

SPLK-2002시험자료 & SPLK-2002시험대비최신덤프자료

참고: Pass4Test에서 Google Drive로 공유하는 무료 2026 Splunk SPLK-2002 시험 문제집이 있습니다:
<https://drive.google.com/open?id=1aBa3UIKC-TPBMkiyZetQxwJ31quPCXI>

Splunk SPLK-2002 덤프에 대한 자신감이 어디서 시작된것이나고 물으신다면 Splunk SPLK-2002덤프를 구매하여 시험을 패스한 분들의 회소식에서 온다고 답해드리고 싶습니다. 저희 Splunk SPLK-2002덤프는 자주 업데이트되고 오래된 문제는 바로 삭제해버리고 최신 문제들을 추가하여 고객님의 가장 정확한 덤프를 제공드릴수 있도록 하고 있습니다.

Splunk SPLK-2002 시험은 Splunk Enterprise Certified Architects가 되고자하는 개인을위한 가장 중요한 인증 시험 중 하나입니다. 이 시험은 복잡한 Splunk Enterprise 환경을 배치, 설계 및 관리 할 때 IT 전문가의 실용적인 기술과 지식을 테스트하도록 설계되었습니다. Splunk는 조직이 다른 소스에서 기계로 생성된 빅 데이터를 실시간으로 검색, 모니터링 및 분석 할 수 있는 운영 인텔리전스를위한 주요 플랫폼입니다. 따라서 SPLK-2002 인증 시험은 Splunk Enterprise Architecture 및 Administration에 대한 전문 지식을 보여 주려는 IT 전문가에게 필수 자격 증명입니다.

시험대비 SPLK-2002시험자료 덤프공부문제

자신을 부단히 업그레이드하려면 많은 노력이 필요합니다. IT업종 종사자라면 국제승인 IT인증자격증을 취득하는 것이 자신을 업그레이드하는 것과 같습니다. Splunk인증 SPLK-2002시험을 패스하여 원하는 자격증을 취득하려면 Pass4Test의 Splunk인증 SPLK-2002덤프를 추천해드립니다. 하루빨리 덤프를 공부하여 자격증 부자가 되세요.

최신 Splunk Enterprise Certified Architect SPLK-2002 무료샘플문제 (Q82-Q87):

질문 # 82

Which of the following clarification steps should be taken if apps are not appearing on a deployment client?
(Select all that apply.)

- A. Check deploymentclient.conf of the deployment client.
- B. Search for relevant events in splunkd.log of the deployment server.
- C. Check the content of SPLUNK_HOME/etc/apps of the deployment server.
- D. Check serverclass.conf of the deployment server.

정답: A,B,D

설명:

The following clarification steps should be taken if apps are not appearing on a deployment client:

- * Check serverclass.conf of the deployment server. This file defines the server classes and the apps and configurations that they should receive from the deployment server. Make sure that the deployment client belongs to the correct server class and that the server class has the desired apps and configurations.
- * Check deploymentclient.conf of the deployment client. This file specifies the deployment server that the deployment client contacts and the client name that it uses. Make sure that the deployment client is pointing to the correct deployment server and that the client name matches the server class criteria.
- * Search for relevant events in splunkd.log of the deployment server. This file contains information about the deployment server activities, such as sending apps and configurations to the deployment clients, detecting client check-ins, and logging any errors or warnings. Look for any events that indicate a problem with the deployment server or the deployment client.
- * Checking the content of SPLUNK_HOME/etc/apps of the deployment server is not a necessary clarification step, as this directory does not contain the apps and configurations that are distributed to the deployment clients. The apps and configurations for the deployment server are stored in SPLUNK_HOME/etc/deployment-apps. For more information, see Configure deployment server and clients in the Splunk documentation.

질문 # 83

When preparing to ingest a new data source, which of the following is optional in the data source assessment?

- A. Data volume
- B. Data format
- C. Data retention
- D. Data location

정답: C

설명:

Data retention is optional in the data source assessment because it is not directly related to the ingestion process. Data retention is determined by the index configuration and the storage capacity of the Splunk platform. Data format, data location, and data volume are all essential information for planning how to collect, parse, and index the data source.

질문 # 84

Which of the following configuration attributes must be set in server.conf on the cluster manager in a single-site indexer cluster?

- A. site_replication_factor
- B. master_uri
- C. site
- D. replication_factor

정답: B

설명:

The correct configuration attribute to set in server.conf on the cluster manager in a single-site indexer cluster is master_uri. This attribute specifies the URI of the cluster manager, which is required for the peer nodes and search heads to communicate with it. The other attributes are not required for a single-site indexer cluster, but they are used for a multisite indexer cluster. The site attribute defines the site name for each node in a multisite indexer cluster. The replication_factor attribute defines the number of copies of each bucket to maintain across the entire multisite indexer cluster. The site_replication_factor attribute defines the number of copies of each bucket to maintain across each site in a multisite indexer cluster. Therefore, option A is the correct answer, and options B, C, and D are incorrect.

1: Configure the cluster manager 2: Configure the site attribute 3: Configure the replication factor 4: Configure the site replication factor

질문 # 85

When configuring a Splunk indexer cluster, what are the default values for replication and search factor?

- A. replication_factor = 2search_factor = 2
- B. replication_factor = 3search_factor = 2
- C. replication_factor = 2search_factor = 3
- D. replication_factor = 3search_factor = 3

정답: B

설명:

The replication factor and the search factor are two important settings for a Splunk indexer cluster. The replication factor determines how many copies of each bucket are maintained across the set of peer nodes.

The search factor determines how many searchable copies of each bucket are maintained. The default values for both settings are 3, which means that each bucket has three copies, and at least one of them is searchable

질문 # 86

What is the logical first step when starting a deployment plan?

- A. Inventory the currently deployed logging infrastructure.
- B. Determine what apps and use cases will be implemented.
- C. Collect the initial requirements for the deployment from all stakeholders.
- D. Gather statistics on the expected adoption of Splunk for sizing.

정답: C

설명:

The logical first step when starting a deployment plan is to collect the initial requirements for the deployment from all stakeholders. This includes identifying the business objectives, the data sources, the use cases, the security and compliance needs, the scalability and availability expectations, and the budget and timeline constraints. Collecting the initial requirements helps to define the scope and the goals of the deployment, and to align the expectations of all the parties involved.

Inventorying the currently deployed logging infrastructure, determining what apps and use cases will be implemented, and gathering statistics on the expected adoption of Splunk for sizing are all important steps in the deployment planning process, but they are not the logical first step. These steps can be done after collecting the initial requirements, as they depend on the information gathered from the stakeholders.
