

# 2V0-15.25 Exam Voucher - 2V0-15.25 New Exam Materials

## Complete 2V0-15.25 Exam Guide with Practice Tests

Prepare - <https://bit.ly/4csa0RE> - confidently for the 2V0-15.25 exam with this comprehensive practice test and study guide, designed to cover all key concepts of VMware Cloud Foundation 9.0 Support. Featuring realistic practice questions that mirror the actual exam format, it helps you identify knowledge gaps and strengthen your understanding with clear, detailed explanations. Whether you're beginning your preparation or refining your skills, this resource offers a structured approach to mastering exam topics, boosting your confidence, and increasing your chances of certification success.

Vmexam.com

After clients pay for our 2V0-15.25 exam torrent successfully, they will receive the mails sent by our system in 5-10 minutes. Then the client can click the links and download and then you can use our 2V0-15.25 questions torrent to learn. Because time is very important for the people who prepare for the exam, the client can download immediately after paying is the great advantage of our 2V0-15.25 Guide Torrent.

## VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.</li> </ul>

## VMware 2V0-15.25 New Exam Materials & 2V0-15.25 Reliable Real Test

As the famous saying goes, time is life. Time is so important to everyone because we have to use our limited time to do many things. Especially for candidates to take the 2V0-15.25 exam, time is very precious. They must grasp every minute and every second to prepare for it. From the point of view of all the candidates, our 2V0-15.25 training quiz give full consideration to this problem. And we can claim that if you study our 2V0-15.25 study materials for 20 to 30 hours, you can pass the exam for sure.

### VMware Cloud Foundation 9.0 Support Sample Questions (Q16-Q21):

#### NEW QUESTION # 16

An administrator has received reports of high CPU ready times on several Virtual Machines (VMs) running within a VMware Cloud Foundation (VCF) with error "Failed to scan VM image" and has been tasked with collecting detailed metrics for all running Virtual Machines from each ESX host. The error message is: com.vmware.esx.settings\_daemon.scan\_spec.

scan\_spec.

What is the cause of this error?

- A. A vendor add-on was not provided in the image.
- **B. A component was removed from the image.**
- C. The cluster was not assigned a default image.
- D. A device driver is incompatible with the included firmware.

**Answer: B**

Explanation:

The error message com.vmware.esx.settings\_daemon.scan\_spec (reconstructed from the typo settings\_daemon.scan\_spec) is a specific failure generated by the vSphere Lifecycle Manager (vLCM) compliance engine on the ESXi host.

\* Cause - Removed Component: This error is a documented known issue in vSphere 8.x/VCF 5.x+, specifically occurring when an administrator has removed a component from the Cluster Image that the system validates as "required" or "structural" for the host's hardware configuration (common with hosts using DPUs or specific OEM add-ons).

\* The Scenario: The mention of "High CPU ready times" likely implies the administrator attempted to streamline the host image by removing a perceived "bloatware" component (like a vendor monitoring agent or unused driver) to improve performance.

\* The Result: When vLCM attempts to build the "Scan Specification" (scan\_spec) to validate the host against this modified image, the internal struct validation fails because the removed component creates an invalid dependency state, throwing the Invalid field software\_spec... or scan\_spec exception.

#### NEW QUESTION # 17

An administrator is preparing to import a vSphere environment into VMware Cloud Foundation (VCF) as a workload domain. The vSphere environment has the following configuration:

- vSphere version 8.0 update 3.
- Three-node vSAN cluster with a single OSA datastore.
- Two vSphere Distributed Switches (VDS).
- Three vmkernel adapters with DHCP assigned IP addresses.

What change must the administrator make before importing this environment?

- A. Convert the vSAN datastore from OSA to ESA.

- B. Update the vmkernel adapters with statically assigned IPs.
- C. Upgrade vCenter and ESXi to vSphere 9.0.
- D. Consolidate to a single vSphere Distributed Switch.

**Answer: B**

Explanation:

When importing an existing vSphere environment into VMware Cloud Foundation (VCF) as a workload domain, several strict prerequisites must be met. One of the key requirements documented in VCF 9.0 is that all VMkernel adapters (vmk ports) used for vSAN, vMotion, management, or other system traffic must have statically assigned IP addresses. DHCP-assigned VMkernel IPs are not supported for VCF workload domain bring-up or import operations.

In the provided scenario, the environment includes:

- \* vSphere 8.0 U3
- \* A 3-node vSAN OSA cluster
- \* Two VDS switches
- \* VMkernel adapters using DHCP

Before VCF can successfully validate and import the environment, the administrator must convert these VMkernel interfaces to static IP addressing. VCF uses IPAM assumptions and deterministic host networking configurations; DHCP introduces variability incompatible with automated lifecycle operations.

Option A (consolidating VDS) is unnecessary-VCF supports multiple VDS configurations during import.

Option B (upgrading to vSphere 9.0) is not required for import.

Option D (convert OSA to ESA) is impossible pre-import and not required-VCF supports OSA clusters.

#### NEW QUESTION # 18

A user wishes to publish a VMware Cloud Foundation (VCF) Operations Orchestrator workflow to their VCF Automation project catalog, but is blocked from publishing any workflows.

The following information has been provided:

- \* In the VCF Automation Organization portal, the user cannot see the Workflows option under Content Hub.
- \* The organization is not a Provider Consumption Organization.

Which are the two likely causes of this issue? (Choose two.)

- A. An embedded VCF Operations Orchestrator is not integrated with their Organization.
- B. The user is logged in the Project Advanced User rights
- C. An external VCF Operations Orchestrator is not integrated with their Organization.
- D. The user is logged in with Project Administrator rights.
- E. The user is logged in with Project User rights.

**Answer: A,C**

Explanation:

In VMware Cloud Foundation 9.0, publishing a VCF Operations Orchestrator workflow to a VCF Automation project catalog requires that the Organization has a valid integration with VCF Operations Orchestrator. The question states that the user cannot see the Workflows option under Content Hub, and the organization is not a Provider Consumption Organization (PCO). According to the VCF 9.0 documentation, only organizations with VCF Operations Orchestrator integration are allowed to publish workflows into the catalog. Both embedded and external orchestrator integrations must be configured depending on the environment. If no orchestrator (embedded or external) is integrated with the organization, workflows cannot be listed or published. This aligns with the documented VCF Automation and VCF Operations Orchestrator design requirements, which specify that workflow publishing is only available when the orchestrator instance is properly registered.

Additionally, user role permission issues could prevent workflow visibility, but the key blockers described in the scenario are the missing workflow section and the organization type. Because the organization is not a PCO, advanced provider features-including workflow publishing-are disabled unless a proper orchestrator integration exists. Therefore, the two most likely causes are:

- \* A: An external VCF Operations Orchestrator is not integrated with their Organization.
- \* D: An embedded VCF Operations Orchestrator is not integrated with their Organization.

These two conditions directly match the documented behavior in VMware Cloud Foundation 9.0.

#### NEW QUESTION # 19

An administrator logs into the VMware NSX Manager UI and discovers a time sync issue that has been reported in the VMware Cloud Foundation (VCF) installer.

The administrator performs the following steps:

1. Validates that the NTP server IP addresses are present in the NTP configuration on the VCF Installer.
2. Validates that the DNS records are correctly set for the FQDN and IP address of the two NTP servers.
3. Validates that the NTP servers can be pinged by name and IP address from the VCF Installer.
4. Validates that the time between the NTP servers and the VCF Installer is synchronized successfully.

What additional step should the administrator perform to help identify the cause of the error?

- **A. Confirm that the time on the ESX hosts allocated for the management domain is synchronized with the same NTP servers as the VCF Installer.**
- B. Confirm that the NTP server details have been specified in the deployment parameter workbook using the required FQDN format.
- C. Confirm that the NTP service has an allowed rule in the iptables on the VCF Installer.
- D. Confirm that the ESX hosts have been configured to use host time synchronization.

**Answer: A**

Explanation:

During VMware Cloud Foundation bring-up, time synchronization across all management components is mandatory. The VCF Installer, ESXi hosts, NSX Manager nodes, and vCenter must all sync to the same NTP servers. If even one host or component has a time skew exceeding VMware's allowed limits, VCF will report time sync errors during bring-up or post-deployment. The administrator validated NTP configuration, DNS resolution, ping connectivity, and time sync only on the VCF Installer appliance, but did not verify the ESXi hosts' time synchronization. NSX Manager obtains its time reference from the underlying ESXi host during deployment, so if the ESXi hosts are not synchronized with the same NTP sources, NSX Manager will drift, triggering the exact error described.

Option B (iptables) does not apply—the VCF Installer does not block outbound NTP by default.

Option C refers to workbook formatting, which would fail earlier in deployment—not after NSX Manager is running.

Option A is incorrect because ESXi should never use "host time sync"; NTP must be used.

#### NEW QUESTION # 20

An administrator determined that the VMware NSX admin password expired on their VMware NSX Edge Transport nodes. The administrator manually resets the password in the console of each Edge Transport node.

What additional action is required to synchronize the new password in VMware Cloud Foundation (VCF) Operations?

- **A. In VCF Operations, remediate the admin password for each NSX Edge Transport node.**
- B. In VCF Operations, update the admin password for each NSX Edge Transport node.
- C. In VCF Operations, rotate the admin password for each NSX Edge Transport node.
- D. In VCF Operations, sync the admin password for each NSX Edge Transport node.

**Answer: A**

Explanation:

In VMware Cloud Foundation 9.0, password changes made manually on an NSX Edge Transport Node are not automatically synchronized with VCF Operations. VCF Operations maintains secure credential records for all managed components, including NSX Manager appliances and NSX Edge Transport Nodes. When credentials become stale—such as after a password expiration and manual reset—VCF Operations marks the credential object as out of sync and requires administrative remediation.

The official workflow described in VCF 9.0 Operations documentation states that administrators must use the "Remediate Password" function whenever a password was changed outside of VCF Operations, ensuring that the platform revalidates and updates the stored credentials used for monitoring, log collection, and automation tasks. Options such as "rotate," "sync," or "update" do not apply because rotation implies generating a new password managed by VCF, and "sync" does not overwrite the stored credential. Only remediation forces VCF Operations to re-validate and align credentials with the external system.

Therefore, after manually resetting the NSX Edge admin password, the administrator must perform password remediation in VCF Operations to restore operational consistency, making B the correct and verified answer.

#### NEW QUESTION # 21

.....

According to the statistics shown in the feedback chart, the general pass rate for latest 2V0-15.25 test prep is 98%, which is far beyond that of others in this field. In recent years, our 2V0-15.25 exam guide has been well received and have reached 99% pass rate with all our dedication. As one of the most authoritative question bank in the world, our study materials make assurance for your

passing the 2V0-15.25 Exam
