- **B. Allow UDP ports 5246 and UDP port 5247 on the firewall.**
- C. Block UDP ports 1812 and 1813 on the firewall.
- D. Configure a static IP on the OEAP 1810.
- **E. Allow UDP ports 12222 and 12223 on the firewall.**

Answer: B,E

Explanation:

To ensure the 1810 OEAP can join the controller from remote teleworker locations, the firewall must allow specific UDP ports that

are used for AP communication with the controller. UDP ports 5246 and 5247 are used for Control and Provisioning of Wireless Access Points (CAPWAP) control and data messages, while UDP ports 12222 and 12223 are used for OfficeExtend APs' data traffic. Blocking these ports would prevent the APs from joining the controller, hence they must be allowed on the firewall.
