control Manager settings. Therefore, option A is correct.

Option B is also correct because Application Control allows an application to be defined by Hash or by any combination of File Name / Path / Signer . The guide says that the Path field specifies the path to the executable file of the application to be blocked.

When using path-based matching, the enforcement is tied to the specified path criteria, not to every possible location of the same file. Option C is wrong because the file name does not also need to match when only the Path attribute is used.

Option D is wrong because blocking all instances regardless of location applies when only the File Name field is used, not when the match is path-specific. The guide explicitly states that if only the File Name field is filled, the application is blocked no matter where the executable appears.

NEW QUESTION # 35

What specific action does FortiEDR take when the Zero Trust Device Tagging playbook is activated? (Choose one answer)

- **A. It updates FortiClient EMS through an API and assigns a classification fabric tag.**
- B. It removes unmanaged endpoints from FortiClient EMS.
- C. It assigns a default tag to all endpoints.
- D. It disables the endpoint until a tag is assigned.

Answer: A

NEW QUESTION # 36

You are asked to configure a query to run every 15 minutes, automatically searching for specific registry modifications across all endpoints. Which FortiEDR feature must you configure? (Choose one answer)

- A. A scheduled query defined within a threat hunting profile
- B. A new playbook trigger based on the registry change event
- C. A communication control rule with a 15-minute delay
- D. A manual query linked to a policy override

Answer: A

Explanation:

The correct answer is C.

The FortiEDR guide explains that Threat Hunting searches across endpoint activity events, including registry activity. It states that Threat Hunting can search based on attributes of files, registry keys and values, network, processes, event log, and activity event types. This fits the requirement to search for specific registry modifications across endpoints.

The guide also explains that after filtering activity events, the query can be saved and defined as a Scheduled Query. It says:

"Scheduled Query: Mark this option to automate the process of detecting threats so that this query is run automatically according to the schedule that you define." It also states that a security event is automatically created in the Incidents tab when matches are detected, and notifications can be sent through email, Syslog, and other configured methods.

The guide further states that the Repeat Every/On options define the frequency and schedule when the query runs. Therefore, a 15-minute recurring query is handled through the Scheduled Query capability in Threat Hunting, not Communication Control, policy override, or a manual Playbook trigger.

Strictly speaking, the guide calls this a scheduled query under Threat Hunting saved queries, not a "communication control rule" or "manual query." Option C is the intended answer.

NEW QUESTION # 37

.....

The clients only need 20-30 hours to learn the NSE6_EDR_AD-7.0 exam questions and prepare for the test.
