Our Salesforce Development-Lifecycle-and-Deployment-Architect Practice Materials are compiled by first-rank experts and Development-Lifecycle-and-Deployment-Architect Study Guide offer whole package of considerate services and accessible content. Furthermore, Salesforce Certified Development Lifecycle and Deployment Architect Development-Lifecycle-and-Deployment-Architect Actual Test improves our efficiency in different aspects. Having a good command of professional knowledge will do a great help to your life.

Salesforce Development-Lifecycle-and-Deployment-Architect certification exam consists of multiple-choice questions and scenarios that assess the candidate's ability to design and implement solutions using best practices and industry standards. Development-Lifecycle-and-Deployment-Architect exam covers a wide range of topics, including project and release management, source control, continuous integration and deployment, testing and quality assurance, and performance optimization.

Salesforce Development-Lifecycle-and-Deployment-Architect certification exam is one of the most in-demand certifications in the Salesforce ecosystem. Salesforce Certified Development Lifecycle and Deployment Architect certification exam is suitable for professionals who want to advance their career in Salesforce development and deployment. With this certification, candidates can demonstrate their expertise in designing, developing, and deploying Salesforce applications and solutions according to industry standards and best practices.

Achieving Salesforce Development-Lifecycle-and-Deployment-Architect Certification demonstrates a deep understanding of the Salesforce development lifecycle and deployment architecture, and the ability to design and deploy secure, scalable, and high-performance solutions on the platform. It is a valuable credential for professionals who want to advance their careers in Salesforce development and architecture and can help them stand out in a competitive job market.

## Development-Lifecycle-and-Deployment-Architect Test Dumps, Reliable Development-Lifecycle-and-Deployment-Architect Exam Vce

Are you still worried about not passing the Development-Lifecycle-and-Deployment-Architect exam? Do you want to give up because of difficulties and pressure when reviewing? You may have experienced a lot of difficulties in preparing for the exam, but fortunately, you saw this message today because our well-developed Development-Lifecycle-and-Deployment-Architect Study Materials will help you tide over all the difficulties. As a multinational company, our Development-Lifecycle-and-Deployment-Architect study materials serve candidates from all over the world. No matter which country you are currently in, you can be helped by our Development-Lifecycle-and-Deployment-Architect study materials.

## Salesforce Certified Development Lifecycle and Deployment Architect

## Sample Questions (Q192-Q197):

### NEW QUESTION # 192

Which two ways should a developer working on a data loading integration that operates between different Salesforce environments insert multiple related records in one call or transaction?

Choose 2 answers

- A. Streaming API
- B. Bulk API 2.0
- C. REST API Composite Request
- D. REST API SOBJect Tree Request

**Answer: C,D**

Explanation:

REST API SOBJect Tree Request and REST API Composite Request are two ways to insert multiple related records in one call or transaction. REST API SOBJect Tree Request allows you to create nested records that share a root record. REST API Composite Request allows you to execute a series of REST API requests in a single call. Bulk API 2.0 and Streaming API are not suitable for inserting multiple related records in one call or transaction. Bulk API 2.0 is used for loading large batches of data asynchronously, and Streaming API is used for receiving notifications of data changes in real time.

### NEW QUESTION # 193

Which two actions will contribute to an improvement of code security?

Choose 2 answers

- A. Integrate a static code security analysis tool in the CI/CD process.
- B. Implement a pull request and secure code review.
- C. Hire a company specialized in secure code review the current code.
- D. Use two developers to review and fix current code vulnerabilities.

**Answer: A,B**

Explanation:

Explanation

Implementing a pull request and secure code review will contribute to an improvement of code security by ensuring that the code is checked and approved by another developer before merging to the main branch.

Integrating a static code security analysis tool in the CI/CD process will contribute to an improvement of code security by automatically scanning the code for vulnerabilities and enforcing security standards. Hiring a company specialized in secure code review or using two developers to review and fix current code vulnerabilities are not actions that will improve code security, but rather remediate existing security issues.

### NEW QUESTION # 194

A developer was trying to retrieve the metadata from an org and ran the `sfdx force:source:retrieve` command. When the command was run, the developer received the error message: "This command is required to run from within an SFDX project" What can be two possible reasons that caused this problem? Choose 2 answers

- A. The developer created the project within VSCode, but ran the command in a separate terminal.
- B. The developer forgot to add the `-n` option with a project name as a command line argument.
- C. The developer hadn't run the `sfdx force:project:create` command.
- D. The developer created the project, but ran the command outside of the project directory.

**Answer: C,D**

### NEW QUESTION # 195

Which two options should be considered when making production changes in a highly regulated and audited environment?

Choose 2 answers

- A. Any production change should have explicit stakeholder approval.
- B. All changes including hotfixes should be reviewed against security principles.
- C. After deployment, the development team should test and verify functionality in production.
- D. No manual steps should be carried out.

**Answer: A,B**

Explanation:

Explanation

Two options that should be considered when making production changes in a highly regulated and audited environment are: all changes including hotfixes should be reviewed against security principles, and any production change should have explicit stakeholder approval. These options can help ensure that the changes are compliant with the regulations and have the necessary authorization and documentation. No manual steps should be carried out is not a valid option, as some changes may require manual steps, such as data migration or post-deployment verification. After deployment, the development team should test and verify functionality in production is also not a valid option, as testing and verification should be done in a lower environment before deploying to production, and the responsibility of testing and verifying functionality in production should be assigned to a different team than the development team. See Application Lifecycle and Deployment for more details.

#### NEW QUESTION # 196

Universal Containers (UC) is planning for a huge data migration from a home grown on-premise system to Salesforce as part of their Service Cloud Implementation. UC has approximately 5 million customers, 10 million contacts, and 30 million active cases. Which are the three key areas that should be tested as part of Data Migration? Choose 3 answers

- A. Data transformation against the source system.
- B. Case assignment rules and escalation rules.
- C. Page Layout assignment to the profiles
- D. Case Ownership along with associated entitlement and milestones.
- E. Case association with correct contact and Account.

**Answer: A,D,E**

#### NEW QUESTION # 197

.....

Our Development-Lifecycle-and-Deployment-Architect test torrent is of high quality, mainly reflected in the pass rate. As for our Development-Lifecycle-and-Deployment-Architect study tool, we guarantee our learning materials have a higher passing rate than that of other agency. Our Development-Lifecycle-and-Deployment-Architect test torrent is carefully compiled by industry experts based on the examination questions and industry trends in the past few years. More importantly, we will promptly update our Development-Lifecycle-and-Deployment-Architect exam materials based on the changes of the times and then send it to you timely. 99% of people who use our learning materials have passed the exam and successfully passed their certificates, which undoubtedly show that the passing rate of our Development-Lifecycle-and-Deployment-Architect Test Torrent is 99%. If you fail the exam, we promise to give you a full refund in the shortest possible time. So our product is a good choice for you. Choosing our Development-Lifecycle-and-Deployment-Architect study tool can help you learn better. You will gain a lot and lay a solid foundation for success.
