

시험준비에 가장 좋은 1z0-1042-24최신시험예상문제모음 인증공부

그 외, ITDumpSKR 1z0-1042-24 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=1MItaJg7la-PgPOQg3C2xM2sPdwiHtZeV>

Oracle 1z0-1042-24인증 시험은 현재IT인사들 중 아주 인기 있는 인증시험입니다. Oracle 1z0-1042-24시험패스는 여러분의 하시는 일과 생활에서 많은 도움을 줄뿐만 아니라 중요한 건 여러분의IT업계에서의 자기만의 자리를 지키실 수 있습니다. 이렇게 좋은 시험이니 많은 분들이 응시하려고 합니다, 하지만 패스율은 아주 낮습니다.

Oracle 1z0-1042-24 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">Creating Orchestrated Integrations: This part of the exam evaluates the candidate's skills in creating and managing orchestrated integrations using OIC. Candidates should be able to manage OIC lookups, use the OIC Data Mapper, and incorporate custom JavaScript libraries into their integrations.
주제 2	<ul style="list-style-type: none">Using OIC Connections & Adapters: Candidates must demonstrate their ability to create and configure OIC connections, including trigger and invoke connections. They should be familiar with the Connectivity Agent, which facilitates on-premises connectivity to OIC services.
주제 3	<ul style="list-style-type: none">Testing, Monitoring, and Troubleshooting Integrations: This section assesses candidates' abilities in testing, monitoring, and troubleshooting integrations within the OIC.
주제 4	<ul style="list-style-type: none">Getting Started with OIC Integrations: This section tests the ability of IT professionals and integration specialists to understand the fundamental components and concepts of Oracle Integration Cloud (OIC). Candidates are expected to describe the key features of OIC integration and explain core integration concepts.
주제 5	<ul style="list-style-type: none">Creating Scheduled Integrations: In this section of the exam, candidates are evaluated based on their skills in managing scheduled integrations. This includes converting scheduled integrations to app-driven integrations and understanding the scheduling options within the OIC.

1z0-1042-24시험패스 가능한 인증공부 & 1z0-1042-24합격보장 가능 시험덤프

Oracle인증 1z0-1042-24덤프로 Oracle시험을 패스,하지 못하셨다고요? 최선을 다했는데도 실패하였다느 말은 영원히 하지마세요. Oracle인증 1z0-1042-24시험을 패스하는 방법은 많고도 많습니다. ITDumpSKR의 Oracle인증 1z0-

1042-24덤프로 시험에 다시 도전해보세요. ITDumpsKR의 Oracle인증 1z0-1042-24덤프는 착한 가격에 100%에 달하는 적중율과 패스율을 보장해드립니다. 시험에서 불합격성적표를 받으시면 덤프구매시 지불한 덤프비용을 환불 처리해드립니다. ITDumpsKR의 Oracle인증 1z0-1042-24덤프로 시험패스를 꿈꿔보세요.

최신 Oracle Cloud 1z0-1042-24 무료샘플문제 (Q32-Q37):

질문 # 32

Which Oracle Integration (OIC) XPath function can be used to retrieve data from an OIC Lookup within the Map Editor?

- A. **lookupValue**
- B. `get-content-as-string`
- C. `getLookup`
- D. `get-value-from-lookup`

정답: A

설명:

Comprehensive and Detailed Explanation:

XPath in Mapper:

* D:True-`lookupValue` retrieves lookup data.

질문 # 33

You can recover unsaved changes in an Oracle Integration Cloud (OIC) integration that crashes during design time because of a browser crash, loss of network connectivity, or a server going down. Which statement is NOT true about the unsaved changes feature in OIC?

- A. Changes made while editing a Connections page cannot be recovered.
- B. A user with the ServiceAdministrator role can unlock an integration that has unsaved changes.
- C. **Changes made while working inside a data mapper cannot be recovered.**
- D. A backup copy is created after each complete task, therefore there is no time limit to logging back in and recovering the changes.
- E. A user with the ServiceAdministrator role can recover the unsaved changes.

정답: C

설명:

Comprehensive and Detailed Explanation:

OIC's unsaved changes feature safeguards design-time work against disruptions. Let's explore each option in detail:

* Option A: A user with the ServiceAdministrator role can recover the unsaved changes.

* True:The ServiceAdministrator role has elevated privileges, including recovering unsaved changes from a crashed session. For example, if a developer's browser crashes mid-flow, an admin can log in, access the integration, and restore the draft. This ensures continuity in team workflows.

* Option B: A user with the ServiceAdministrator role can unlock an integration that has unsaved changes.

* True:If an integration is locked due to a crash (e.g., user session terminates unexpectedly), a ServiceAdministrator can unlock it, allowing recovery or further editing. This is critical in scenarios where a developer leaves an integration in a locked state.

* Option C: Changes made while editing a Connections page cannot be recovered.

* True:OIC's recovery mechanism doesn't extend to the Connections page. Connection edits (e.g., updating credentials) are separate from integration flows and lack the same autosave granularity.

If a crash occurs here, changes are lost, requiring re-entry.

* Option D: Changes made while working inside a data mapper cannot be recovered.

* False (Not True):Mapper changes (e.g., mapping fields between source and target)are recoverable. OIC autosaves mapper edits as part of the integration draft. For instance, if you map

"OrderID" to "PurchaseID" and the browser crashes, logging back in restores this work. This makes D the incorrect statement and the answer.

* Option E: A backup copy is created after each complete task, therefore there is no time limit to logging back in and recovering the changes.

* True:OIC creates backups after significant actions (e.g., adding an action, saving a map). There's no strict time limit for recovery, as drafts persist until overwritten or discarded, offering flexibility post-crash.

Why D is the answer:Mapper changes are integral to integration design and covered by OIC's autosave, unlike Connection edits (C). D's claim contradicts this capability.

Use Case Example: A developer mapping a complex payload in an ERP-to-CRM sync recovers their work after a network drop, proving mapper recovery works.

질문 # 34

The Oracle Integration Cloud (OIC) integration designer editor provides a data mapper UI tool that is available for Map actions. Which statements are TRUE regarding the use of the Mapper tool? Select TWO.

- A. You cannot drag and drop an XPath function activity directly to a target node element.
- B. You cannot drag and drop a source data element to a target node element that is already mapped.
- C. You cannot drag and drop an XSLT flow control statement directly to a target node element.
- D. You can drag and drop a source data element to multiple target node elements.

정답: C,D

설명:

Comprehensive and Detailed Explanation:

OIC's Data Mapper simplifies transformations. Let's evaluate each option:

- * Option A: You cannot drag and drop an XSLT flow control statement directly to a target node element.
- * True: XSLT flow controls (e.g., `<xsl:for-each>`) require manual coding in an external editor for advanced mappings. OIC's UI doesn't support dragging these directly; you must export the map, edit the XSLT, and reimport it. This limitation ensures simplicity in the UI while allowing power users flexibility.
- * Option B: You can drag and drop a source data element to multiple target node elements.
- * True: The mapper allows one-to-many mappings. For example, dragging "CustomerName" from the source to both "BillingName" and "ShippingName" in the target is supported, streamlining repetitive mappings.
- * Option C: You cannot drag and drop a source data element to a target node element that is already mapped.
- * False: You can overwrite an existing mapping by dragging a new source element to a mapped target, replacing the prior link. This flexibility aids iterative design.
- * Option D: You cannot drag and drop an XPath function activity directly to a target node element.
- * False: XPath functions (e.g., `concat()`) can be dragged from the function palette to a target node, applying transformations directly. This enhances usability.

Why A and B: A reflects a UI constraint, and B showcases mapping flexibility, both accurate per OIC's mapper design.

Use Case Example: Mapping "OrderDate" to multiple date fields in a CRM sync, then using `current-date()` in the mapper, demonstrates B and D's capabilities.

질문 # 35

There are use cases in which you need to perform an advanced XSLT task that you cannot perform in the Oracle Integration Cloud (OIC) data mapper. To perform the advanced mapping tasks, you decide to use an external XSLT mapper and then import the .xsl file back to your integration. What is NOT a valid consideration when handling this use case?

- A. The exported archive must be imported into an Oracle Service Bus project in JDeveloper.
- B. You must export the entire integration that contains one or more .xsl files.
- C. The exported archive file can include a map file that is largely complete in content or a map file that is empty of content.
- D. Once the advanced mapping is complete, you must import the entire integration that contains the updated .xsl files.

정답: A

설명:

Comprehensive and Detailed Explanation:

Advanced XSLT in OIC requires external tools. Let's analyze:

- * A: True - exported maps can be complete or empty templates.
- * B: False - not required; XSLT can be edited in any editor and reimported directly.
- * C: True - entire integration must be reimported with updated XSLT.

질문 # 36

Which JNDI name value must be provided when configuring the properties of a new database adapter outbound connection pool to support dependent SOA composite applications?

- A. The associated XA database adapter plan deployed with this database adapter outbound connection pool.
- **B. The corresponding XA datasource configuration deployed to the same WebLogic cluster.**
- C. The defined XA database adapter connection factory configured for this WebLogic domain.
- D. The corresponding XA enterprise resource adapter application deployed to the same WebLogic cluster.

정답: **B**

설명:

The correct JNDI name value for the database adapter outbound connection pool is the JNDI name of the corresponding XA datasource configuration deployed to the WebLogic cluster. This ensures that the SOA composite application can access the required database resources.

질문 #37
