Questions NCP-MCA Pdf & NCP-MCA Reliable Exam Blueprint

Our Exam4PDF is a professional website to provide accurate exam material for a variety of IT certification exams. And Exam4PDF can help many IT professionals enhance their career goals. The strength of our the IT elite team will make you feel incredible. You can try to free download part of the exam questions and answers about Nutanix Certification NCP-MCA Exam to measure the reliability of our Exam4PDF.

Nutanix NCP-MCA (Certified Professional - Multicloud Automation) certification exam is designed for IT professionals who want to demonstrate their expertise in multicloud automation using the Nutanix platform. NCP-MCA exam is aimed at individuals who

have experience in managing and deploying cloud-based solutions, and want to take their skills to the next level. By passing the NCP-MCA Exam, candidates can demonstrate their ability to design, implement, and manage multicloud environments using Nutanix software.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q61-Q66):

NEW QUESTION # 61

What is the purpose of the Library in Self-Service?

- A. User-defined tasks (scripts) and variables
- B. User-defined tasks (scripts) and endpoints
- C. User-defined apps and blueprints
- D. User-defined apps and variables

Answer: A

Explanation:

The Library in Nutanix Self-Service (formerly Calm) serves as a central repository for reusable automation assets that can be shared across multiple Blueprints and Projects. According to the Self-Service Administration Guide, the Library specifically contains:

* Tasks (Scripts): The "Task Library" allows administrators to save Shell, PowerShell, Python (eScript), or HTTP tasks. These published tasks can then be imported into any blueprint, ensuring code reusability and standardization.

* Variable Types (Variables): The Library also hosts Variable Types (often simply referred to as user-defined variables in the context of the library). Administrators can create and save complex variable definitions (such as lists or static values) in the Library to be reused in different blueprints without redefining them every time.

Endpoints (Option C) are configured in the global Settings or Project settings, not within the Library tab.

Apps and Blueprints (Options A and D) have their own dedicated "Apps" and "Blueprints" tabs in the navigation bar.

NEW QUESTION # 62

A company has a business-critical VM. The VM Utilization of CPU and memory differs from time to time, but can never be allowed to run out of resources. The administrator also wants to make sure that the VM is not over provisioned when not needed.

The administrator determines these requirements that have been validated and automated in a test environment should also apply for the production environment:

VCPU needs to be added when CPU Utilization been over 80% for 15 minutes.

Memory needs to be increased by 4 GB when utilization reaches 80%.

Return of over-allocated resources must not affect other business applications.

What can the administrator do with the least amount of effort to make sure the VM is always performant and returns resources when not required?

- A. Clone and adjust the system-created playbooks
- B. Create a task based on requirements
- C. Create a blueprint based on requirements
- D. Import the playbook and adjust the values

Answer: B

NEW QUESTION # 63

Which Calm feature provides the ability for administrators to approve Single or Multi-VM Blueprints for assignment to Projects?

- A. Projects
- B. Application Manager
- C. Marketplace Manager
- D. Marketplace

Answer: C

Explanation:

The alert in Prism Central indicates that Calm showback is not able to reach the beam service. This could be due to network

connectivity issues or incorrect configurations. The administrator should check the DNS configuration in Prism Central (Option A) to ensure that it is correctly configured to allow communication with the Beam service. Additionally, checking if Prism Element is configured with Proxy settings (Option C) is essential as it can also affect the communication between Calm and Beam. Pulse (Option B) and Flow (Option D) are not related to the Calm showback feature and do not impact its functionality.

NEW QUESTION # 64

A customer is trying to deploy an application with Calm and receives this error for a Linux VM:

```
script execution has failed with error dial tcp: lookup
dummy on <dns_ip_in_pc>:53: server misbehaving
```

What is the cause of this error within the blueprint?

- A. Connection Type has a protocol selected.
- **B. Connection section has no network adapters selected for the Address box in Connection section.**
- C. Connection section has a network adapter selected for the Address box in Connection section.
- D. Connection Type has no protocol selected.

Answer: B

Explanation:

In the context of deploying an application with Calm, if a customer receives an error for a Linux VM, it could be due to the absence of network adapters selected for the Address box in the Connection section within the blueprint. This means that there is no specified network connection for the VM, leading to a failure in script execution. References: I found some references from Nutanix Multicloud Automation (NCP-MCA) Learning documents or resources that might be helpful for you:

* Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide: This is the official exam blueprint guide that covers the objectives, topics, and skills required for the

* certification. It also provides some sample questions and answers. The question you asked is similar to the one in section 3.1.1.

* Nutanix Multicloud Automation Administration (NMCAA): This is a training course that teaches you the skills needed to install, configure, operate, and manage Nutanix X-Play and Nutanix Calm. It includes topics such as blueprint creation, connection configuration, and script execution.

* Nutanix Calm User Guide: This is a user guide that explains how to use Nutanix Calm to automate the deployment and management of applications across different environments. It includes topics such as connection settings, blueprint validation, and error handling.

NEW QUESTION # 65

An administrator is tasked with setting up a Policy Engine for a Calm VM.

What information does the administrator require to complete this task?

- A. Every Prism Central Virtual IP address to be managed by the policy engine for Calm.
- **B. Networking information for all devices to be managed by the policy engine for Calm.**
- C. Public key of the Calm VM. For the Scale-Out Calm VIVI, provide the public key of all VMs,
- D. Private Key of the Calm VXL For the Scale-Out Calm VMU provide the private key of all VMs.

Answer: B

Explanation:

The policy engine is a single VM setup for the single or scale-out Prism Central. When you enable the policy engine for your Calm instance, a new VM is created and deployed for the policy engine. All you need is an available IP address that belongs to the same network as that of your Prism Central VM for the policy engine VM. You do not need to provide any public or private keys, or any Prism Central virtual IP addresses for this task. References: Nutanix Support & Insights, Calm on ESXi Deployment | Nutanix Community
