Topic 4	• Understand ChromeOS tenets: It discusses ChromeOS best practices and customers on chromeOS tenets.
Topic 5	• Understand ChromeOS security processes: It focuses on deploying certificates and uChromeOS policies.

Google Professional ChromeOS Administrator Exam Sample Questions (Q116-Q121):

NEW QUESTION # 116

A new startup company wants to order Chromebooks for their developers. They will use virtual machines on these Chromebooks for development tasks.

Which minimum configuration should an admin recommend?

- A. Intel i5, 8GB RAM and 128 GB SSD
- B. Intel i3, 4GB RAM and 128 GB SSD
- C. Intel i7, 8GB RAM and 256 GB SSD
- D. Intel i3, 16GB RAM and 256 GB SSD

Answer: A

Explanation:

Developers often require sufficient processing power and memory to run virtual machines efficiently.

ChromeOS supports Linux (via Crostini) and VM environments that typically benefit from at least an Intel i5 processor and 8GB of RAM to handle development environments and containerized applications.

Verified Answer from Official Source:

The correct answer is verified from the ChromeOS System Requirements for Developers, which recommends a minimum of an Intel i5 processor and 8GB RAM for development tasks, particularly when running Linux applications or virtual machines.

"For developers using VMs or Linux on ChromeOS, it is recommended to use devices with at least an Intel i5 processor and 8GB RAM for optimal performance." The combination of an i5 processor and 8GB RAM provides enough processing power and memory to run VMs without significant lag, balancing performance and cost.

Objectives:

* Select suitable hardware for development tasks.

* Ensure compatibility with virtual machines on ChromeOS.

NEW QUESTION # 117

As a ChromeOS Administrator, you have been asked to enroll all of your devices into a specific device OU using Zero-Touch Enrollment (ZTE). What are the next steps?

- A. Use a dedicated ZTE Admin account for device enrollment
- B. Generate a ZTE pre-provision enrollment token directly for your domain root OU
- C. Give the company domain name to your Chrome Partner to enable ZTF
- D. Generate a ZTE pre-provision enrollment token for your specified user OU
- E. Generate a ZTE pre-provision enrollment token for your specified device OU

Answer: C,E

Explanation:

* Generate a ZTE pre-provision enrollment token for your specified device OU: This token associates devices with the specific organizational unit (OU) during enrollment, allowing for easier management and policy application.

* Give the company domain name to your Chrome Partner to enable ZTF: This enables the Zero-Touch Framework, allowing devices to be automatically enrolled as soon as they connect to the internet.

Why other options are incorrect:

* C (Generate token for root OU): While possible, it's not ideal as it doesn't allow for granular control over different device groups.
* D (Generate token for user OU): Zero-Touch Enrollment is specifically for devices, not users.
* E (Use dedicated admin account): While recommended for security, it's not a mandatory step for ZTE.

NEW QUESTION # 118
You need to get to the enterprise enrollment screen. What should you do?

* A. Press Ctrl-Alt-E during the Chrome bootup sequence (Chrome logo animation)
* B. Sign in with enterprise enrollment credentials provided by the customer at the user sign-in screen
* C. Press Ctrl-Alt-E at the user login screen before any user has signed in to the device
* D. Press Ctrl-Alt-F on the initial welcome screen to set initial settings

Answer: A

Explanation:
* Power on or reboot the Chromebook.
* Watch for the Chrome logo animation. This is the key moment to trigger enterprise enrollment.
* Press Ctrl+Alt+E simultaneously. This keyboard shortcut interrupts the normal boot process and redirects the Chromebook to the enterprise enrollment screen.
* Follow the on-screen instructions. You'll be prompted to enter information such as the domain name of the organization and enrollment credentials.
Why this is the correct method:
* Enterprise Enrollment Timing: The Ctrl+Alt+E shortcut is specifically designed to be used during the bootup sequence, before any user profile is loaded. This ensures the device is enrolled in the organization's management system from the start.
* Alternative Options: The other options mentioned are incorrect:
* B (Sign in with credentials): This assumes the device is already enrolled and is used for regular user login.
* C (Ctrl+Alt+F): This shortcut is used for accessing the ChromeOS developer shell (Crosh) and is not related to enrollment.
* D (Ctrl+Alt+E at login): While technically possible to enroll at the login screen, it's not the recommended method as it might not apply settings correctly to all user profiles.

NEW QUESTION # 119
You have Long-term Support enabled for all devices within a particular OU. How often will these devices receive a feature update?

* A. 4 months
* B. 8 months
* C. 6 months
* D. 2 months

Answer: C

Explanation:
ChromeOS devices configured for Long-term Support (LTS) receive feature updates every 6 months. LTS is designed for organizations that require stability and predictability in their device environment, minimizing disruptions caused by frequent updates.
Verified Answer from Official Source:
The correct answer is verified from the ChromeOS Long-Term Support (LTS) Policy Documentation, which clearly states that updates under LTS are delivered every 6 months.
"LTS updates are released approximately every 6 months, providing stability and minimizing changes while maintaining security updates." LTS is ideal for educational institutions and enterprises that prioritize stability over cutting-edge features, as it reduces the frequency of significant changes.
Objectives:
* Manage ChromeOS updates efficiently.
* Implement Long-term Support policies.

NEW QUESTION # 120
Your organization's security protocols require you to ensure that any unattended devices log the user out after
24 hours. You have 1000 ChromeOS devices to manage. How would you Implement this with the least amount of admin effort?

- A. Enable the "User and Browser Settings" and update "Maximum user session length" to any time up to 24 hours
- B. Force-install a custom app to each device in question that notifies the user that they need to sign out of their device after 24 hours
- C. Create a corporate policy stating (he users are to manually sign out after the end of every shift
- D. You can remotely access each device and sign out of the user account using Chrome Remote Desktop

Answer: A

Explanation:
This is the most efficient method as it applies the setting to all devices within the organizational unit (OU) through a single policy change in the Admin console.
The other options are less efficient:
* Corporate policy:Relies on user compliance and is difficult to enforce.
* Chrome Remote Desktop:Requires manual intervention for each device.
* Custom app:Adds complexity and potential security risks.

NEW QUESTION # 121

......

Furthermore, applicants spend much time searching for Professional ChromeOS Administrator Exam ChromeOS-Administrator Dumps updated study material, or they waste time using outdated practice material. During Google Professional ChromeOS Administrator Exam exam preparation, every second is valuable. If you prepare with our Professional ChromeOS Administrator Exam ChromeOS-Administrator Actual Dumps, we ensure that you will become capable to crack the Professional ChromeOS Administrator Exam ChromeOS-Administrator test within a few days. The Professional ChromeOS Administrator Exam ChromeOS-Administrator price is affordable.
