## Microsoft AZ-140 Valid Dump: Configuring and Operating Microsoft Azure Virtual Desktop - iPassleader Spend your Little Time and Energy to prepare

People who want to pass the exam have difficulty in choosing the suitable AZ-140 guide questions. They do not know which study materials are suitable for them, and they do not know which the study materials are best. Our company can promise that the AZ-140 study materials from our company are best among global market. As is known to us, the AZ-140 Certification guide from our company is the leading practice materials in this dynamic market. All study materials from our company are designed by a lot of experts and professors. In addition, these experts and professors from our company are responsible for constantly updating the AZ-140 guide questions.

## Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q166-Q171):

### NEW QUESTION # 166

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Windows Virtual Desktop host pool that contains five session hosts. The session hosts run Windows 10 Enterprise multi-session.

You need to prevent users from accessing the internet from Windows Virtual Desktop sessions. The session hosts must be allowed to access all the required Microsoft services.

Solution: You modify the IP configuration of each session host.

Does that meet the goal?

- A. Yes
- **B. No**

**Answer: B**

Implement a Windows Virtual Desktop Infrastructure

Testlet 2

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Contoso, Ltd. is a law firm that has a main office in Montreal and branch offices in Paris and Seattle. The Seattle branch office opened recently.

Contoso has an Azure subscription and uses Microsoft 365.

Existing Infrastructure. Active Directory

The network contains an on-premises Active Directory domain named contoso.com and an Azure Active Directory (Azure AD) tenant. One of the domain controllers runs as an Azure virtual machine and connects to a virtual network named VNET1. All internal name resolution is provided by DNS server that run on the domain controllers.

The on-premises Active Directory domain contains the organizational units (OUs) shown in the following table.

□ The on-premises Active Directory domain contains the users shown in the following table.

□ The Azure AD tenant contains the cloud-only users shown in the following table.

□ Existing Infrastructure. Network Infrastructure

All the Azure virtual networks are peered. The on-premises network connects to the virtual networks.

All servers run Windows Server 2019. All laptops and desktop computers run Windows 10 Enterprise.

Since users often work on confidential documents, all the users use their computer as a client for connecting to Remote Desktop Services (RDS).

In the West US Azure region, you have the storage accounts shown in the following table.

□ Existing Infrastructure. Remote Desktop Infrastructure

Contoso has a Remote Desktop infrastructure shown in the following table.

□ Requirements. Planned Changes

Contoso plans to implement the following changes:

\* Implement FSLogix profile containers for the Paris offices.

\* Deploy a Windows Virtual Desktop host pool named Pool4.

\* Migrate the RDS deployment in the Seattle office to Windows Virtual Desktop in the West US Azure region.

Requirements. Pool4 Configuration

Pool4 will have the following settings:

\* Host pool type: Pooled

- \* Max session limit: 7
- \* Load balancing algorithm: Depth-first
- \* Images: Windows 10 Enterprise multi-session
- \* Virtual machine size: Standard D2s v3
- \* Name prefix: Pool4
- \* Number of VMs: 5
- \* Virtual network: VNET4

Requirements. Technical Requirements

Contoso identifies the following technical requirements:

- \* Before migrating the RDS deployment in the Seattle office, obtain the recommended deployment configuration based on the current RDS utilization.
- \* For the Windows Virtual Desktop deployment in the Montreal office, disable audio output in the device redirection settings.
- \* For the Windows Virtual Desktop deployment in the Seattle office, store the FSLogix profile containers in Azure Storage.
- \* Enable Operator2 to modify the RDP Properties of the Windows Virtual Desktop deployment in the Montreal office.
- \* From a server named Server1, convert the user profile clicks to the FSLogix profile containers.
- \* Ensure that the Pool1 virtual machines only run during business hours.
- \* Use the principle of least privilege.

### NEW QUESTION # 167

You have an Azure Virtual Desktop deployment.

The session hosts are joined to an on-premises Active Directory domain named contoso.com.

You need to limit user sessions to three hours.

What should you configure?

- A. the properties of the workspace
- B. the RDP Properties of a host pool
- C. just-in-time (JIT) VM access
- D. a Group Policy Object (GPO) in contoso.com

**Answer: D**

Explanation:

Configure a Group Policy Object (GPO) and set the LimitSecondsToForceLogOffUser parameter to zero. This allows the session configuration setting in specified group policies to handle signing off user sessions.

### NEW QUESTION # 168

-

You have an Azure Virtual Desktop deployment.

You plan to create the host pools shown in the following table.

You need to recommend the virtual machine size for each host pool to meet the session host requirements.

**Answer:**

Explanation:

Explanation:

### NEW QUESTION # 169

-

You have two Azure subscriptions that are linked to an Azure Active Directory (Azure AD) tenant named contoso.com and contain an Azure Virtual Desktop deployment. The tenant contains a user named User1.

When User1 signs in to Azure Security Center, the user receives the message shown in the following exhibit.

You need to ensure that User1 can manage security information for the tenant. The solution must use the principle of least privilege.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
