Everything is changing so fast. So do not reject challenging new things. Our CCSP study materials absolutely can add more pleasure to your life. You just need a chance to walk out. You can click to see the comments of the CCSP exam braindumps and how we changed their life by helping them get the CCSP Certification. And you can also see the pass rate of our CCSP learning guide high as 98% to 100%, we can give you a promising future.

The CCSP Certification is offered by (ISC)², an international non-profit organization that specializes in information security education and certifications. The CCSP exam covers six domains, including cloud concepts, architecture and design, data security, compliance, operations, and legal and regulatory issues. It is intended for professionals with at least five years of experience in IT, including three years in information security and one year in cloud security. Certified Cloud Security Professional certification is valid for three years, after which it must be renewed by completing continuing education requirements or retaking the exam.

Our desktop software also tracks your progress, and identifies your strengths and weaknesses, to ensure you're getting the best possible experience for the CCSP Exam. All features of the web-based version are available in the desktop software. But the desktop software works offline and only on Windows computers.

ISC CCSP (Certified Cloud Security Professional) certification exam is a globally recognized certification that validates an individual's expertise in cloud security. CCSP exam is designed to test the knowledge and skills required to secure data, applications, and infrastructure in the cloud. It is an ideal certification for professionals who are responsible for managing and securing cloud environments.

The field of cloud computing has exploded in recent years, and with it has come a need for security professionals who can ensure that data and applications are kept safe in the cloud. The ISC CCSP (Certified Cloud Security Professional) Exam is a certification designed for professionals who are seeking to demonstrate their expertise in cloud security. CCSP exam covers a wide range of topics related to cloud security, including architecture, design, operations, and maintenance.

ISC Certified Cloud Security Professional Sample Questions (Q277-Q282):

NEW QUESTION # 277

The BIA can be used to provide information about all the following, except:

- **A. Secure acquisition**
- B. BC/DR planning
- C. Selection of security controls
- D. Risk analysis

Answer: A

Explanation:

Explanation/Reference:

Explanation:

The business impact analysis gathers asset valuation information that is beneficial for risk analysis and selection of security controls (it helps avoid putting the ten-dollar lock on the five-dollar bicycle), and criticality information that helps in BC/DR planning by letting the organization understand which systems, data, and personnel are necessary to continuously maintain. However, it does not aid secure acquisition efforts, since the assets examined by the BIA have already been acquired.

NEW QUESTION # 278

Static software security testing typically uses _____ as a measure of how thorough the testing was.

Response:

- A. Flaws detected
- B. Malware hits
- **C. Code coverage**
- D. Number of testers

Answer: C

NEW QUESTION # 279

Cryptographic keys should be secured _____ .

- A. With two-person integrity
- **B. To a level at least as high as the data they can decrypt**
- C. By armed guards
- D. In vaults

Answer: B

Explanation:

The physical security of crypto keys is of some concern, but guards or vaults are not always necessary.

Two-person integrity might be a good practice for protecting keys. The best answer to this question is option B, because it is always true, whereas the remaining options depend on circumstances.

NEW QUESTION # 280

Which SSAE 16 audit report is simply an attestation of audit results?

- A. SOC 2, Type 2
- **B. SOC 3**
- C. SOC 1
- D. SOC 2, Type 1

Answer: B

NEW QUESTION # 281

What is a serious complication an organization faces from the compliance perspective with international operations?

- A. Different operational procedures
- B. Different capabilities
- **C. Multiple jurisdictions**
- D. Different certifications

Answer: C

Explanation:

When operating within a global framework, a security professional runs into a multitude of jurisdictions and requirements, which often may not be clearly applicable or may be in contention with each other. These requirements can involve the location of the users and the type of data they enter into systems, the laws governing the organization that owns the application and any regulatory requirements they may have, and finally the appropriate laws and regulations for the jurisdiction housing the IT resources and where the data is actually stored, which may be multiple jurisdictions as well. Different certifications would not come into play as a challenge because the major IT and data center certifications are international and would apply to any cloud provider. Different capabilities and different operational procedures would be mitigated by the organization's selection of a cloud provider and would not be a challenge if an appropriate provider was chosen, regardless of location.
