

Salesforce-Data-Cloud Formal Test 100% Pass | Reliable Salesforce-Data-Cloud: Salesforce Data Cloud Accredited Professional Exam 100% Pass

P.S. Free & New Salesforce-Data-Cloud dumps are available on Google Drive shared by BootcampPDF:
<https://drive.google.com/open?id=18hxV8ej4AiKDh9tsJih2zgwM7W1R7V9R>

As you can find on our website, we have three versions of our Salesforce-Data-Cloud learning questions: the PDF, Software and APP online. The online test engine and window software need to run on computers. The PDF version of the Salesforce-Data-Cloud training engine is easy to make notes. In short, all of the three packages are filled with useful knowledge. You can try our free trails before making final decisions since we also have demos of our Salesforce-Data-Cloud Exam Materials for you to free download before your payment.

No doubt the Salesforce Salesforce-Data-Cloud certification is a valuable credential that helps you to put your career on the right track and assist you to achieve your professional career goals. To achieve this goal you need to pass the Salesforce Data Cloud Accredited Professional Exam (Salesforce-Data-Cloud) exam. To pass the Salesforce Data Cloud Accredited Professional Exam (Salesforce-Data-Cloud) exam you need to start this journey with valid, updated, and real Salesforce Salesforce-Data-Cloud PDF QUESTIONS. The BootcampPDF Salesforce-Data-Cloud exam practice test questions are essential study material for quick Salesforce Salesforce-Data-Cloud exam preparation.

Salesforce-Data-Cloud Web-Based Practice Exam Questions

The experts in our company are always keeping a close eye on even the slightest change in the field. Therefore, we can assure that you will miss nothing needed for the Salesforce-Data-Cloud exam. What's more, the latest version of our Salesforce-Data-Cloud study materials will be a good way for you to broaden your horizons as well as improve your skills. So with our Salesforce-Data-Cloud Exam Questions, not only you can pass the exam with ease with 100% pass guarantee, but also you can learn the most professional and specialized knowledge in this field!

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q122-Q127):

NEW QUESTION # 122

A Data Cloud Consultant Is in the process of setting up data streams for a new service-based data source. When ingesting Case data, which field is recommended to be associated with the Event Time field?

- A. Escalation Date
- B. Last Modified Date
- C. Creation Date
- D. Resolution Date

Answer: C

Explanation:

The Event Time field is a special field type that captures the timestamp of an event in a data stream. It is used to track the chronological order of events and to enable time-based segmentation and activation. When ingesting Case data, the recommended field to be associated with the Event Time field is the Last Modified Date field. This field reflects the most recent update to the case and can be used to measure the case duration, resolution time, and customer satisfaction. The other fields, such as Resolution Date, Escalation Date, or Creation Date, are not as suitable for the Event Time field, as they may not capture the latest status of the case or may not be applicable for all cases. NEW QUESTION # 123

Which three options can be used to build a filter in the Segmentation Canvas?

- A. Streaming Insights
- B. Related Attributes
- C. Direct Attributes
- D. Data Lake Objects
- E. Calculated Insights

Answer: A,C,E

Explanation:

A window function is a unique requirement of a Streaming Insight query. It defines the time interval for the query to run on the streaming data and the frequency of the query execution. References:

NEW QUESTION # 124

How does an administrator increase the consolidation rate for Identity Resolution?

- A. Reduce the number of matching rules
- B. Change the Ignore Empty Value option
- C. Add more matching rules to broaden the search for matches
- D. Change all reconciliation rules to Source Sequence

Answer: A

Explanation:

Reducing the number of matching rules can increase the consolidation rate for Identity Resolution, because it reduces the chances of finding multiple matches for the same individual. Matching rules tell Data Cloud which profiles to unify during the identity resolution process. If there are too many matching rules, Data Cloud might find more than one match for a given profile, resulting in a lower consolidation rate.

NEW QUESTION # 125

A company wants to include certain personalized fields in an email by including related attributes during the activation in Data Cloud. It notices that some values, such as purchased product names, do not have consistent casing in Marketing Cloud Engagement. For example, purchased product names appear as follows: Jacket, jacket, shoes, SHOES. The company wants to normalize all names to proper case and replace any null values with a default value.

How should a consultant fulfill this requirement within Data Cloud?

- A. Create a streaming insight with a data action.
- B. Use formula fields when ingesting at the data stream level.
- C. Create one batch data transform per data stream.
- D. Create one batch data transform that creates a new DLO.

Answer: D

Explanation:

To normalize purchased product names (e.g., converting casing to proper case and replacing null values with a default value) within Salesforce Data Cloud, the best approach is to create a batch data transform that generates a new DLO. Here's the detailed explanation:

Understanding the Problem: The company wants to ensure that product names in Marketing Cloud Engagement are consistent and properly formatted. The inconsistencies in casing (e.g., "Jacket," "jacket," "shoes," "SHOES") and the presence of null values need to be addressed before activation.

Why Batch Data Transform?

A batch data transform allows you to process large volumes of data in bulk, making it ideal for cleaning and normalizing datasets. By creating a new DLO, you ensure that the original data remains intact while providing a clean, transformed dataset for downstream use cases like email personalization.

Steps to Implement This Solution :

Step 1: Navigate to the Data Streams section in Salesforce Data Cloud and identify the data stream containing the purchased product names.

Step 2: Create a new batch data transform by selecting the relevant data stream as the source.

Step 3: Use transformation functions to normalize the product names:

Apply the PROPER() function to convert all product names to proper case.

Use the COALESCE() function to replace null values with a default value (e.g., "Unknown Product").

Step 4: Configure the batch data transform to output the results into a new DLO . This ensures that the transformed data is stored separately from the original dataset.

Step 5: Activate the new DLO for use in Marketing Cloud Engagement. Ensure that the email templates pull product names from the transformed DLO instead of the original dataset.

Why Not Other Options?

A). Create a streaming insight with a data action: Streaming insights are designed for real-time processing and are not suitable for bulk transformations like normalizing casing or replacing null values.

B). Use formula fields when ingesting at the data stream level: Formula fields are useful for simple calculations but are limited in scope and cannot handle complex transformations like null value replacement.

Additionally, modifying the ingestion process may not be feasible if the data stream is already in use.

C). Create one batch data transform per data stream: This approach is inefficient and redundant. Instead of creating multiple transforms, a single batch transform can handle all the required changes and output a unified, clean dataset.

By creating a batch data transform that generates a new DLO, the company ensures that the product names are consistently formatted and ready for use in personalized emails, improving the overall customer experience.

NEW QUESTION # 126

A user needs permissions to access Data Cloud to create, manage, and publish segments. However, the user should not be allowed to create reports or manage data sources. Which permission set should an administrator assign?

- A. Customer Data Cloud for Marketing Admin
- B. Customer Data Cloud for Marketing Data Aware Specialist
- **C. Customer Data Cloud for Marketing Specialist**
- D. Customer Data Cloud for Marketing Manager

Answer: C

Explanation:

This permission set should be assigned to a user who needs permissions to access Data Cloud to create, manage, and publish segments, but not to create reports or manage data sources. This permission set allows the user to create and edit segments, calculated insights, streaming insights, and activations, but not to access data streams, data model, identity resolution, or reports.
