

F5CAB3 Valid Braindumps Questions & F5CAB3 Latest Exam Online

P.S. Free & New F5CAB3 dumps are available on Google Drive shared by Prep4pass: <https://drive.google.com/open?id=186H1irTJ-9HHQcSjIwUpXkqIdoW6a0Dg>

Attending Prep4pass, you will have best exam dumps for the certification of F5CAB3 exam tests. We offer you the most accurate F5CAB3 exam answers that will be your key to pass the certification exam in your first try. There are the best preparation materials for your F5CAB3 Practice Test in our website to guarantee your success in a short time. Please totally trust the accuracy of questions and answers.

F5 F5CAB3 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Apply procedural concepts required to modify and manage pools: This domain addresses managing server pools including health monitors, load balancing methods, priority groups, and service port configurations.
Topic 2	<ul style="list-style-type: none">Apply procedural concepts required to modify and manage virtual servers: This domain covers managing virtual servers including applying persistence, encryption, and protocol profiles, identifying iApp objects, reporting iRules, and showing pool configurations.

F5 F5CAB3 Latest Exam Online & Reliable F5CAB3 Exam Bootcamp

The BIG-IP Administration Data Plane Configuration F5CAB3 exam dumps are top-rated and real BIG-IP Administration Data Plane Configuration F5CAB3 practice questions that will enable you to pass the final BIG-IP Administration Data Plane Configuration F5CAB3 exam easily. With the BIG-IP Administration Data Plane Configuration Exam Questions you can make this task simple, quick, and instant. Using the BIG-IP Administration Data Plane Configuration F5CAB3 can help you success in your exam. Prep4pass offers reliable guide files and reliable exam guide materials for 365 days free updates.

F5 BIG-IP Administration Data Plane Configuration Sample Questions (Q44-Q49):

NEW QUESTION # 44

All pool members are online. All other virtual server settings are at default.
What might alter the load balancing behavior? (Choose one answer)

- A. Adding a OneConnect profile
- B. Enabling a fallback host in the HTTP profile

- C. Adding a persistence profile
- D. Enabling SNAT automap

Answer: C

Explanation:

By default, BIG-IP load balancing algorithms (such as Round Robin) distribute connections evenly across all available pool members. However, persistence profiles override normal load balancing decisions by forcing subsequent connections from a client to be sent to the same pool member.

According to the BIG-IP Administration: Data Plane Configuration documentation:

- * Persistence creates a client-to-server mapping that is honored before load balancing algorithms are applied.
- * When persistence is enabled, BIG-IP may repeatedly select the same pool member even if others are available.
- * This directly alters load balancing behavior.

Why the other options are incorrect:

- * A. Adding a OneConnect profile OneConnect optimizes server-side TCP connections but does not change which pool member is selected.
- * B. Enabling SNAT automap SNAT affects source address translation, not pool member selection.
- * C. Enabling a fallback host in the HTTP profile A fallback host is only used when no pool members are available.

Correct Resolution:

Adding a persistence profile alters load balancing behavior by maintaining client affinity to a specific pool member.

NEW QUESTION # 45

Which type of Virtual Server requires the use of a FastL4 profile?

- A. Standard
- B. Performance (HTTP)
- C. Performance (Layer 4)
- D. Stateless

Answer: C

NEW QUESTION # 46

Which type of Virtual Server requires the use of a FastL4 profile?

- A. Standard
- B. Performance (HTTP)
- C. Performance (Layer 4)
- D. Stateless

Answer: C

Explanation:

Performance (Layer 4) virtual servers rely on FastL4 profiles to provide high-speed L4 processing without full proxy overhead.

Below is BATCH 2 (next 10 questions) extracted only from your uploaded document that are clearly related to BIG-IP

Administration: Data Plane Configuration topics.

#As requested, I have strictly excluded questions related to:

- * Licensing
- * HA / Device Trust / Sync-only
- * Logging destinations
- * User roles
- * Hardware, EUD, support processes
- * System-only administration

NEW QUESTION # 47

Where in the configuration utility should the BIG-IP Administrator verify the pool member currently assigned to a pool is on port 80?

- A. Local Traffic > Pools: Pool List. Select the pool in question, select Members tab, view the configured Health Monitor.

- B. Local Traffic > Pools: Pool List. Select the pool in question, select the Members tab, view the configured Service Port.
- C. Local Traffic > Nodes: Node List. Select the node in question, view the Health Monitor next to Configuration.

Answer: B

Explanation:

The BIG-IP Configuration Utility (GUI) organizes information hierarchically to allow for granular management of application objects. A Pool is a collection of backend servers (pool members) that provide the same service. To verify the specific network parameters—such as the IP address and the service port—of the servers within a pool, the administrator must navigate to the specific pool's configuration.

The standard procedural path to verify this is Local Traffic > Pools: Pool List, where the administrator selects the specific pool name. Once inside the pool's configuration, the Members tab displays a list of all IP addresses and service ports associated with that pool. Under the "Service Port" column, the administrator can confirm if the member is listening on port 80 (HTTP).

Options A and B are incorrect for this specific verification task. While Nodes (Option A) show the health of a physical server, a node represents only an IP address and does not have a "Service Port" associated with it until it is defined as a pool member.

Verifying the Health Monitor (Option B) would tell the administrator how the system is checking the member's status, but it does not definitively show the port on which the member is actually receiving application traffic. In a BIG-IP environment, a pool member is uniquely identified by the combination of its Node IP and its Service Port, and the Members tab is the primary interface for managing and auditing these specific member attributes.

NEW QUESTION # 48

An organization reports slow performance accessing an Intranet website. All employees use a single proxy IP.

What should the BIG-IP Administrator do?

- A. Change Fallback Persistence to source_addr
- B. Change Load Balancing to Least Connections
- C. Change Source Address to proxy IP
- D. Change Default Persistence to cookie

Answer: D

Explanation:

When many users share one source IP, source-address persistence fails. Cookie persistence uniquely identifies clients at Layer 7.

NEW QUESTION # 49

.....

Through our investigation and analysis of the real problem over the years, our F5CAB3 prepare questions can accurately predict the annual F5CAB3 exams. In the actual exam process, users will encounter almost half of the problem is similar in our products. Even if the syllabus is changing every year, the F5CAB3 quiz guide's experts still have the ability to master propositional trends. Believe that such a high hit rate can better help users in the review process to build confidence, and finally help users through the qualification examination to obtain a certificate. All in all, we want you to have the courage to challenge yourself, and our F5CAB3 Exam Prep will do the best for the user's expectations.
