

# 100% Pass Salesforce - Professional Valid PDII-JPN Exam Voucher

BONUS!!! Download part of Lead2PassExam PDII-JPN dumps for free: <https://drive.google.com/open?id=1tcWWbgOTev1oZGoRH065LQXMECAGSXED>

Education degree does not equal strength, and it does not mean ability. Education degree just mean that you have this learning experience only. And the real ability is exercised in practice, it is not necessarily linked with the academic qualifications. Do not feel that you have no ability, and don't doubt yourself. When you choose to participate in the Salesforce PDII-JPN Exam, it is necessary to pass it. If you are concerned about the test, however, you can choose Lead2PassExam's Salesforce PDII-JPN exam training materials. No matter how low your qualifications, you can easily understand the content of the training materials. And you can pass the exam successfully.

For candidates who are going to buy PDII-JPN learning materials online, they may pay more attention to that money safety. We apply international recognition third party for the payment, and therefore your account and money safety can be guaranteed if you choose PDII-JPN exam materials from us. In addition, in order to build up your confidence for PDII-JPN Exam Dumps, we are pass guarantee and money back guarantee. If you fail to pass the exam in your first attempt, we will give you full refund and no other questions will be asked. You give us trust, and we help you pass the exam successfully.

## Realistic Salesforce Valid PDII-JPN Exam Voucher Pass Guaranteed

Under the tremendous stress of fast pace in modern life, sticking to learn for a PDII-JPN certificate becomes a necessity to prove yourself as a competitive man. Our PDII-JPN practice questions have been commonly known as the most helpful examination support materials and are available from global internet storefront. After years of unremitting efforts, our PDII-JPN Exam Materials and services have received recognition and praises by the vast number of customers. An increasing number of candidates choose our PDII-JPN study materials as their exam plan utility.

## Salesforce Sample Questions (Q21-Q26):

### NEW QUESTION # 21

以下の Aura コンポーネントを参照してください。

HTML

```
<aura:component>
<aura:attribute name="contactInfo" type="Object"/>
<aura:attribute name="showContactInfo" type="boolean" default="true"/>
<aura:handler name="init" value="{!this}" action="{!c.init}"/>
<aura:if isTrue="{!v.showContactInfo}">
<c:contactInfo value="{!v.contactInfo}"/>
</aura:if>
</aura:component>
```

開発者は、コンポーネントの読み込みが遅いという苦情を受けました。コンポーネントのパフォーマンスを向

上させるために、開発者はどのような変更を加えることができますか？

- A. `contactInfo` のタイプを「Map」に変更します。
- B. `showContactInfo` のデフォルトを "false" に変更します。
- C. `<c:contactInfo>` の内容をコンポーネントに移動します。

**Answer: B**

Explanation:

In Aura components, the `<aura:if>` tag is "lazy." It does not instantiate or render the components within its body until its `isTrue` expression evaluates to true. In the provided code, `showContactInfo` is defaulted to true.

This means that when the parent component begins its initialization, it immediately starts creating and rendering the child component `<c:contactInfo>` simultaneously.

By changing the default for `showContactInfo` to "false" (Option C), the developer implements a "Lazy Loading" pattern. The parent component will load quickly because it skips the heavy lifting required to render the child. The init handler then runs, retrieves the necessary data, and sets the boolean to true only when the data is ready. This improves the "perceived performance" and the Initial Page Load time.

Option A is incorrect because it increases the complexity and weight of the parent component, likely making it slower. Option B (changing to a Map) does not fundamentally affect the rendering engine's speed. Starting with the display attribute as false ensures the browser only renders what is absolutely necessary during the critical first few milliseconds of the page load.

## NEW QUESTION # 22

Universal Containers は、既存の Lightning Web コンポーネントへのサードパーティのマップ ウィジェットの追加を要求しました。

この要件を実装するために開発者が取るべき2つのアクションはどれですか？

2つの答えを選択してください

- A. コンテンツ配信ネットワークを使用し、コンポーネントに `<script></script>` タグを含めます。
- B. `Lightning platformResourceLoader` から `loadscript` をインポートします。
- C. サードパーティの JavaScript モジュールをコンポーネントに直接インポートします。
- D. サードパーティの JavaScript ライブラリを、コンポーネントにインポートする静的リソースとしてアップロードします。

**Answer: A,B**

## NEW QUESTION # 23

開発者は、取引先の登録に使用される Lightning Web コンポーネントからの入力に基づいて取引先を更新する Apex クラスを作成しました。アカウントの更新は、まだ登録されていない場合にのみ行う必要があります。

ユーザーが同時に更新を行った場合に、同じアカウントに対する互いの更新を上書きしないようにするには、開発者は何をすべきでしょうか？

- A.
- B.
- C.
- D.

**Answer: D**

Explanation:

When multiple users are updating the same record at the same time, there is a risk of overwriting each other's changes. Salesforce provides a mechanism called 'record locking' to prevent this from happening.

\* Option D is correct because including `FOR UPDATE` in the SOQL query locks the retrieved records for the duration of the transaction. This prevents other transactions from updating the record until the current transaction is complete, which is essential for avoiding race conditions where two users might overwrite each other's updates.

\* Option A is incorrect because while adding a try/catch block around the update operation is good practice for handling exceptions, it does not prevent overwrites from concurrent updates.

\* Option B is incorrect because using `upsert` instead of `update` does not address the problem of concurrent updates. The `upsert` operation is used to either insert a new record or update an existing one based on whether a record with a matching ID or external ID already exists.

\* Option C is incorrect because FOR UPDATE should be used in the SOQL query to lock the records, not in the SELECT statement itself.

#### NEW QUESTION # 24

<apex:commandButton> が実行されている場合と実行されていない場合に、開発者が異なるテキストを表示するには、どのタグを使用する必要がありますか？

- A. <ApexactionSupper>
- B. <ApexactionStatus>
- C. <apexactionPoller>
- D. <ApexpageMessages>

**Answer: B**

#### NEW QUESTION # 25

非同期 Apex を使用することでのみ実行できるユースケースはどれですか？

- A. 挿入完了後のレコードの更新1
- B. バッチプロセスを将来完了するようにスケジュールするための呼び出しを行う
- C. Apexトリガーから Web サービスを呼び出す
- D. 数万件のレコードをクエリする

**Answer: C**

Explanation:

Salesforce enforces a strict architectural boundary regarding database transactions and external communications. When an Apex trigger executes, it is part of a synchronous database transaction. If the platform allowed a synchronous callout (a web service call) directly from a trigger, the database transaction- including all active record locks-would have to remain open while waiting for the external system to respond. This could lead to severe performance degradation and hit the "Concurrent Request" limit. Consequently, calling a web service from an Apex trigger (Option C) must be handled asynchronously. A developer must hand off the callout logic to an @future(callout=true) method, a Queueable class, or a Platform Event. This allows the trigger to finish its work and commit the database transaction immediately, while the callout runs in its own separate background process with its own set of governor limits.

Option A is incorrect because a standard synchronous query can retrieve up to 50,000 records. Option B is incorrect because System.scheduleBatch is a synchronous call to initiate a process, even if the process itself runs later. Option D is incorrect because record updates can be handled synchronously in an after insert trigger context.

#### NEW QUESTION # 26

.....

It points to the exam heart to solve your difficulty. So high quality materials can help you to pass your exam effectively, make you feel easy, to achieve your goal. With the PDII-JPN test guide use feedback, it has 98%-100% pass rate. That's the truth from our customers. And it is easy to use for you only with 20 hours' to 30 hours' practice. After using the PDII-JPN Test Guide, you will have the almost 100% assurance to take part in an examination. With high quality materials and practices, you will get easier to pass the exam.
