New 200-901 Braindumps Pdf 100% Pass | Latest 200-901 Latest Study Questions: DevNet Associate Exam

Inlike other teaching platform, the DevNet Associate Exam study question is outlined the main content of the calendar year examination questions didn't show in front of the user in the form of a long time, but as far as possible with extremely concise prominent text of 200-901 test guide is accurate incisive expression of the proposition of this year's forecast trend, and through the simulation of topic design meticulously. With a minimum number of questions and answers of 200-901 Test Guide to the most important message, to make every user can easily efficient learning, not to increase their extra burden, finally to let the 200-901 exam questions help users quickly to pass the exam.

Cisco DevNet Associate Exam Sample Questions (Q228-Q233):

NEW QUESTION # 228

A development team is using a version control system that has a centralized workflow. Which feature of the version control system ensures the integrity of the central repository?

- A. built-in conflict resolution mechanism
- B. tracked code changes of the developers
- C. central common code versioning backup
- D. distributed nature of the version control system architecture

Answer: B

NEW QUESTION # 229

Drag and Drop Question

Refer to the exhibit. Drag and drop the code from the bottom onto the box where the code is missing to return the number of interfaces on a network device by using the Cisco DNA Center SDK. Not all options are used.

```
get_interface_info_by_id(device_id, headers=None, **request_parameters) [source]
```

Returns list of interfaces by specified device.

Parameters

- `device_id` (basestring) - Device ID.
- `headers` (dict) - Dictionary of HTTP Headers to send with the Request.
- `**request_parameters` - Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- `TypeError` - If the parameter types are incorrect.
- `MalformedRequest` - If the request body created is invalid.
- `ApiError` - If the DNA Center cloud returns an error.

```

from dnacentersdk import DNACenterAPI
base_url = 'https://10.9.11.226'

[ ] = 'da4606c3-63ad-4ed4-8f35-6bfec7c2df04'

dnac = [ ](username='cisco', password='secret',
          base_url=base_url, version='1.3.3', verify=False)

[ ] = [item['portName'] for item in
      dnac.[ ].get_interface_info_by_id(device_id)['response']]

# Check the number of ports on the device
print(f'The list of interfaces contains {len(port_list)} items.')

# Output
# The list of interfaces contains 54 items.

```

router_id

device_id

DNACenterAPI

DNAC

port_list

routers

devices

Answer:

Explanation:

```

from dnacentersdk import DNACenterAPI
base_url = 'https://10.9.11.226'

device_id = 'da4606c3-63ad-4ed4-8f35-6bfec7c2df04'

dnac = DNACenterAPI(username='cisco', password='secret',
                    base_url=base_url, version='1.3.3', verify=False)

port_list = [item['portName'] for item in
             dnac.devices.get_interface_info_by_id(device_id)['response']]

# Check the number of ports on the device
print(f'The list of interfaces contains {len(port_list)} items.')

# Output
# The list of interfaces contains 54 items.

```

router_id

DNAC

routers

NEW QUESTION # 230

Drag and Drop Question

Refer to the exhibit. A script must output details of all the Cisco Meraki MS220-BP switches across all organizations and networks. Drag and drop the code snippets from the bottom onto the boxes in the code to complete the script. Not all options are used.

SDK Documentation:

OrganizationController:

get_organizations()
get_network_device(dict)

DevicesController:

get_network_devices(id)

NetworksController:

get_organization_networks(dict)

```
from meraki_sdk.meraki_sdk_client import MerakiSdkClient
from meraki_sdk.exceptions.api_exception import APIException

api_key = "API_KEY"
client = MerakiSdkClient(api_key)

for org in [ ]:
    try:
        options = {"organization id": org["id"]}
        networks = [ ]
        for network in networks:
            devices = [ ]
            for device in devices:
                if device["model"] == "MS220-8P":
                    options = {"network id": network["id"], "serial": device["serial"]}
                    output = [ ]
                    print(output)
            except APIException as e:
                pass
```

```
client.organizations.get_organizations():
client.networks.get_organization_networks(api_key)
client.networks.get_organization_networks(options)
client.devices.get_network_devices(network ["id"])
client.devices.get_network_device(options=options)
client_devices.get_network_device(device ["model"])
```

Answer:

Explanation:

```

from meraki_sdk.meraki_sdk_client import MerakiSdkClient
from meraki_sdk.exceptions.api_exception import APIException

api_key = "API_KEY"
client = MerakiSdkClient(api_key)

for org in client.organizations.get_organizations():
    try:
        options = {"organization id": org["id"]}
        networks = client.networks.get_organization_networks(options)
        for network in networks:
            devices = client.devices.get_network_devices(network["id"])
            for device in devices:
                if device["model"] == "MS220-8P":
                    options = {"network id": network["id"], "serial": device["serial"]}
                    output = client.devices.get_network_device(options=options)
                    print(output)
            except APIException as e:
                pass

```

```
client.networks.get_organization_networks(api_key)
```

```
client_devices.get_network_device(device["model"])
```
