## Microsoft GH-100 Exam | Practice GH-100 Questions - Excellent Website for GH-100: GitHub Administration Exam

In order to serve you better, we have a complete system for you if you choose us. We offer you free demo for GH-100 exam materials for you to have a try, so that you can have a better understanding of what you are going to buy. If you are quite satisfied with GH-100 exam materials and want the complete version, you just need to add them to cart and pay for it. You can receive the download link and password within ten minutes for GH-100 Training Materials, and if you don't receive, you can contact with us, and we will solve the problem for you. We also have after-service stuff, if you have any questions about GH-100 exam materials, you can consult us.

### Microsoft GitHub Administration Sample Questions (Q47-Q52):

#### NEW QUESTION # 47

You are planning GitHub account management for a healthcare organization with strict compliance requirements. Which THREE of the following statements accurately describe GitHub Enterprise Managed Users (EMU) accounts? (Choose three.)

- A. EMU accounts can be used for both personal and enterprise repositories.
- B. EMU accounts are created and managed by individual users.
- C. EMU accounts are managed through an identity provider such as Azure AD.
- D. EMU accounts are owned by the organization and cannot be unlinked.
- E. EMU accounts allow users to create and manage their own credentials.

- F. EMU accounts restrict users to enterprise-related activities only

**Answer: C,D,F**

Explanation:

Enterprise Managed User accounts are provisioned and authenticated exclusively through your identity provider (for example, AzureAD), so the IdP handles their creation, attribute updates, and deprovisioning.

Managed user accounts cannot create public content or interact with repositories outside your enterprise; they're confined to private and internal repos within the enterprise.

EMU accounts are owned and controlled by the enterprise (via the IdP) and cannot be converted into or unlinked as personal accounts outside that enterprise.

#### NEW QUESTION # 48

You are using GitHub-hosted runners and need to securely deploy to an internal system. The security team requires that these runners use IP address ranges that would not be shared with other companies. Which of the following approaches would meet their requirements?

- A. GitHub-hosted larger runners with Azure private networking
- B. GitHub-hosted larger runners with static IP addresses
- C. GitHub-hosted standard runners, using the IP addresses provided in "api" from <https://api.github.com/meta>
- D. GitHub-hosted standard runners, using the IP addresses provided in "actions" from <https://api.github.com/meta>

**Answer: B**

Explanation:

GitHub's larger runners let you reserve dedicated static IP addresses for your workflows - so you can allow-list those IPs in your firewall and be sure they aren't shared with any other tenant.

#### NEW QUESTION # 49

What is the potential consequence of enabling multiple rulesets that apply to the same branch in a repository?

- A. Rulesets will override each other, leading to unpredictable behavior
- B. Only organization-level rulesets are enforced over repository-level ones
- C. Only the most recently created ruleset will be enforced
- D. All applicable rulesets will be evaluated, and their combined rules enforced

**Answer: D**

Explanation:

If you enable multiple rulesets that target the same branch, GitHub will evaluate every matching ruleset and enforce the aggregate of their rules - so all constraints from all applicable rulesets apply.

#### NEW QUESTION # 50

Which of the following accurately contrasts a GitHub App and a GitHub Action?

- A. GitHub Actions can only be used to respond to events within a single repository while GitHub Apps can respond to events from multiple repositories
- B. GitHub Apps run only on GitHub-provided virtual machines, while GitHub Actions run only on customer-hosted machines
- C. GitHub Apps can only be used inside `.github/workflows`
- D. GitHub Actions are limited to reading repository content only

**Answer: A**

Explanation:

GitHub Actions workflows are defined and triggered within a single repository's context, whereas GitHub Apps are installed at the organization or user level and can subscribe to events across multiple repositories.

## NEW QUESTION # 51

Why would a GitHub App be favored over a machine account for automation tasks?

- A. GitHub Apps provide a higher rate limit ceiling than using a personal access token on a machine account, when they use an install token and are owned by a GitHub Enterprise Cloud licensed enterprise.
- B. Machine accounts are easier to audit than GitHub Apps.
- C. GitHub Apps are limited to a single repository.
- D. Machine accounts are required for webhook delivery.

**Answer: A**

Explanation:

GitHub Apps authenticate with short-lived installation tokens scoped to fine-grained permissions and, when owned by a GitHub Enterprise Cloud organization, enjoy a higher rate limit (15,000 requests/hour) compared to a machine account's personal access token.

## NEW QUESTION # 52

.....

The most interesting thing about the learning platform is not the number of questions, not the price, but the accurate analysis of each year's exam questions. Our GH-100 guide dump through the analysis of each subject research, found that there are a lot of hidden rules worth exploring, this is very necessary, at the same time, our GH-100 training materials have a super dream team of experts, so you can strictly control the proposition trend every year. In the annual examination questions, our GH-100 study questions have the corresponding rules to summarize, and can accurately predict this year's test hot spot and the proposition direction. This allows the user to prepare for the test full of confidence.
