

FCP_FSA_AD-5.0 Actual Exams & FCP_FSA_AD-5.0 New Question

There are other countless advantages of the FCP - FortiSandbox 5.0 Administrator FCP_FSA_AD-5.0 exam that you can avail of after passing the FCP - FortiSandbox 5.0 Administrator exam. But keep in mind to pass the FCP - FortiSandbox 5.0 Administrator FCP_FSA_AD-5.0 exam is a difficult job. You have to put in some extra effort, time, and investment then you will be confident to perform well in the final FCP - FortiSandbox 5.0 Administrator exam. In this journey, you can get help from FCP - FortiSandbox 5.0 Administrator FCP_FSA_AD-5.0 Dumps that will assist you in FCP - FortiSandbox 5.0 Administrator exam preparation and prepare you to perform well in the final FCP - FortiSandbox 5.0 Administrator exam.

Fortinet FCP_FSA_AD-5.0 Exam Syllabus Topics:

Topic	Details
Topic 1	Scanning and rating components: This section focuses on FortiSandbox scanning mechanisms, including scanning components, managing guest virtual machines, and configuring scan options to properly analyze and rate suspicious files.
Topic 2	Integration: This domain explains how to integrate FortiSandbox within the Fortinet Security Fabric and with third-party tools, as well as identifying ATP deployments and resolving integration-related issues.
Topic 3	Results analysis: This section involves understanding common attack vectors, analyzing malware behavior, and interpreting scan job reports to assess threats and make informed security decisions.
Topic 4	Deployment and system settings: This domain covers understanding FortiSandbox deployment within different stages of the Cyber Kill Chain, along with configuring system settings, high availability (HA) clusters, and troubleshooting system-related issues.

Fortinet - Efficient FCP_FSA_AD-5.0 - FCP - FortiSandbox 5.0 Administrator Actual Exams

Our FCP_FSA_AD-5.0 learning guide boosts many advantages and it is your best choice to prepare for the test. Firstly, our FCP_FSA_AD-5.0 training prep is compiled by our first-rate expert team and linked closely with the real exam. So that if you practice with our FCP_FSA_AD-5.0 Exam Questions, then you will pass for sure. Secondly, our FCP_FSA_AD-5.0 study materials provide 3 versions and multiple functions to make the learners have no learning obstacles. They are the PDF, Software and APP online.

Fortinet FCP - FortiSandbox 5.0 Administrator Sample Questions (Q43-Q48):

NEW QUESTION # 43

To allow access to the FortiSandbox GUI the administrator must configure an IP address and a default gateway. Which two commands must the administrator use to accomplish this task? (Choose two answers)

- A. set default-gw <IP Address>
- B. set api-port port1
- C. set port1-ip <IP address>
- D. set admin-port port1

Answer: A,C

Explanation:

From the Deployment and System Settings lesson, the Study Guide explicitly states:

"Initial port1 IP configuration must be performed from the console, using the commands shown on this slide. If your management computer is on a separate subnet from FortiSandbox, you must specify a gateway address using the commands shown on this slide."

The two required commands are:

set port1-ip <IP address> - to assign the IP address to port1 for GUI access
set default-gw <IP Address> - to configure the default gateway so the management computer can reach FortiSandbox from a different subnet
Option B (set api-port port1) is for API access configuration, and Option C (set admin-port port1) is not a valid FortiSandbox CLI command for this purpose.

NEW QUESTION # 44

A FortiSandbox VM has been deployed and has been functioning correctly for several months. Suddenly, the system begins rejecting file submissions with an error message indicating a licensing problem. How can you determine, using the CLI, if the license is still valid? (Choose one answer)

- A. vm-status
- B. vm-license -l
- C. hc-setting -l
- D. status

Answer: D

Explanation:

From the Deployment and System Settings lesson, the Study Guide explicitly states:

"The status command shows information about the system, including firmware level, device serial number, disk usage, Windows VM status, states of the boot and data disks, and more. For VM appliances, it will also show the FortiSandbox license status." The key phrase is "For VM appliances, it will also show the FortiSandbox license status" - making the status command the correct choice for verifying license validity on a FortiSandbox VM deployment.

While vm-license -l shows installed Windows/Microsoft Office license keys, and vm-status shows guest VM image information, neither directly reports on the FortiSandbox appliance license validity. The status command is the definitive command for checking overall system and license status.

NEW QUESTION # 45

Refer to the exhibit.

Which two statements about the scanned file are true? (Choose two answers)

- A. The analysis resulted are defined.
- B. The URL was identified as a known malicious URL.
- C. The advanced AI feature identified the threat.
- D. The analysis resulted in a malicious verdict.

Answer: C,D

Explanation:

The exhibit summary says the file was "flagged by the PAIX engine" and describes it as "high-risk behavior." The lab guide also states for a similar file analysis scenario: "The PAIX engine detected potentially malicious activity... The overall assessment is that there is a high likelihood of malicious activity." In addition, the FortiGate integration lab explains that "FortiSandbox identified the fsa_dropper.exe file as high risk... because the advanced AI engine was able to detect malicious behaviour... at the static scan phase." These extracts confirm that the advanced AI / PAIX engine identified the threat, so A is true.

Option D is not supported. The study guide distinguishes high risk from malicious and explains that high risk is a suspicious threat-level rating, not the same as a malicious verdict. It states that FortiSandbox groups results into ratings such as high risk, medium risk, low risk, clean, and malicious, and defines high-risk separately as a serious suspicious rating. Since the exhibit explicitly refers to high-risk behavior, not a malicious verdict, D is false as written. The duplicated B/C options are also not proven by the exhibit text provided.

If your original source intended D to say "The analysis resulted in a high-risk verdict" instead of malicious verdict, then the correct pair would be A and D.

NEW QUESTION # 46

You must increase the scanning capacity of a FortiSandbox device by increasing the number of clones, but the FortiSandbox local clone limit is already at maximum. Which two actions can you take to expand the scanning capacity of the unit? (Choose two answers)

- A. Add VM licenses to FortiSandbox
- B. Reorganize the scan priority list
- C. Deploy remote WindowsCloudVM and MACOSX clones
- D. Add custom VMs

Answer: A,C

Explanation:

From the Scanning and Rating Components lesson, the Study Guide states:

"The universal VM license is a single license that grants you access to multiple VMs. Provides a scalable and cost-effective solution with up to 200 VMs on a single unit. Clone count limits shown on the VM Settings view apply to all enabled VM Types."

"When you enable Adaptive Scan, FortiSandbox dynamically adjusts the number of clones of any local VMs you have enabled."

Enabling this option does not affect the number of remote Mac OS or Windows cloud VMs." This confirms:

Option A - Deploying remote WindowsCloudVM and MACOSX clones expands capacity beyond local clone limits since remote VMs are not subject to local clone restrictions Option D - Adding VM licenses directly increases the number of available VMs up to 200 on a single unit Reorganizing the scan priority list (B) only affects scan order, not capacity. Adding custom VMs (C) would still be subject to the same local clone limits.

NEW QUESTION # 47

Refer to the CLI configuration below.

set device-authorization -a

How will FortiSandbox authorize new FortiClient devices after this command? (Choose one answer)

- A. When a new FortiClient registers, FortiSandbox will authorize it automatically.
- B. When a new device other than FortiClient registers, FortiSandbox will authorize it automatically.
- C. When a Fabric device is not authorized, FortiSandbox will authorize it automatically.
- D. When a new FortiClient registers, it inherits authorization status from the managing EMS or FortiGate.

Answer: A

Explanation:

The Study Guide explains the default behavior first: "You must authorize FortiClient EMS on FortiSandbox. FortiSandbox automatically authorizes all FortiClient endpoints managed by an authorized FortiClient EMS." It then adds the key point for this question: "To change the default FortiClient authorization behavior, use the command shown on this slide to authorize FortiClient endpoints using FortiSandbox CLI. By default, FortiClient inherits its authorization status from the managing EMS or FortiGate." Because the question specifically shows the CLI command set device-authorization -a, it is asking about the behavior after changing the default. The default inheritance model described in option A applies before the override. After this command, FortiSandbox is set to authorize FortiClient endpoints directly and automatically, which makes C the correct answer. Option B is incorrect because the command is specifically about FortiClient endpoints, not other devices in general. Option D is too broad and does not match the Study Guide's explanation, which is limited to FortiClient authorization behavior.

NEW QUESTION # 48

.....

If you choose our FCP_FSA_AD-5.0 exam review questions, you can share fast download. As we sell electronic files, there is no need to ship. After payment you can receive FCP_FSA_AD-5.0 exam review questions you purchase soon so that you can study before. If you are urgent to pass exam our exam materials will be suitable for you. Mostly you just need to remember the questions and answers of our Fortinet FCP_FSA_AD-5.0 Exam Review questions and you will clear exams. If you master all key knowledge points, you get a wonderful score.
