## Fortinet FCP - FortiAnalyzer 7.4 Administrator Sample Questions (Q94-Q99):

### NEW QUESTION # 94

Which statement is true about the communication between FortiGate high availability (HA) clusters and FortiAnalyzer?

- A. You must add the device to the cluster first, and then registers the cluster with FortiAnalyzer.
- **B. Only the primary device in the cluster communicates with FortiAnalyzer.**
- C. FortiAnalyzer distinguishes each cluster member by its MAC address.
- D. Each cluster member sends its logs directly to FortiAnalyzer.

**Answer: B**

Explanation:

In a FortiGate high availability (HA) cluster, only the primary device sends its logs to the FortiAnalyzer.

This is to ensure that logs are not duplicated between the primary and secondary devices in the cluster.

The configuration of the FortiAnalyzer server on the FortiGate is such that the HA primary device is set as the server that forwards the logs.

Reference: FortiAnalyzer 7.4.1 Administration Guide, sections mentioning HA cluster configuration and log forwarding.

### NEW QUESTION # 95

What are offline logs on FortiAnalyzer?

- A. When you restart FortiAnalyzer, all stored logs are considered to be offline logs.
- B. Logs that are collected from offline devices after they boot up.
- C. Logs that are indexed and stored in the SQL database.
- **D. Compressed logs, which are also known as archive logs, are considered to be offline logs.**

**Answer: D**

Explanation:

Reference:

Logs are received and saved in a log file on the FortiAnalyzer disks. Eventually, when the log file reaches a configured size, or at a set schedule, it is rolled over by being renamed. These files (rolled or otherwise) are known as archive logs and are considered offline so they don't offer immediate analytic support. Combined, they count toward the archive quota and retention limits, and they are deleted based on the ADOM data policy. FortiAnalyzer\_7.0\_Study\_Guide-Online page 140

#### NEW QUESTION # 96

Which statement correctly describes RAID 10 (1+0) on FortiAnalyzer?

- A. A configuration with four disks, each with 2 TB of capacity, provides a total space of 4 TB.
- B. It combines mirroring striping and distributed parity to provide performance and fault tolerance
- C. It uses striping to provide performance and fault tolerance.
- D. A configuration with four disks, each with 2 TB of capacity, provides a total space of 2 TB.

**Answer: A**

Explanation:

RAID 10 combines mirroring (RAID 1) and striping (RAID 0). In a RAID 10 setup with four disks, data is mirrored across two pairs of disks, and those pairs are striped for performance. This results in improved performance and fault tolerance, but the total usable storage is 50% of the total raw storage, meaning four 2 TB disks provide 4 TB of usable space.

#### NEW QUESTION # 97

Which two purposes does the auto cache setting on reports serve? (Choose two.)

- A. It reduces report generation time.
- B. It automatically updates the hcache when new logs arrive.
- C. It provides diagnostics on report generation time.
- D. It reduces the log insert lag rate.

**Answer: A,B**
