Magnificent MB-500 Preparation Dumps: Microsoft Dynamics 365: Finance

and Operations Apps Developer Represent the Most Popular Simulating Exam - Itexamguide

We aim to provide our candidates with real Microsoft vce dumps and learning materials to help you pass real exam with less time and money. Our valid MB-500 top questions are written by our IT experts who are specialized in MB-500 Study Guide for many years and check the updating of MB-500 vce files everyday to make sure the best preparation material for you.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q168-Q173):

NEW QUESTION # 168

You are a Dynamics 365 Finance and Operations developer.

You have a form that displays customer records by using a listpage control. You must add related sales total information for the selected customer to the form.

You need to display the required related sales total information.

What should you add to the form?

- A. a tile
- **B. a factbox**
- C. an external feed
- D. a custom lookup
- E. a quick filter

Answer: B

Explanation:

Explanation

Explanation:

A list page presents a set of data on a user interface that is optimized so that you can browse records, find the right record, and then take an action upon that record. The list page lets the user search, filter, and sort the data. FactBoxes on the right side of the grid show related data for the active record.

NEW QUESTION # 169

You need to deploy the web portal integration solution.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Add the package to source control and check in changes.

Build and create a deployment package.

Import the model into a Development environment.

Synchronize the models in the Developer environment by using **Get latest** feature.

Import the model into the Build environment.

Import the model into a QA environment.

Import the deployment package in another development environment.

Answer Area

Answer:

Explanation:

Actions

Add the package to source control and check in changes.

Build and create a deployment package.

Import the model into a Development environment.

Synchronize the models in the Developer environment by using **Get latest** feature.

Import the model into the Build environment.

Import the model into a QA environment.

Import the deployment package in another development environment.

Answer Area

Add the package to source control and check in changes.

Import the model into a Development environment.

Synchronize the models in the Developer environment by using **Get latest** feature.

Build and create a deployment package.

NEW QUESTION # 170

A company plans to migrate purchase orders from an older system into Dynamics 365 Finance.

You need to generate field mapping between the source and the target data structures.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Create this type of project in the data management workspace:

Open the project and select:

Select this UI option:

Microsoft

Answer:

Explanation:

Create this type of project in the data management workspace:

Open the project and select:

Select this UI option:

Microsoft

NEW QUESTION # 171

You need to implement the integration for the Vendor Exclusion List form.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Element	Option
Element to add to project	▼ Table extension Data Entity View Query
Key type to create	▼ Unique key Foreign key
Action to perform	▼ Build the project. Build and synchronize the database. Build the solution.

Answer:

Explanation:

Element	Option
Element to add to project	▼ Table extension Data Entity View Query
Key type to create	▼ Unique key Foreign key
Action to perform	▼ Build the project. Build and synchronize the database. Build the solution.

Explanation

Element	Option
Element to add to project	▼ Table extension Data Entity View Query
Key type to create	▼ Unique key Foreign key
Action to perform	▼ Build the project. Build and synchronize the database. Build the solution.

Box 1: Table extension

Isolate all new vendor exclusion codes as a new assembly by creating a table named VendExclusions.

Implement the Excel integration for the Vendor Exclusion List form.

The table extension object allows you to add additional fields or to change some properties on a table provided by the Dynamics 365 Business Central service. In this way, you can add data to the same table and treat it as a single table.

Box 2: Unique key

Create an index for the table named PrimaryIdx that uses the following fields: CustAccount, ItemId, VendAccount.

Box 3: Build and synchronize the database.

A project property lets you specify that the synchronize operation for the database should be performed every time that you build the project. This can be useful when you're making changes to the table structure for an application. Each time that you build, you will know that the database is synchronized with the tables as they are defined in the project.

Reference:

<https://docs.microsoft.com/en-us/dynamics365/business-central/dev-itpro/developer/devenv-table-ext-object>

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/dev-tools/build-operations#synchronizing>

NEW QUESTION # 172

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You must create a new attribute class in which to mark other classes in the ISV solution and their respective methods with the error levels Warning and Error. You have the following class: the numbers are included for reference only.)

```

01
02 public class Vehicle
03 {
04     Microsoft
05     public int bike()
06     {
07     }
08     public int assemble()
09     {
10     }
11     public int bicycle()
12     {
13     }
14 }

```

You need to ensure that the compiler will report an error if code calls the bike method.

Solution:

Create the following attribute class:

Microsoft
extends SysAttribute

```
[SysObsoleteAttribute("Deprecated. Please use the bicycle class instead.", false)]
```

- Answer: B**
