SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q27-Q32):

NEW QUESTION # 27
What is the main storage type of the object store in SAP Business Data Cloud?

- A. SAP HANA extended tables
- B. SAP BW/4HANA InfoObjects
- C. SAP HANA data lake files
- D. SAP BW/4HANA DataStore objects (advanced)

Answer: C

Explanation:
The primary storage type for the object store within the SAP Business Data Cloud (BDC) architecture is SAP HANA data lake files. SAP BDC is designed to handle vast amounts of diverse data, including semi-structured and unstructured data, which is efficiently stored in a data lake. The SAP HANA data lake, specifically its file storage component, provides a highly scalable and cost-effective solution for retaining raw, historical, and detailed data. This contrasts with traditional relational databases (like SAP HANA extended tables) or data warehousing constructs (like BW/4HANA DataStore objects or InfoObjects), which are optimized for structured, aggregated data and specific query patterns. The object store's reliance on data lake files in BDC underscores its capability to manage enterprise-wide data regardless of its structure, making it suitable for a wide range of analytical workloads, including those involving machine learning and advanced analytics where raw data access is crucial.

NEW QUESTION # 28
What source system can you connect to with an SAP Analytics Cloud live connection that is provided by SAP BDC?

- A. SAP SuccessFactors
- B. SAP Datasphere
- C. SAP Business ByDesign Analytics
- D. SAP ERP

Answer: B

Explanation:
Within the context of SAP Business Data Cloud (BDC), the primary and most central source system for an SAP Analytics Cloud (SAC) live connection is SAP Datasphere. SAP Datasphere serves as the comprehensive data foundation for SAP's business data fabric, integrating data from various SAP and non-SAP sources, and providing a harmonized, semantically rich data layer. SAP BDC is built upon and extends the capabilities of SAP Datasphere, making it the strategic hub for analytics and data management. Therefore, to ensure data consistency, governance, and real-time access to the integrated and harmonized business data managed within the BDC ecosystem, SAP Datasphere is the recommended and primary live connection source for SAC. While SAC can connect to other SAP systems like S/4HANA or BW, within the specific architecture of SAP BDC, SAP Datasphere plays the pivotal role as the integrated data platform.
