EMEA-Advanced-Support Pass Leader Dumps | EMEA-Advanced-Support Updated Test Cram

If you choose our EMEA-Advanced-Support study torrent, you can make the most of your free time, without using up all your time preparing for your exam. We believe that using our EMEA-Advanced-Support exam prep will help customers make good use of their fragmentation time to study and improve their efficiency of learning. It will be easier for you to pass your exam and get your

certification in a short time. If you decide to use our EMEA-Advanced-Support Test Torrent, we are assured that we recognize the importance of protecting your privacy and safeguarding the confidentiality of the information you provide to us. We hope you will use our EMEA-Advanced-Support exam prep with a happy mood, and you don't need to worry about your information will be leaked out.

Fortinet EMEA Advanced Support Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

Which FortiGate feature allows inspection of encrypted SSL/TLS traffic?

- A. SSL Inspection
- B. Deep Packet Inspection
- C. Application Control
- D. Web Filtering

Answer: A

Explanation:

FortiGate's SSL Inspection feature decrypts and inspects SSL/TLS traffic to detect threats or enforce policies, using techniques like full SSL inspection or certificate inspection. Deep Packet Inspection (A) is a broader term, Application Control (C) identifies apps, and Web Filtering (D) blocks URLs, not specific to SSL. Exact extract: "SSL Inspection allows FortiGate to decrypt and inspect SSL/TLS traffic to detect hidden threats or enforce security policies, supporting full or certificate-based inspection."

NEW QUESTION # 29

In FortiGate, what is the purpose of the 'set webfilter-profile' command in a firewall policy?

- A. Applies a web filtering profile to block or allow URLs
- B. Enables deep packet inspection for web traffic
- C. Configures the web proxy settings
- D. Sets the web server authentication profile

Answer: A

Explanation:

The 'set webfilter-profile' command applies a web filtering profile to a firewall policy, enabling URL blocking or allowing based on categories or specific URLs. It does not enable DPI (B), configure proxies (C), or set authentication (D). Exact extract: "The 'set webfilter-profile' command applies a web filtering profile to a firewall policy, controlling access to websites based on URL categories or specific URLs."

NEW QUESTION # 30

A Company is running an outdated version of a Webserver software that is vulnerable to multiple code execution and injection attacks. Which Security feature can protect the Webserver until the security patches are applied?

- A. Intrusion Prevention System
- B. Intrusion Detection System
- C. Anti-virus Protection
- D. Anti rootkit Protection

Answer: A

Explanation:

An Intrusion Prevention System (IPS) actively blocks malicious traffic, such as code execution or injection attacks, by matching against known signatures or anomalies, protecting the webserver until patches are applied. Intrusion Detection System (IDS) only detects and alerts, not blocks. Anti-virus and anti-rootkit are less effective for web-based attacks. The original document's answer B is incorrect, as IDS does not prevent attacks. Exact extract: "IPS provides active protection by blocking malicious traffic based on signatures or anomaly detection... Unlike IDS, which only detects and alerts, IPS can drop packets to prevent attacks like code execution or SQL injection."

NEW QUESTION # 31

What is the default FortiGate behavior when a packet matches no firewall policy?

- A. The packet is forwarded to the default gateway
- B. The packet is dropped
- C. The packet is logged and allowed
- D. The packet is sent to the IPS engine

Answer: B

Explanation:

FortiGate operates on a default-deny principle; if a packet does not match any firewall policy, it is dropped to ensure security. No forwarding (A), IPS processing (C), or automatic allowing (D) occurs without a matching policy. Exact extract: "FortiGate uses a default-deny approach; packets that do not match any configured firewall policy are dropped to prevent unauthorized traffic."

NEW QUESTION # 32

Which parts of the IKE protocol below are responsible for authenticating the User (username/password) of a dialup IPsec tunnel?
(Check all correct answers)

- A. IKEv1 Xauth
- B. IKEv2 EAP
- C. IKEv2 SA_INIT
- D. IKEv1 phase2
- E. IKEv1 phase1

Answer: A,B

Explanation:

For user authentication in dialup IPsec, IKEv1 uses XAuth (Extended Authentication) after Phase 1 for username/password. IKEv2 uses EAP (Extensible Authentication Protocol) for similar user auth. Phase 1 and SA_INIT are for peer auth, Phase 2 for child SA negotiation. Exact extract: XAuth increases security by requiring remote dialup client users to authenticate in a separate exchange at the end of phase 1. IPsec IKEv2 VPNs now support certificate authentication and EAP authentication at the same time from a dialup FortiClient. With the eap-cert-auth setting ... IPsec IKEv2 VPNs now support certificate authentication and EAP authentication at the same time from a dialup FortiClient. IPsec IKEv1 uses XAUTH for user authentication, and IPsec IKEv2 uses EAP for user authentication. Only EAP-TTLS is interoperable with LDAP. For LDAP based user ... In your scenario, the user cannot authenticate by providing both a PSK and their credentials (using one of multiple EAP methods).

NEW QUESTION # 33
