## Juniper JN0-105 Exam Dumps - Reliable Way to Pass Exam Instantly

The JN0-105 pdf format of the PDFTorrent product is easy-to-use. It contains actual Junos, Associate (JNCIA-Junos) (JN0-105) exam questions. You can easily download and use Juniper JN0-105 pdf on laptops, tablets, and smartphones. PDFTorrent regularly updates JN0-105 Exam Questions' pdf version so that you always have the latest material. Furthermore, the Juniper JN0-105 pdf can be printed enabling paper study.

## Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.</li> </ul>

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q17-Q22):

### NEW QUESTION # 17

How many rescue configuration files are supported on a Junos device?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

Junos OS supports only 1 rescue configuration file on a device. This rescue configuration is a safeguard feature that allows network administrators to revert to a known good configuration in case of a configuration error or issue, ensuring network stability.

In Junos OS, each device supports only one rescue configuration file. The rescue configuration is a specific configuration that can be saved and later retrieved if needed. This is used as a fallback configuration that you know works and can be applied in case of an emergency or if the current configuration has issues.

Reference: Juniper Networks Documentation on Rescue Configuration

"You can create a rescue configuration file by using the request system configuration rescue save operational mode command. Each Junos OS device can have only one rescue configuration file."

### NEW QUESTION # 18

Which two statements are true about the candidate configuration? (Choose two.)

- **A. You can discard changes before committing them.**
- B. Candidate configuration changes are automatically applied.
- C. Multiple users cannot modify the same candidate configuration.
- **D. You can deploy multiple changes at the same time.**

**Answer: A,D**

Explanation:

The candidate configuration in Junos OS is a temporary configuration that allows network administrators to make and stage multiple configuration changes before applying them to the device. This approach enables the deployment of multiple changes in a single operation, ensuring that all configurations work together as intended before making them active. Additionally, the candidate configuration can be discarded if the administrator decides not to apply the staged changes, allowing for a "trial and error" approach without affecting the currently active configuration. This feature provides flexibility and reduces the risk of disruptive changes to the network.

### NEW QUESTION # 19

Which two statements are true about the PFE? (Choose two.)

- **A. The PFE implements various services such as policing, stateless firewall filtering, and class of service.**
- **B. The PFE uses Layer 2 and Layer 3 forwarding tables to forward traffic toward its destination.**
- C. The PFE handles all processes that control the chassis components.
- D. The PFE is responsible for performing protocol updates and system management.

**Answer: A,B**

Explanation:

The Packet Forwarding Engine (PFE) in Juniper Networks devices is the heart of the data plane, handling the actual forwarding of packets based on pre-computed forwarding tables. It provides several critical services to manage and control traffic flow, including policing (to enforce bandwidth limits for certain traffic types), stateless firewall filtering (to permit or deny traffic based on predefined criteria), and Class of Service (CoS) (to prioritize traffic to ensure quality of service for critical applications). The PFE utilizes both Layer 2 (MAC addresses) and Layer 3 (IP addresses) forwarding tables to make intelligent forwarding decisions, ensuring that packets are efficiently routed toward their final destination.

#### NEW QUESTION # 20

Which two statements about firewall filters are correct? (Choose two.)

- A. Firewall filters can match Layer 4 parameters.
- B. Firewall filters are stateful.
- C. Firewall filters can match Layer 7 parameters.
- D. Firewall filters are stateless.

**Answer: A,D**

Explanation:

Firewall filters in Junos OS are stateless, meaning they process each packet individually without regard to the state of a connection or sequence of packets. These filters can match various packet attributes, including those at Layer 4, such as TCP and UDP port numbers. This allows for granular control over traffic based on the type of service or application. Unlike stateless filters, stateful firewalls keep track of the state of active connections and make decisions based on the context of the traffic flow, which is not a capability of Junos firewall filters. Additionally, Junos firewall filters primarily operate up to Layer 4 and do not natively inspect Layer 7 parameters, which involve application-level data.

#### NEW QUESTION # 21

What does the user@router> clear log ospf-trace command accomplish?

- A. Logging data into ospf-trace is stopped.
- B. Data in the ospf-trace file is removed and logging continues.
- C. The ospf-trace file is deleted.
- D. Trace parameters are removed from the OSPF protocol configuration.

**Answer: B**

Explanation:

The clear log ospf-trace command on a Juniper Networks router is used specifically to manage the contents of the log file named ospf-trace. Executing this command clears or deletes the existing data within the ospf-trace log file but does not stop the logging process. The router continues to log new OSPF-related events and data into this file after the command is executed. This functionality is crucial for troubleshooting and monitoring the OSPF (Open Shortest Path First) protocol's operation by allowing network administrators to remove old or irrelevant log data while continuously capturing new events without interruption.

#### NEW QUESTION # 22
