

Salesforce Data-Architect Exam Success Tips For Passing Your Exam on the First Try

What's more, part of that Real4test Data-Architect dumps now are free: <https://drive.google.com/open?id=1kzmW3prCstPeGwDFTTbBVzL8skHrFIWM>

The Real4test Data-Architect PDF dumps file is a collection of real, valid, and updated Data-Architect practice questions that are also easy to install and use. The Real4test Data-Architect PDF dumps file can be installed on a desktop computer, laptop, and even on your smartphone devices. Just download Real4test Salesforce Certified Data Architect (Data-Architect) PDF questions on your desired device and start Data-Architect exam dumps preparation today.

All contents are masterpieces from experts who imparted essence of the exam into our Data-Architect practice materials. So our high quality and high efficiency Data-Architect practice materials conciliate wide acceptance around the world. By incubating all useful content Data-Architect practice materials get passing rate from former exam candidates of 98 which evince our accuracy rate and proficiency. If your problems are divulging during the review you can pick out the difficult one and focus on those parts.

Ace Salesforce Data-Architect Exam Instantly with This Tried-and-Tested Method

In order to help you get Data-Architect certification, many experts have worked hard for several years to formulate Data-Architect exam torrent for all examiners. In such a way, our Data-Architect study materials not only target but also cover all knowledge points. Our Data-Architect practice materials also have a statistical analysis function to help you find out the deficiency in the learning process of Data-Architect practice materials, so that you can strengthen the training for weak links. In this way, you can more confident for your success since you have improved your ability.

Salesforce Certified Data Architect certification exam is one of the most prestigious certifications in the Salesforce ecosystem. It is intended for professionals who have experience in designing and developing data solutions using Salesforce. Salesforce Certified Data Architect certification exam covers a wide range of topics, including data modeling, data architecture, data integration, data storage, and data governance.

Salesforce Certified Data Architect Sample Questions (Q191-Q196):

NEW QUESTION # 191

An Architect needs to document the data architecture for a multi-system, enterprise Salesforce implementation. Which two key artifacts should the Architect use? (Choose two.)

- A. Data model
- B. Non-functional requirements
- C. User stories
- D. Integration specification

Answer: A,D

NEW QUESTION # 192

A company wants to document the data architecture of a Salesforce organization. What are two valid metadata types that should be included? (Choose two.)

- A. RecordType
- B. CustomField
- C. SecuritySettings
- D. Document

Answer: A,B

NEW QUESTION # 193

Universal Containers has a rollup summary field on account to calculate the number of contacts associated with an account. During the account load, Salesforce is throwing an "UNABLE_TO_LOCK_ROW" error. Which solution should a data architect recommend to resolve the error?

- A. Defer rollup summary field calculation during data migration.
- B. Perform a batch job in parallel mode and reduce the batch size.
- C. Leverage Data Loader's platform API to load data.
- D. Perform a batch job in serial mode and reduce the batch size.

Answer: D

Explanation:

According to the Salesforce documentation¹, the "UNABLE_TO_LOCK_ROW" error occurs when a record is being updated or created, and another operation tries to access or update the same record at the same time. This can cause lock contention and timeout issues. To resolve the error, some of the recommended solutions are:

Perform a batch job in serial mode and reduce the batch size (option B). This means running the batch job one at a time and processing fewer records per batch. This can reduce the chances of concurrent updates and lock contention on the same records. Use the FOR UPDATE keyword to lock records in Apex code or API calls. This means explicitly locking the records that are being accessed or updated by a transaction, and preventing other transactions from modifying them until the lock is released. This can avoid conflicts and errors between concurrent operations on the same records².

Defer rollup summary field calculation during data migration (option A). This means disabling the automatic calculation of rollup summary fields on the parent object when child records are inserted or updated. This can improve performance and avoid locking issues on the parent records. However, this option is only available for custom objects, not standard objects³.

Performing a batch job in parallel mode and reducing the batch size (option C) is not a good solution, as it can still cause lock contention and errors if multiple batches try to access or update the same records at the same time. Leveraging Data Loader's platform API to load data (option D) is also not a good solution, as it can still encounter locking issues if other operations are modifying the same records at the same time.

NEW QUESTION # 194

Universal Containers (UC) has 1,000 accounts and 50,000 opportunities. UC has an enterprise security requirement to export all sales data outside of Salesforce on a weekly basis. The security requirement also calls for exporting key operational data that includes events such as file downloads, logins, logouts, etc. Which two recommended approaches would address the above requirement?

- A. Use Field Audit History to capture operational data and extract it to on-premise systems.
- B. Use a custom built extract job to extract operational data to on-premise systems.
- C. Use Weekly Export to extract transactional data to on-premise systems.
- D. Use Event Monitoring to extract event data to on-premise systems.

Answer: C,D

Explanation:

Using Weekly Export to extract transactional data to on-premise systems and using Event Monitoring to extract event data to on-premise systems are two recommended approaches that would address the security requirement of UC. Weekly Export is a built-in

feature that allows UC to download a zip file of their Salesforce data on a weekly basis. Event Monitoring is a tool that allows UC to access detailed information about various events that occur in their Salesforce org, such as logins, logouts, file downloads, etc.

NEW QUESTION # 195

The architect is planning a large data migration for Universal Containers from their legacy CRM system to Salesforce. What three things should the architect consider to optimize performance of the data migration?

Choose 3 answers

- A. Determine if the legacy system is still in use.
- B. **Defer sharing calculations of the Salesforce Org.**
- C. **Deactivate approval processes and workflow rules.**
- D. **Remove custom indexes on the data being loaded.**
- E. Review the time zones of the User loading the data.

Answer: B,C,D

Explanation:

Removing custom indexes on the data being loaded will prevent unnecessary index maintenance and improve the data load speed.

Deferring sharing calculations of the Salesforce Org will avoid frequent sharing rule evaluations and reduce the load time.

Deactivating approval processes and workflow rules will prevent triggering any automation logic that might slow down or fail the data load.

NEW QUESTION # 196

.....

In the current market, there are too many products of the same type. It is actually very difficult to select the Data-Architect practice prep that you love the most with only product introduction. Our trial version of our Data-Architect Study Materials can be a good solution to this problem. For the trial versions are the free demos which are a small of the Data-Architect exam questions, they are totally free for our customers to download.
