The SolarWinds Observability-Self-Hosted-Fundamentals questions certificates are the most sought-after qualifications for those looking to further their careers in the business. To get the SolarWinds Observability-Self-Hosted-Fundamentals exam questions credential, candidates must pass the SolarWinds Observability-Self-Hosted-Fundamentals exam. But what should you do if you want to pass the SolarWinds SolarWinds Observability Self-Hosted Fundamentals exam questions the first time? Fortunately, FreeCram provides its users with the most recent and accurate SolarWinds Observability-Self-Hosted-Fundamentals Questions to assist them in preparing for their real Observability-Self-Hosted-Fundamentals exam. Our SolarWinds Observability-Self-Hosted-Fundamentals exam dumps and answers have been verified by SolarWinds certified professionals in the area.

SolarWinds Observability-Self-Hosted-Fundamentals practice test has real SolarWinds Observability Self-Hosted Fundamentals (Observability-Self-Hosted-Fundamentals) exam questions. You can change the difficulty of these questions, which will help you determine what areas appertain to more study before taking your SolarWinds Observability Self-Hosted Fundamentals (Observability-Self-Hosted-Fundamentals) exam dumps. Here we listed some of the most important benefits you can get from using our SolarWinds Observability-Self-Hosted-Fundamentals practice questions.

>> **Observability-Self-Hosted-Fundamentals Test Review** <<

Newest SolarWinds Observability-Self-Hosted-Fundamentals Test Review Offer You The Best Books PDF | SolarWinds Observability Self-Hosted Fundamentals

If you prepare for the Observability-Self-Hosted-Fundamentals exam using our FreeCram testing engine, it is easy and convenient to buy. Just two steps to complete your purchase, we will send the Observability-Self-Hosted-Fundamentals product to your mailbox quickly. And you only need to download e-mail attachments to get your products.

SolarWinds Observability-Self-Hosted-Fundamentals Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Reports: This domain focuses on creating, scheduling, and managing reports that provide insights into network performance, availability, and metrics for documentation and analysis.
Topic 2	<ul style="list-style-type: none">• Customization and User Experience: This domain addresses platform customization through dashboards and views, managing user accounts and permissions, implementing custom properties, and organizing resources using groups.
Topic 3	<ul style="list-style-type: none">• SolarWinds Platform Troubleshooting Tools: This domain covers troubleshooting tools including AppStack and PerfStack for correlating performance data, and Intelligent Mapping for visualizing network topology to identify and resolve issues.

SolarWinds Observability Self-Hosted Fundamentals Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which two of the following export formats are supported in Hybrid Cloud Observability (HCO) reports? (Choose two.)

- A. PDF
- B. excel
- C. txt
- D. JSON

Answer: A,B

Explanation:

SolarWinds Hybrid Cloud Observability provides robust reporting capabilities designed for both technical analysis and executive presentation. The SolarWinds Platform Reporting Guide specifies that reports generated through the Web Console can be delivered or manually exported in several standardized formats.

* Excel (.xls/.xlsx): This format is primarily used for data-heavy reports where administrators need to perform further calculations, sorting, or external data manipulation. It allows the raw table data from the report to be easily ingested into other business intelligence tools.

* PDF: This is the standard format for automated delivery and "executive-ready" documentation. It preserves the visual layout, including charts, logos, and specific formatting defined in the report builder.

While the platform uses JSON (Option B) for internal API communications and some dashboard configurations, and txt (Option D) might be used for certain log exports, they are not standard selectable

"export formats" within the primary Web-Based Report builder for end-user consumption. The primary focus of the reporting engine is providing human-readable (PDF) and spreadsheet-compatible (Excel) outputs.

NEW QUESTION # 23

Which two of the following statements apply to SolarWinds Hybrid Cloud Observability (HCO) Platform? (Choose two.)

- A. provides AIOps and machine learning technology
- B. can be deployed on-premises or in the cloud
- C. requires SolarWinds hybrid cloud observability
- D. can operate without an internet connection

Answer: B,D

Explanation:

The SolarWinds Hybrid Cloud Observability (HCO) Platform is designed for maximum deployment flexibility to accommodate diverse enterprise security and infrastructure requirements. According to the SolarWinds Platform Installation and Upgrade Guide, the platform's architecture is fundamentally self-contained.

* Operation without an internet connection (A): This is a critical requirement for many government, military, and high-security financial environments. The platform is capable of "air-gapped" operation, where all polling, data processing, and visualization occur within a private network. While features like

"Platform Connect" (for cloud-based AI) may require a connection, the core monitoring, alerting, and reporting functions remain fully operational without any external internet access.

* Deployment on-premises or in the cloud (B): HCO is truly hybrid. It can be installed on physical hardware or virtual machines within a local data center, or it can be deployed within a Virtual Private Cloud (VPC) on platforms like AWS or Azure. This allows organizations to maintain their monitoring infrastructure alongside their managed assets, regardless of where those assets reside. While HCO provides AIOps and machine learning (Option C), this is a feature of specific licensing tiers and configuration states rather than a fundamental "platform" characteristic that defines its deployment capability in the same way its offline and hybrid nature does.

NEW QUESTION # 24

What is a benefit of polling devices with SolarWinds' Hybrid Cloud Observability (HCO) agent?

- A. polling reduces database load
- B. data is written directly into the database
- C. communicates through singled fixed port data transmitted is encrypted

Answer: C

Explanation:

The SolarWinds Agent provides a robust alternative to agentless polling (SNMP/WMI), particularly in restricted environments. According to the SolarWinds Platform Agent requirements and port information, the primary architectural benefit is its communication security and firewall-friendly nature.

When using an agent, communication is consolidated. Instead of requiring a wide range of dynamic ports for RPC (as with WMI) or multiple ports for various SNMP checks, the agent communicates through a single fixed port (typically TCP 17778 for agent-initiated or 17790 for server-initiated communication).

Furthermore, all traffic between the agent and the polling engine is encrypted using 256-bit AES encryption.

This makes agents the ideal choice for monitoring:

* DMZ Servers: Where opening numerous ports back to the management network is a security violation.

* Cloud Instances (AWS/Azure): Where data must travel over public or semi-public links and requires encryption in transit.

* Remote Sites: Where NAT or strict firewall rules make traditional SNMP/WMI polling impossible.

Option B is incorrect because agents still report back to the Polling Engine (Orion Information Service), which then handles the database writes. Option C is incorrect as the agent actually increases the granularity of data collection, which may slightly increase database volume rather than reduce load.

NEW QUESTION # 25

Which two of the following formats can chart reports be exported into?

- A. pdf
- B. CSV
- C. .xls
- D. .xml

Answer: A,B

Explanation:

The export capabilities for chart-based reports are designed to provide both a visual representation and the underlying raw data. According to the SolarWinds Platform Administrator Guide, when viewing or scheduling a report that contains charts or graphs, the system supports two primary export formats:

* PDF: This format is the standard for visual reports. It captures the rendered chart exactly as it appears in the Web Console, making it ideal for email distribution to management or for archival purposes where the visual trend is more important than the individual data points.

* CSV (Comma Separated Values): When a chart is exported to CSV, the platform extracts the time-series data points used to

generate that chart. This allows technical staff to import the raw performance numbers into external tools like Excel for deeper statistical analysis that may not be possible within the standard web view.

While the broader reporting engine supports Excel (.xls) for tabular reports (as seen in Question 8), the specific function for exporting chart components often defaults to CSV for the data layer and PDF for the visual layer.

XML (Option D) is typically reserved for report definitions (transferring a report from one server to another) rather than exporting the data results of a chart.

NEW QUESTION # 26

What is the effect of checking the Encrypt connections with SSL box in the configuration wizard?

The screenshot shows a configuration wizard window for a SQL Server. The 'SQL Server' field contains 'mysqlserver'. There are two radio button options: 'Authenticate as currently logged in user' (unselected) and 'Switch user (Windows or SQL Server Authentication)' (selected). Below these are 'Login' and 'Password' fields, both containing 'sqladmin'. At the bottom, there is a checkbox labeled 'Encrypt connections with SSL' which is checked and highlighted with a red box. A link 'What type of authentication should I use?' is visible below the password field. Watermarks for 'freecram.com' and 'solarwinds' are present over the image.

- A. The network data between SolarWinds' Hybrid Cloud Observability Platform server and the SQL server will be encrypted.
- B. The login credentials will be encrypted between SolarWinds' Hybrid Cloud Observability Platform server and the SQL server while in transit.
- C. The login account to access the SQL server will be encrypted and stored in SolarWinds' Hybrid Cloud Observability Platform server.
- D. The installed SolarWinds product will use the login account to access the databases on the SQL server.

Answer: A

Explanation:

According to the SolarWinds Platform configuration documentation, the option to Encrypt connections with SSL during the database configuration wizard specifically dictates the security level of the communication channel between the application server and the database backend. When this box is checked, the platform ensures that the network data between SolarWinds' Hybrid Cloud Observability Platform server and the SQL server will be encrypted. This security measure is critical for protecting the integrity and confidentiality of the performance metrics, configuration data, and credentials as they traverse the internal network between these two primary architectural components.

This encryption utilizes Transport Layer Security (TLS) to wrap the TDS (Tabular Data Stream) protocol used by Microsoft SQL Server. By enabling this feature, the platform prevents potential "man-in-the-middle" attacks where an adversary could sniff network traffic to intercept sensitive monitoring data or administrative information stored within the SQL database. It is important to note that for this setting to function correctly, the SQL Server must be configured with a valid SSL/TLS certificate that is trusted by the SolarWinds application server.

This setting differs from simple credential encryption (Option C) or secure storage (Option B) because it applies to all data transmitted

during the session, not just the initial login exchange. Furthermore, while the configuration wizard does require a login account (Option A), that account's specific permissions are a separate functional requirement from the underlying encryption of the transport layer. Enabling SSL encryption is a standard best practice for organizations following strict compliance frameworks like HIPAA, PCI-DSS, or SOC2, where protecting data-in-transit is a mandatory requirement even on internal, "trusted" network segments. This centralized encryption toggle simplifies the deployment of high-security observability environments by orchestrating the secure connection parameters through the standard SolarWinds Configuration Wizard interface.

NEW QUESTION # 27

.....

SolarWinds certification Observability-Self-Hosted-Fundamentals exam is a rare examination opportunity to improve yourself and it is very valuable in the IT field. There are many IT professionals to participate in this exam. Passing SolarWinds certification Observability-Self-Hosted-Fundamentals exam can improve your IT skills. Our FreeCram provide you practice questions about SolarWinds Certification Observability-Self-Hosted-Fundamentals Exam. FreeCram's professional IT team will provide you with the latest training tools to help you realize their dreams earlier. FreeCram have the best quality and the latest SolarWinds certification Observability-Self-Hosted-Fundamentals exam training materials and they can help you pass the SolarWinds certification Observability-Self-Hosted-Fundamentals exam successfully.
