That's the reason why we can produce the best CPC-CDE-RECERT exam prep and can get so much praise in the international market..

CyberArk CDE-CPC Recertification Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which statement describes the MFA integration capabilities of CyberArk Privilege Cloud (shared services model) compared to CyberArk PAM Self-Hosted?

- A. CyberArk Privilege Cloud has limited MFA capabilities, whereas CyberArk PAM Self-Hosted offers an extensive range of MFA integration options.
- B. CyberArk Privilege Cloud does not support MFA, while CyberArk PAM Self-Hosted does support a broad band of MFA integrations.
- C. CyberArk Privilege Cloud leverages CyberArk Identity, while CyberArk PAM Self-Hosted needs additional integrations for MFA.
- D. CyberArk Privilege Cloud and CyberArk PAM Self-Hosted offer identical MFA capabilities and integration methods.

Answer: C

Explanation:

In the Privilege Cloud Shared Services model, user access and MFA are driven through CyberArk Identity / Shared Services, and CyberArk publishes a dedicated list of "MFA options in Shared Services" for the user portal and supported challenges.

In CyberArk PAM Self-Hosted, MFA is typically achieved by enabling and integrating additional authentication methods such as RADIUS, SAML, PKI, LDAP, Windows, CyberArk, etc., depending on the organization's design.

So, the accurate comparison is that Privilege Cloud (Shared Services) leverages CyberArk Identity, while PAM Self-Hosted relies on enabling/integrating the relevant authentication/MFA methods in the self-hosted environment # B.

NEW QUESTION # 34

Arrange the steps to install passive CPM using Connector Management in the correct sequence

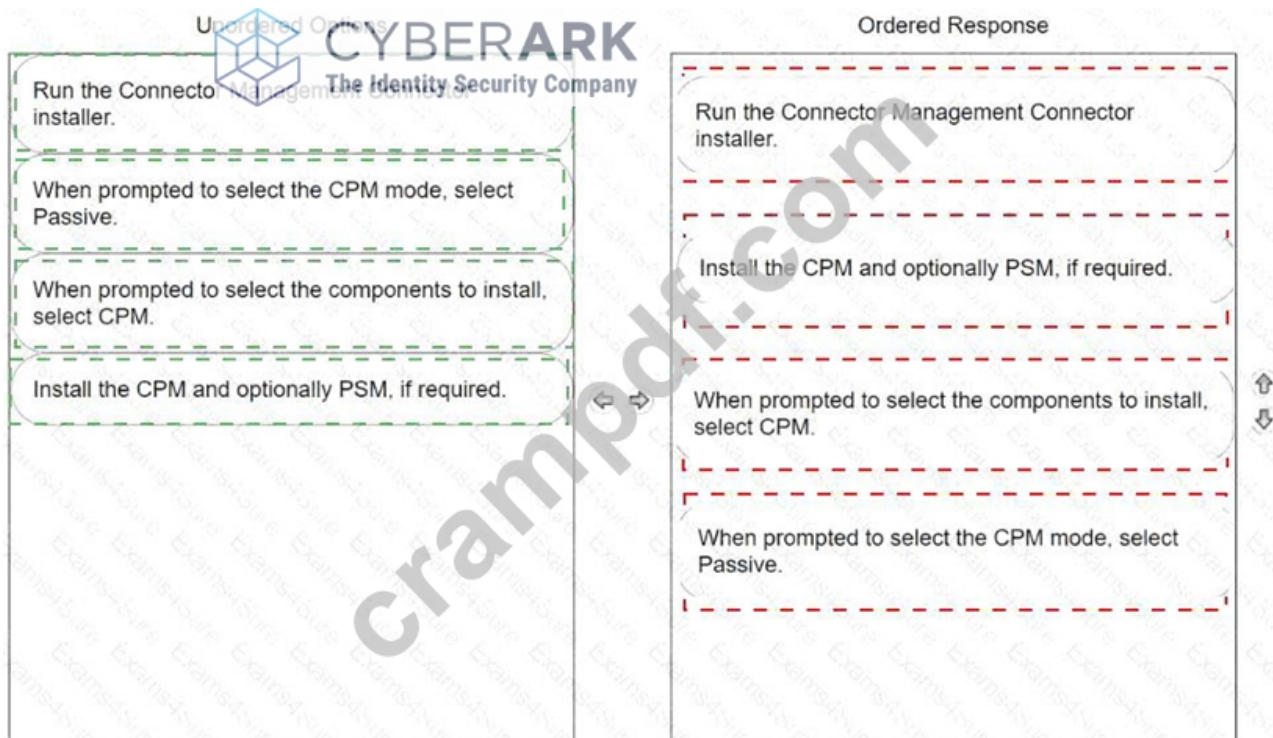

The screenshot shows a drag-and-drop interface for ordering installation steps. On the left, under "Unordered Options", there are four steps in rounded rectangular boxes:

- Run the Connector Management Connector installer.
- When prompted to select the CPM mode, select Passive.
- When prompted to select the components to install, select CPM.
- Install the CPM and optionally PSM, if required.

On the right, under "Ordered Response", there is an empty box for the user to place the steps in the correct sequence. A large watermark "crampdf.com" is overlaid on the interface. At the bottom, the CyberArk logo and "The Identity Security Company" text are visible.

Answer:

Explanation:

Explanation:

- 1-Run the Connector Management Connector installer
- 2-Install the CPM and PSM
- 3-When you are prompted to select the components to install, select CPM.
- 4-When you are prompted to select the CPM mode, select Passive.

NEW QUESTION # 35

Before you can delete a Safe, you must first delete all of its content (accounts and files) permanently. What else must also be achieved before the Safe can be successfully deleted?

- A. The version retention period has expired for all files.
- B. The Safe owners have been removed from the Safe membership.
- C. The associated CPM user has been removed from the Safe.
- D. The "Save account versions for a period of:" has been set to 0 within the Safe version retention settings.

Answer: A

Explanation:

CyberArk states that a Safe can be deleted only after its contents are deleted permanently, and (critically) objects are only deleted permanently after their retention/versions retention has passed. In the Privilege Cloud Safe management documentation, it notes that accounts are deleted permanently only after their retention period has passed, which is why deletion can be blocked by "non-expired" objects.

The underlying Vault/PACLI behavior is also explicit: "It is only possible to delete a Safe after the version retention period has expired for all files contained in the Safe." So, beyond deleting the content, the version retention period must have expired for all files # B.

NEW QUESTION # 36

Before installing the Privilege Cloud Connector using Connector Management, which network rules should be in place?

- A. VaultConnectivity: Privilege Cloud backend Port 1858
TunnelConnectivity: Secure Tunnel Port 5589
- B. VaultConnectivity: Privilege Cloud backend Port 1858
TunnelConnectivity: Secure Tunnel Port 22
CustomerPortalConnectivity: Port 3389

- C. VaultConnectivity: Privilege Cloud backend Port 1858
TunnelConnectivity: Secure Tunnel Port 443
CustomerPortalConnectivity: Port 443
- D. TunnelConnectivity: Secure Tunnel Port 443
CustomerPortalConnectivity: Port 5589

Answer: C

Explanation:

CyberArk's Connector Management prerequisites check defines the exact network connectivity rules that must pass before installation:

* VaultConnectivity # Connect to the Privilege Cloud backend on TCP 1858

* TunnelConnectivity # Connect to the Secure Tunnel on TCP 443

* CustomerPortalConnectivity # Connect to the service backend URL on TCP 443 This matches option A exactly.

NEW QUESTION # 37

Which tool configures the user object that will be used during the installation of the PSM for SSH component?

- A. ConfigureUserPass
- B. CreateUserPass
- C. CreateCredFile
- D. ConfigureCredFile

Answer: C

Explanation:

The tool used to configure the user object for the installation of the PSM for SSH component is CreateCredFile. This tool is responsible for creating a credentials file that stores the necessary user details required during the installation process, ensuring secure and correct authentication.
