Actual Nutanix NCP-DB-6.10 Exam Dumps - Pass Exam With Good Scores

One of the main unique qualities of TestsDumps Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) PDF dumps and Web-based software without installation. Nutanix NCP-DB-6.10 PDF Questions work on all the devices like smartphones, Macs, tablets, Windows, etc. We know that it is hard to stay and study for the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam dumps in one place for a long time.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q239-Q244):

NEW QUESTION # 239
Before registering a database server VM to NDB, what should an administrator use to verify all required software and configuration dependencies?

- A. LCM
- B. NCC
- C. Upgrade Software
- D. Prerequisites script

Answer: D

Explanation:
Before registering a database server VM to NDB, an administrator must verify that all required software (e.g., database engine, OS dependencies) and configuration settings (e.g., WinRM for Windows, SSH for Linux) are in place. NDB provides a prerequisites script, which can be run on the target VM to check these dependencies automatically. This script ensures compatibility and readiness, reducing registration failures.

NEW QUESTION # 240
Era allows custom metadata to be assigned to entities (clones, time machines, databases, and database servers) by using which component?

- A. Index
- B. Text
- C. Notes
- D. Tags

Answer: D

Explanation:
Nutanix Era allows custom metadata to be assigned to entities (clones, time machines, databases, and database servers) by using Tags. Tags are a component of Nutanix Era that allows users to assign custom metadata to various entities, enhancing the ability to organize, search, and manage these entities within the Era platform.

NEW QUESTION # 241
An administrator needs to restore a source database from a point in time at 21:50, but the restore option is not available.
What could explain the matter?

- A. Point in time must be within the most recent range.
- B. Logs to Backup must be run first.
- C. Change to snapshot option.
- D. Selected Restore time is not available.

Answer: B

Explanation:
The provided exhibit shows the NDB Time Machine restore interface for October 31, 2024, with a Point-in-Time (PIT) restore option selected at 21:50. However, the restore option is unavailable, as indicated by the question. The exhibit includes a warning: "Logs to Backup: The database may contain additional logs. Backup any remaining logs before restore or they will be lost." This suggests that PIT restore requires continuous log retention, and if logs since the last snapshot (at 01:10:00) are not backed up, the restore to 21:50 cannot proceed. Running the "Logs to Backup" operation ensures all transaction

logs are captured, enabling PIT restore by allowing NDB to replay logs to the desired point.

NEW QUESTION # 242
In Nutanix Database Service (NDB), which component is primarily responsible for coordinating database lifecycle tasks such as deployment, cloning, and patching?

- A. Prism Central
- B. Calm Blueprint Engine
- C. NDB Controller VM
- D. NDB Agent

Answer: C

Explanation:
The NDB Controller VM is the core orchestration component that manages workflows for database lifecycle tasks. The Agent runs inside DB Server VMs to execute commands, while Prism Central provides general management but not database orchestration.

NEW QUESTION # 243
An administrator begins an SQL database clone deletion, but notices it fails almost immediately.
What could be the cause of this failure?

- A. The database data drives are shared with other applications.
- B. The database was not marked as Offline before the operation.
- C. The clone has been marked as Immutable.
- D. A refresh operation is in progress.

Answer: C

Explanation:
If an SQL database clone deletion fails immediately in NDB, the most likely cause is that the clone has been marked as Immutable. An immutable clone is protected from deletion to prevent accidental data loss, often set for critical development or testing environments. This protection must be explicitly removed by the administrator (e.g., via the NDB GUI or CLI) before the deletion can proceed.

NEW QUESTION # 244
......

When we choose to find a good job, there is important to get the NCP-DB-6.10 certification as you can. There is a fabulous product to prompt the efficiency--the NCP-DB-6.10 exam prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams. Our product is elaborately composed with major questions and answers. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the NCP-DB-6.10 Test Question. Then, you will have enough confidence to pass it.
