Dump ACD201 File, ACD201 Real Brain Dumps

After the user has purchased our ACD201 learning materials, we will discover in the course of use that our product design is extremely scientific and reasonable. Details determine success or failure, so our every detail is strictly controlled. For example, our learning material's Windows Software page is clearly, our ACD201 Learning material interface is simple and beautiful. There are no additional ads to disturb the user to use the Appian Senior Developer qualification question. Once you have submitted your practice time, ACD201 study tool system will automatically complete your operation.

Appian Senior Developer Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which two options are correct regarding record relationships when using synced records in your application?
(Choose two.)

- A. Record type relationships enforce referential integrity.
- B. Relationships can be established between any record types that have sync enabled, regardless of the source.
- C. Up to 20 relationships can be added on a record type with data sync enabled.
- D. Many-to-one relationships can be established using record relationships.

Answer: C,D

Explanation:

Many-to-one relationships can be established between record types using record relationships.

Up to 20 relationships can be added to a record type with data sync enabled, according to Appian platform limits.

NEW QUESTION # 40

You need to relate two entities, Employee and Skill, in the data structure. You want to adhere to Appian best practices.

Employees can have multiple skills, and a single skill can relate to multiple employees.

What type of relationship do these entities represent, and what is the minimum number of tables required to implement the design?

- A. One-to-many; 2 tables
- B. Many-to-many; 3 tables
- C. Many-to-many; 2 tables

Answer: B

Explanation:

The relationship between Employee and Skill is many-to-many - an employee can have multiple skills, and each skill can belong to multiple employees.

To model this properly and according to Appian best practices, you need 3 tables:

Employee table

validtorrent.com

appian

Skill table

validtorrent.com

appian

EmployeeSkill (junction/association) table - contains foreign keys referencing both Employee and Skill to manage the many-to-many relationship.

NEW QUESTION # 41

You're creating an application which has integrations with multiple systems using different protocols.

Match each process model component or node to the appropriate protocol.

Note: Each protocol will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

The screenshot shows three smart service nodes in an Appian process model, each with a dropdown menu for selecting a protocol. The protocols available are REST, SOAP, and SMTP.

- Call Web Service smart service**
Select a match:
REST
SOAP
SMTP
- Start event and a receive message trigger**
Select a match:
REST
SOAP
SMTP
- Call Integration smart service**
Select a match:
REST
SOAP
SMTP

Answer:

Explanation:

□

NEW QUESTION # 42

You're building an application with a review workflow.

Each submission must be approved by three users who can each approve or reject their request, and leave a comment. This action changes the status of the submission to 'Approved' or 'Rejected' correspondingly, and pushes the review to the previous or next assignee.

Which data model captures the workflow requirements appropriately?

- A. Two tables:
Review with columns id, statusId, comment, user
RefStatus with columns id, value
- B. Three tables:
Review to store id, statusId, comment
RefStatus with columns id, value
Review User with columns id, reviewId, user
- C. Two tables:
Review with columns id, statusId, comment, user1, user2, user3
RefStatus with columns id, value

Answer: B

Explanation:

Using three tables - Review, RefStatus, and Review User - enables you to track each user's approval or rejection, comments, and status changes for each review, supporting a flexible, normalized workflow for multiple reviewers.

NEW QUESTION # 43

You need to configure a process model that runs every day at 10:00 AM. The process should start only at the specified time even when a newer version of the process model is published.

A Boolean type constant needs to be configured in the process model. The intended flow of the process should be executed only when the constant is True.

Which three steps should you perform? (Choose three.)

- A. Add a timer event just after the start node to check for the specific time.
- B. Add an expression-based condition in the start node timer event to check for the constant to be True.
- C. Add a timer event in the start node.
- D. Add a XOR Gateway just after the start node to check for the constant to be True.
- E. Add an expression-based condition in the start node timer event to check for the specific time.

Answer: C,D,E

Explanation:

Add a timer event in the start node to schedule the process to start at 10:00 AM every day.

Add a XOR Gateway after the start node to check the Boolean constant and control the flow based on its value.

Add an expression-based condition in the start node timer event to ensure the process starts only at the specified time.

NEW QUESTION # 44

.....

This kind of prep method is effective when preparing for the Appian ACD201 certification exam since the cert demands polished skills and an inside-out understanding of the syllabus. These skills can be achieved when you go through intensive Appian ACD201 Exam Training and attempt actual Appian ACD201.
